Part I Aspects of the Climatic System 1

<i>Chapter 1 The general atmospheric circulation</i>	1
1 The climatic system	1
1.1 Isolated, closed and open systems	1
Isolated systems	1
Open systems	1
1.2 Cascading systems and the atmosphere	2
1.3 Physical components	3
1.4 Further development	4
2 Driving Forces	4
2.1 Radiation distribution	5
Global radiation	5
Albedo	5
Radiation balance	8
2.2 The earth's rotation	8
Baroclinic instability	11
3 General Atmospheric Circulation	11
3.1 The mean meridional circulation	11
3.2 The subtropical jetstreams	12
4 Tropical circulation patterns	13
4.1 The trade winds	13
4.2 The equatorial trough	14
4.3 The Walker circulation and the southern oscillation	14
4.4 Monsoon climates of southern Asia	15
5 Middle and high latitude circulation patterns	17
5.1 Atmospheric thermal patterns	18
5.2 Index cycles and blocking systems	22
5.3 Polar regions	24
6 Circulation of energy in the atmosphere	24
6.1 Energy content	24
6.2 Energy transport	25
7 Geological evolution of the general atmospheric circulation	30
7.1 Changes in solar luminosity	30
7.2 Albedo	30
7.3 Greenhouse effect	31

7.4 Computational results	32
References	33

Chapter 2 Oceanic Subsystems 35

1 Ocean circulation patterns	35
2 The atmosphere-ocean interface	37
3 Tropical and equatorial oceans	44
4 Tropical oceanic weather systems	45
4.1 Subtropical anticyclones	45
4.2 The trade winds	45
4.3 The equatorial trough	46
4.4 Tropical rain-forming disturbances	47
4.5 Easterly waves	48
4.6 Tropical storms and cyclones	51
5 Temperate oceanic weather systems	54
5.1 Extratropical cyclones	55
5.2 Precipitation and continentality over temperate oceans	56
6 Polar oceans	59
7 Atmosphere-ocean interactions	62
7.1 Ocean surface temperature anomalies and climate	62
7.2 Influence of the atmosphere on the ocean	63
7.3 Effect of the ocean on the atmosphere	64
7.4 The southern oscillation and El Niño	65
References	68

Chapter 3 Glacial Subsystems 73

1 Polar climates	75
1.1 Radiation and temperature	75
1.2 Inversions	86
1.3 Surface temperatures	86
1.4 Snow cover, precipitation and water balance	87
2 Physics of large ice-sheets	88
3 Snow and ice on mountains	89
3.1 Present day snow-balance in Britain	90
4 The history of ice ages through geological time	95
4.1 PreCambrian glaciations	95
4.2 Tertiary glaciations	97
4.3 The influence of the Antarctic ice-sheet on global climate	102
4.4 Quaternary glaciations	103
4.5 The 18,000 BP continents	108
5 Milankovitch theory and ice ages	110
5.1 The astronomical theory of climatic change	110
References	117

1.2	Deserts	124
2	Radiation and temperature	125
3	Rainfall	127
3.1	Rainfall variability	129
4	Evapotranspiration and water balance	130
4.1	Southern Sahara	131
4.2	North Africa and Middle East	135
5	African rainfall and teleconnections	135
6	The Indian Monsoon and global deserts	136
7	Closed lakes and the climatic history of North Africa	138
7.1	African monsoons and variations in the earth's orbital parameters	142
8	Desertification	143
8.1	Vegetation, albedo and climate	143
8.2	Vegetation, soil moisture and climate	146
	References	148

Chapter 5 Grassland and Vegetated Subsystems 153

1	Vegetation and water balance	153
2	Microclimates of grasslands	154
2.1	Radiation	154
2.2	Albedo	157
2.3	Atmospheric turbulence	165
2.4	Convection	169
3	Evapotranspiration	169
3.1	The Bowen ratio	174
4	Hydrology of grasslands	176
4.1	Resistances	177
4.2	The Penman-Monteith evaporation equation	179
4.3	Water balance	180
4.4	Potential evapotranspiration	182
4.5	Soil moisture models and actual evaporation	182
	References	186

Chapter 6 Forest Subsystems 189

1	Forest microclimates	191
1.1	Radiation	191
1.2	Temperature and humidity	193
1.3	Vertical exchanges	195
2	Forest hydrology	195
3	Forest clearance	209
3.1	The multilayer crop model	209
3.2	Some results of a multilayer crop model	211
3.3	Experimental studies	221
4	Interception, evaporation and run-off in tropical forests	223
4.1	Deforestation of the Amazon basin	229
	References	232

viii Contents

Part II *Impacts of the Climatic System* 238

Chapter 7 *Climate and Energy* 238

- 1 Climate as an energy source 241
- 2 The pollution of the atmosphere by energy use 241
 - 2.1 Carbon dioxide 241
 - 2.2 Aerosols 249
 - 2.3 Waste heat 250
 - 2.4 Urban climates 252
- 3 Climatic controls on energy use and the effects of climatic variations 254
 - 3.1 Long-term climatic changes 254
 - 3.2 Scenario of future climatic changes 257
- References 257

Chapter 8 *Climate and Food* 261

- 1 Climate and plant growth 261
 - 1.1 Temperature 265
 - 1.2 Soil moisture 265
- 2 Climate and grain production 266
- 3 Drought 271
 - 3.1 Definitions of agricultural drought 272
 - 3.2 Teleconnections 278
 - 3.3 Drought and increasing atmospheric CO₂ 278
- References 283
