

MULTIPLE REGRESSION AND CAUSAL ANALYSIS

McKee J. McClendon

Contents

Preface

xi

1. CAUSALITY AND SOCIAL SCIENCE

1

The Imagery of Causality

2

Criteria for Causal Inferences

4

Temporal Sequence

4

Covariance

7

Nonspurious Covariance

8

Causal Models

10

Multiple Causation

10

Causal Mechanisms

11

Conditional Effects

12

Causal Diagrams

13

Discussion

17

References

18

2. BIVARIATE REGRESSION AND CORRELATION

20

A Note on Formulas

20

Statistical Building Blocks

21

Mean

21

Variance

22

Covariance

22

Bivariate Regression

25

Linear Relationships

28

28

v

The Simplest Causal Model	
The Best-Fitting Line	30
The Regression Coefficients	31
Interpreting the Regression Coefficients	35
Regression of X on Y	38
Measures of Strength of Relationship	40
Coefficient of Determination	42
Standardized Regression Coefficient	42
Outliers and Influential Cases	45
An Example: Siblings and Fertility	49
Summary	53
References	58
	59
3. MULTIPLE REGRESSION	60
A Model with Two Independent Variables	61
Multiple Regression Statistics	66
The Example Data	66
Bivariate Regression Equations	71
Multiple Regression Equation	73
Multiple Correlation	80
Shrunken R^2	81
Standardized Measures of Partial Relationships	83
Standardized Partial Slopes	83
Semipartial Correlation	87
Partial Correlation	91
Additional Formulas	93
A Multiple Regression Example: Earnings, Education, and Experience	94
Multiple Regression/Correlation with Three or More Independent Variables	107
Redundancy and Suppression	109
Two Independent Variables	109
Three or More Independent Variables	116
Summary	116
References	118
Appendix 3A: Matrix Algebra for Multiple Regression	119
Matrices and Vectors	119
Matrix Operations	121
Addition and Subtraction	121
Multiplication	122
The Multiple Regression Model	124
Matrix Inversion	125
Matrix Solution for b	128

Standardized Slopes	131
Reference	132
4. TESTS OF STATISTICAL SIGNIFICANCE	133
Illustrative Sampling Distribution of b	134
Theoretical Sampling Distribution of b	138
Characteristics of the Distribution of b	138
Gauss-Markov Theorem	142
Assumptions about ϵ	143
t Tests	147
Bivariate Slopes	147
The Siblings and Fertility Example	151
Violations of Assumptions	154
Two Independent Variables	157
Earnings Example	158
s_b for Residualized Variables	159
Three or More Independent Variables	161
Multicollinearity	161
Anomia and Income Example	163
F Tests	167
F for Partial Slopes	168
F for R^2	170
F for Subsets of X 's	172
Detection and Correction of Heteroskedasticity	174
Plots for Heteroskedasticity	174
Siblings and Fertility Example	175
Earnings, Education, and Experience Example	176
White's Test for Heteroskedasticity	178
Siblings and Fertility Example	181
Earnings, Education, and Experience Example	185
Correcting the OLS Standard Error	186
Siblings and Fertility Example	187
Earnings, Education, and Experience Example	188
Weighted Least-Squares Regression	189
Siblings and Fertility Example	192
Earnings, Education, and Experience Example	194
Summary	195
References	197
5. NOMINAL INDEPENDENT VARIABLES	198
Dummy Variable Coding	199
Dichotomous Nominal Variables	199
Nonsense Coding	201
Dummy Coding	204

Polychotomous Nominal Variables	207
Inclusion of Another X with the Dummy Variables	213
Effects Coding	215
Contrast Coding	218
Summary	223
Reference	224
Appendix 5A: t Test for a Difference of Means	225
Appendix 5B: F Tests in Analysis of Variance	226
One-Way Analysis of Variance	226
Analysis of Covariance	227

6. NONLINEAR RELATIONSHIPS 230

Characteristics of Nonlinear Functions	231
A General Test for Nonlinearity	232
Describing an Empirical Nonlinear Relationship	232
The Nominalization Test for Nonlinearity	234
Estimation of Power Polynomial Functions	239
Characteristics of Power Polynomials	239
Hierarchical Polynomial Regression	243
Summary	250
A Quadratic Example	250
Equations with Two Power Polynomials	252
Transformations for Linearity	257
Power Transformations	259
The Example of Siblings and Children	263
The Example of Earnings, Education, and Experience	265
Partial-Residual Plots	266
Summary	268
References	270

7. NONADDITIVE RELATIONSHIPS 271

Additive Equations	272
Nonadditivity with α Quantitative and α Nominal X	273
A Nominal X with Three or More Categories	278
Two Quantitative X 's	281
More Complex Interactions	284
Interactions with Deviation Scores	286
Summary	287
References	287

8. CAUSAL ANALYSIS I 288

Single-Equation Models	289
A Two-Equation Causal Model	291

Direct, Indirect, Total, and Spurious Effects (DITS)	293
Reduced-Form Models and DITS	296
A Three-Equation Causal Model	299
DITS	300
Reduced and Semi-Reduced Models	302
Indirect Effects	304
Different Models Produce Different DITS	305
A Causal Analysis of SES and Self-Esteem	306
A Two-Equation Model	307
A Three-Equation Model	311
Nonrecursive Models	314
A Model for Anomia and Self-Esteem	318
Summary	320
References	321

9. CAUSAL ANALYSIS II

The Simplest Causal Model	322
A Two-Equation Model	323
Covariances	326
Chain Rule for Covariances	326
Covariances for Self-Esteem Model	331
Correlations	332
Variances	332
Chain Rule for Variances	332
Variances for Self-Esteem Model	335
Reduced-Form Variances and Covariances	336
Self-Esteem Example	338
A Three-Equation Model	339
Covariances	339
Variances	343
Summary	346
Reference	347

Appendix: Statistical Tables	349
