

Geography

Contents

Introduction: Approaches to Geography	1
PART ONE <i>Describing the Landscape</i>	
1 Contrasts in the Landscape	7
Landscape evolution. Man-land relationships and landscape systems. Changes in the man-environment relationship.	
2 Resources, Regions, Nodes and Networks	19
Classification of resources. Resource assessment. Types of region. Patterns of nodes. Networks in the landscape. Relationships of regions, nodes and networks.	
3 Landscape Processes and Environmental Systems	33
The speed of landscape change. Four major environmental systems. An alternative classification of environmental systems.	
PART TWO <i>Tools of the Geographer</i>	
4 Maps	59
Specific and relative locations. Topographic maps. Thematic maps. Recent developments in map making.	
5 Air Photographs and Remote Sensing	70
Origins and types of air photography. Air photograph interpretation. Stages in interpretation. Satellite images.	
6 Surveys	81
Types of survey. Population censuses. Sampling	

methods. Sample size. Economic surveys. Survey analysis.

PART THREE *Patterns in the Landscape*

- | | | |
|-----------|---|------------|
| 7 | World Distributions | 95 |
| | Patterns of world climate. Climatic types based on air masses. Patterns of world vegetation. Patterns of vegetation productivity. World population patterns. World patterns of wealth. | |
| 8 | Associations Amongst Distributions | 113 |
| | Measures of economic development. A statistical measure of association. Types of agriculture. Environmental associations in arid regions. Agriculture in arid North Africa. | |
| 9 | World Flows | 130 |
| | Movement of ocean currents. Intercontinental population migration. Settlement resulting from migration. Types of population interaction. World trade flows. | |
| 10 | Patterns of Regions | 143 |
| | Urban land-use patterns. Generalisations of urban land-use patterns. Land capability regions. Sequences of slope form. The creation of simple models. | |
| 11 | Patterns of Points | 154 |
| | Industrial location. Raw materials and energy costs. Capital costs. Labour costs. Transport costs. The influence of the market on industrial location. Governmental influences. Central place theory. Patterns and types of volcanic activity. Intrusive volcanic activity. | |

PART FOUR *Explaining the Landscape*

- | | | |
|-----------|--|------------|
| 12 | Cycles | 177 |
| | The annual energy cycle. Environmental nutrient cycles. Rice growing as a seasonal cycle. Market cycles. The cycles of poverty and growth. | |

13	Stages	192
	Stage models of economic development. The Von Thünen model of agricultural land use. Land forms of mountain glaciations. Features of lowland glaciation. Stage models of contrasting length.	
14	Diffusion	211
	Types of diffusion. Barriers to diffusion. The diffusion curve. Two examples of diffusion.	
15	Events	223
	Earthquakes. Floods. Government decisions. Events, cycles and stages.	
16	Man's Ability to Initiate Landscape Change	236
	Technology's impact on the environment. Water pollution. Atmospheric pollution. Pollution in an ecosystem.	
17	Man's Ability to Control Landscape Change	248
	Land-use planning policies. Flood control policies. Landscape policies in the Third World. The need for accurate forecasting.
