THIRD EDITION

MATHEMATICAL METHODS FOR PHYSICS AND ENGINEERING

Volume 1

K. F. RILEY
M. P. HOBSON
J. BENCE

CAMBRIDGE

Contents

<i>Preface to the third edition</i>	page xx
<i>Preface to the second edition</i>	xxiii
<i>Preface to the first edition</i>	xxv
1 Preliminary algebra	
1.1 Simple functions and equations	1
<i>Polynomial equations; factorisation; properties of roots</i>	1
1.2 Trigonometric identities	10
<i>Single angle; compound angles; double- and half-angle identities</i>	
1.3 Coordinate geometry	15
1.4 Partial fractions	18
<i>Complications and special cases</i>	
1.5 Binomial expansion	25
1.6 Properties of binomial coefficients	27
1.7 Some particular methods of proof	30
<i>Proof by induction; proof by contradiction; necessary and sufficient conditions</i>	
1.8 Exercises	36
1.9 Hints and answers	39
2 Preliminary calculus	41
2.1 Differentiation	41
<i>Differentiation from first principles; products; the chain rule; quotients; implicit differentiation; logarithmic differentiation; Leibnitz' theorem; special points of a function; curvature; theorems of differentiation</i>	

2.2	Integration	59
	<i>Integration from first principles; the inverse of differentiation; by inspection; sinusoidal functions; logarithmic integration; using partial fractions; substitution method; integration by parts; reduction formulae; infinite and improper integrals; plane polar coordinates; integral inequalities; applications of integration</i>	
2.3	Exercises	76
2.4	Hints and answers	81
3	Complex numbers and hyperbolic functions	83
3.1	The need for complex numbers	83
3.2	Manipulation of complex numbers	85
	<i>Addition and subtraction; modulus and argument; multiplication; complex conjugate; division</i>	
3.3	Polar representation of complex numbers	92
	<i>Multiplication and division in polar form</i>	
3.4	de Moivre's theorem	95
	<i>trigonometric identities; finding the nth roots of unity; solving polynomial equations</i>	
3.5	Complex logarithms and complex powers	99
3.6	Applications to differentiation and integration	101
3.7	Hyperbolic functions	102
	<i>Definitions; hyperbolic-trigonometric analogies; identities of hyperbolic functions; solving hyperbolic equations; inverses of hyperbolic functions; calculus of hyperbolic functions</i>	
3.8	Exercises	109
3.9	Hints and answers	113
4	Series and limits	115
4.1	Series	115
4.2	Summation of series	116
	<i>Arithmetic series; geometric series; arithmetico-geometric series; the difference method; series involving natural numbers; transformation of series</i>	
4.3	Convergence of infinite series	124
	<i>Absolute and conditional convergence; series containing only real positive terms; alternating series test</i>	
4.4	Operations with series	131
4.5	Power series	131
	<i>Convergence of power series; operations with power series</i>	
4.6	Taylor series	136
	<i>Taylor's theorem; approximation errors; standard Maclaurin series</i>	
4.7	Evaluation of limits	14
4.8	Exercises	14
4.9	Hints and answers	14

5	Partial differentiation	151
5.1	Definition of the partial derivative	151
5.2	The total differential and total derivative	153
5.3	Exact and inexact differentials	155
5.4	Useful theorems of partial differentiation	157
5.5	The chain rule	157
5.6	Change of variables	158
5.7	Taylor's theorem for many-variable functions	160
5.8	Stationary values of many-variable functions	162
5.9	Stationary values under constraints	167
5.10	Envelopes	173
5.11	Thermodynamic relations	176
5.12	Differentiation of integrals	178
5.13	Exercises	179
5.14	Hints and answers	185
6	Multiple integrals	187
6.1	Double integrals	187
6.2	Triple integrals	190
6.3	Applications of multiple integrals	191
	<i>Areas and volumes; masses, centres of mass and centroids; Pappus' theorems; moments of inertia; mean values of functions</i>	
6.4	Change of variables in multiple integrals	199
	<i>Change of variables in double integrals; evaluation of the integral $I = \int_{-\infty}^{\infty} e^{-x^2} dx$; change of variables in triple integrals; general properties of Jacobians</i>	
6.5	Exercises	207
6.6	Hints and answers	211
7	Vector algebra	212
7.1	Scalars and vectors	212
7.2	Addition and subtraction of vectors	213
7.3	Multiplication by a scalar	214
7.4	Basis vectors and components	217
7.5	Magnitude of a vector	218
7.6	Multiplication of vectors	219
	<i>Scalar product; vector product; scalar triple product; vector triple product</i>	

7.7	Equations of lines, planes and spheres	
7.8	Using vectors to find distances	226
	<i>Point to line; point to plane; line to line; line to plane</i>	229
7.9	Reciprocal vectors	
7.10	Exercises	233
7.11	Hints and answers	234
		240
8	Matrices and vector spaces	
8.1	Vector spaces	241
	<i>Basis vectors; inner product; some useful inequalities</i>	242
8.2	Linear operators	247
8.3	Matrices	249
8.4	Basic matrix algebra	250
	<i>Matrix addition; multiplication by a scalar; matrix multiplication</i>	
8.5	Functions of matrices	255
8.6	The transpose of a matrix	255
8.7	The complex and Hermitian conjugates of a matrix	256
8.8	The trace of a matrix	258
8.9	The determinant of a matrix	259
	<i>Properties of determinants</i>	
8.10	The inverse of a matrix	263
8.11	The rank of a matrix	267
8.12	Special types of square matrix	268
	<i>Diagonal; triangular; symmetric and antisymmetric; orthogonal; Hermitian and anti-Hermitian; unitary; normal</i>	
8.13	Eigenvectors and eigenvalues	272
	<i>Of a normal matrix; of Hermitian and anti-Hermitian matrices; of a unitary matrix; of a general square matrix</i>	
8.14	Determination of eigenvalues and eigenvectors	280
	<i>Degenerate eigenvalues</i>	
8.15	Change of basis and similarity transformations	282
8.16	Diagonalisation of matrices	285
8.17	Quadratic and Hermitian forms	288
	<i>Stationary properties of the eigenvectors; quadratic surfaces</i>	
8.18	Simultaneous linear-equations	292
	<i>Range; null space; N simultaneous linear equations in N unknowns; singular value decomposition</i>	
8.19	Exercises	307
8.20	Hints and answers	314
		316
9	Normal modes	317
9.1	Typical oscillatory systems	322
9.2	Symmetry and normal modes	

9.3	Rayleigh–Ritz method	327
9.4	Exercises	329
9.5	Hints and answers	332
10	Vector calculus	334
10.1	Differentiation of vectors	334
	<i>Composite vector expressions; differential of a vector</i>	
10.2	Integration of vectors	339
10.3	Space curves	340
10.4	Vector functions of several arguments	344
10.5	Surfaces	345
10.6	Scalar and vector fields	347
10.7	Vector operators	347
	<i>Gradient of a scalar field; divergence of a vector field; curl of a vector field</i>	
10.8	Vector operator formulae	354
	<i>Vector operators acting on sums and products; combinations of grad, div and curl</i>	
10.9	Cylindrical and spherical polar coordinates	357
10.10	General curvilinear coordinates	364
10.11	Exercises	369
10.12	Hints and answers	375
11	Line, surface and volume integrals	377
11.1	Line integrals	377
	<i>Evaluating line integrals; physical examples; line integrals with respect to a scalar</i>	
11.2	Connectivity of regions	383
11.3	Green's theorem in a plane	384
11.4	Conservative fields and potentials	387
11.5	Surface integrals	389
	<i>Evaluating surface integrals; vector areas of surfaces; physical examples</i>	
11.6	Volume integrals	396
	<i>Volumes of three-dimensional regions</i>	
11.7	Integral forms for grad, div and curl	398
11.8	Divergence theorem and related theorems	401
	<i>Green's theorems; other related integral theorems; physical applications</i>	
11.9	Stokes' theorem and related theorems	406
	<i>Related integral theorems; physical applications</i>	
11.10	Exercises	406
11.11	Hints and answers	41
12	Fourier series	41
12.1	The Dirichlet conditions	41

12.2	The Fourier coefficients	417
12.3	Symmetry considerations	419
12.4	Discontinuous functions	420
12.5	Non-periodic functions	422
12.6	Integration and differentiation	424
12.7	Complex Fourier series	424
12.8	Parseval's theorem	426
12.9	Exercises	427
12.10	Hints and answers	431
13	Integral transforms	
13.1	Fourier transforms	433
	<i>The uncertainty principle; Fraunhofer diffraction; the Dirac δ-function; relation of the δ-function to Fourier transforms; properties of Fourier transforms; odd and even functions; convolution and deconvolution; correlation functions and energy spectra; Parseval's theorem; Fourier transforms in higher dimensions</i>	433
13.2	Laplace transforms	
	<i>Laplace transforms of derivatives and integrals; other properties of Laplace transforms</i>	453
13.3	Concluding remarks	
13.4	Exercises	455
13.5	Hints and answers	460
14	First-order ordinary differential equations	
14.1	General form of solution	46
14.2	First-degree first-order equations	46
	<i>Separable-variable equations; exact equations; inexact equations, integrating factors; linear equations; homogeneous equations; isobaric equations; Bernoulli's equation; miscellaneous equations</i>	47
14.3	Higher-degree first-order equations	4
	<i>Equations soluble for p; for x; for y; Clairaut's equation</i>	
14.4	Exercises	
14.5	Hints and answers	
15	Higher-order ordinary differential equations	
15.1	Linear equations with constant coefficients	
	<i>Finding the complementary function $y_c(x)$; finding the particular integral $y_p(x)$; constructing the general solution $y_c(x) + y_p(x)$; linear recurrence relations; Laplace transform method</i>	
15.2	Linear equations with variable coefficients	
	<i>The Legendre and Euler linear equations; exact equations; partially known complementary function; variation of parameters; Green's functions; canonical form for</i>	

15.3	General ordinary differential equations <i>Dependent variable absent; independent variable absent; non-linear exact equations; isobaric or homogeneous equations; equations homogeneous in x or y alone; equations having $y = Ae^x$ as a solution</i>	518
15.4	Exercises	523
15.5	Hints and answers	529
16	Series solutions of ordinary differential equations	531
16.1	Second-order linear ordinary differential equations <i>Ordinary and singular points</i>	531
16.2	Series solutions about an ordinary point	535
16.3	Series solutions about a regular singular point <i>Distinct roots not differing by an integer; repeated root of the indicial equation; distinct roots differing by an integer</i>	538
16.4	Obtaining a second solution <i>The Wronskian method; the derivative method; series form of the second solution</i>	544
16.5	Polynomial solutions	548
16.6	Exercises	550
16.7	Hints and answers	553
17	Eigenfunction methods for differential equations	554
17.1	Sets of functions <i>Some useful inequalities</i>	556
17.2	Adjoint, self-adjoint and Hermitian operators	559
17.3	Properties of Hermitian operators <i>Reality of the eigenvalues; orthogonality of the eigenfunctions; construction of real eigenfunctions</i>	561
17.4	Sturm–Liouville equations <i>Valid boundary conditions; putting an equation into Sturm–Liouville form</i>	564
17.5	Superposition of eigenfunctions: Green's functions	569
17.6	A useful generalisation	572
17.7	Exercises	573
17.8	Hints and answers	576
18	Special functions	577
18.1	Legendre functions <i>General solution for integer ℓ; properties of Legendre polynomials</i>	577
18.2	Associated Legendre functions	587
18.3	Spherical harmonics	593
18.4	Chebyshev functions	595
18.5	Bessel functions <i>General solution for non-integer ν; general solution for integer ν; properties of Bessel functions</i>	602

18.6	Spherical Bessel functions	614
18.7	Laguerre functions	616
18.8	Associated Laguerre functions	621
18.9	Hermite functions	624
18.10	Hypergeometric functions	628
18.11	Confluent hypergeometric functions	633
18.12	The gamma function and related functions	635
18.13	Exercises	640
18.14	Hints and answers	646
19	Quantum operators	
19.1	Operator formalism <i>Commutators</i>	648
19.2	Physical examples of operators <i>Uncertainty principle; angular momentum; creation and annihilation operators</i>	648
19.3	Exercises	656
19.4	Hints and answers	671
20	Partial differential equations: general and particular solutions	674
20.1	Important partial differential equations <i>The wave equation; the diffusion equation; Laplace's equation; Poisson's equation; Schrödinger's equation</i>	675
20.2	General form of solution	676
20.3	General and particular solutions <i>First-order equations; inhomogeneous equations and problems; second-order equations</i>	680
20.4	The wave equation	681
20.5	The diffusion equation	693
20.6	Characteristics and the existence of solutions <i>First-order equations; second-order equations</i>	695
20.7	Uniqueness of solutions	699
20.8	Exercises	705
20.9	Hints and answers	707
21	Partial differential equations: separation of variables and other methods	711
21.1	Separation of variables: the general method	713
21.2	Superposition of separated solutions	717
21.3	Separation of variables in polar coordinates <i>Laplace's equation in polar coordinates; spherical harmonics; other equations in polar coordinates; solution by expansion; separation of variables for inhomogeneous equations</i>	725
21.4	Integral transform methods	747

21.5	Inhomogeneous problems – Green's functions <i>Similarities to Green's functions for ordinary differential equations; general boundary-value problems; Dirichlet problems; Neumann problems</i>	751
21.6	Exercises	767
21.7	Hints and answers	773
22	Calculus of variations	
22.1	The Euler–Lagrange equation	775
22.2	Special cases <i>F does not contain y explicitly; F does not contain x explicitly</i>	776
22.3	Some extensions <i>Several dependent variables; several independent variables; higher-order derivatives; variable end-points</i>	777
22.4	Constrained variation	781
22.5	Physical variational principles <i>Fermat's principle in optics; Hamilton's principle in mechanics</i>	785
22.6	General eigenvalue problems	787
22.7	Estimation of eigenvalues and eigenfunctions	790
22.8	Adjustment of parameters	792
22.9	Exercises	795
22.10	Hints and answers	797
		801
23	Integral equations	803
23.1	Obtaining an integral equation from a differential equation	803
23.2	Types of integral equation	804
23.3	Operator notation and the existence of solutions	805
23.4	Closed-form solutions <i>Separable kernels; integral transform methods; differentiation</i>	806
23.5	Neumann series	813
23.6	Fredholm theory	815
23.7	Schmidt–Hilbert theory	816
23.8	Exercises	819
23.9	Hints and answers	823
24	Complex variables	824
24.1	Functions of a complex variable	825
24.2	The Cauchy–Riemann relations	827
24.3	Power series in a complex variable	830
24.4	Some elementary functions	832
24.5	Multivalued functions and branch cuts	835
24.6	Singularities and zeros of complex functions	837
24.7	Conformal transformations	839
24.8	Complex integrals	845

24.9	Cauchy's theorem	849
24.10	Cauchy's integral formula	851
24.11	Taylor and Laurent series	853
24.12	Residue theorem	858
24.13	Definite integrals using contour integration	861
24.14	Exercises	867
24.15	Hints and answers	870
25	Applications of complex variables	
25.1	Complex potentials	871
25.2	Applications of conformal transformations	871
25.3	Location of zeros	876
25.4	Summation of series	879
25.5	Inverse Laplace transform	882
25.6	Stokes' equation and Airy integrals	884
25.7	WKB methods	888
25.8	Approximations to integrals <i>Level lines and saddle points; steepest descents; stationary phase</i>	895 905
25.9	Exercises	920
25.10	Hints and answers	925
26	Tensors	927
26.1	Some notation	928
26.2	Change of basis	929
26.3	Cartesian tensors	930
26.4	First- and zero-order Cartesian tensors	932
26.5	Second- and higher-order Cartesian tensors	935
26.6	The algebra of tensors	938
26.7	The quotient law	939
26.8	The tensors δ_{ij} and ϵ_{ijk}	941
26.9	Isotropic tensors	944
26.10	Improper rotations and pseudotensors	946
26.11	Dual tensors	949
26.12	Physical applications of tensors	950
26.13	Integral theorems for tensors	954
26.14	Non-Cartesian coordinates	955
26.15	The metric tensor	957
26.16	General coordinate transformations and tensors	960
26.17	Relative tensors	963
26.18	Derivatives of basis vectors and Christoffel symbols	965
26.19	Covariant differentiation	968
26.20	Vector operators in tensor form	971

26.21	Absolute derivatives along curves	975
26.22	Geodesics	976
26.23	Exercises	977
26.24	Hints and answers	982
27	Numerical methods	
27.1	Algebraic and transcendental equations	984
	<i>Rearrangement of the equation; linear interpolation; binary chopping; Newton-Raphson method</i>	985
27.2	Convergence of iteration schemes	
27.3	Simultaneous linear equations	992
	<i>Gaussian elimination; Gauss-Seidel iteration; tridiagonal matrices</i>	994
27.4	Numerical integration	
	<i>Trapezium rule; Simpson's rule; Gaussian integration; Monte Carlo methods</i>	1000
27.5	Finite differences	
27.6	Differential equations	1019
	<i>Difference equations; Taylor series solutions; prediction and correction; Runge-Kutta methods; isoclines</i>	1020
27.7	Higher-order equations	
27.8	Partial differential equations	1028
27.9	Exercises	1030
		1033
27.10	Hints and answers	1039
28	Group theory	1041
28.1	Groups	1041
	<i>Definition of a group; examples of groups</i>	
28.2	Finite groups	1049
28.3	Non-Abelian groups	1052
28.4	Permutation groups	1056
28.5	Mappings between groups	1059
28.6	Subgroups	1061
28.7	Subdividing a group	1063
	<i>Equivalence relations and classes; congruence and cosets; conjugates and classes</i>	
28.8	Exercises	1070
28.9	Hints and answers	1074
29	Representation theory	1076
29.1	Dipole moments of molecules	1077
29.2	Choosing an appropriate formalism	1078
29.3	Equivalent representations	1084
29.4	Reducibility of a representation	1086
29.5	The orthogonality theorem for irreducible representations	1090

29.6	Characters	
	<i>Orthogonality property of characters</i>	
29.7	Counting irreps using characters	1092
	<i>Summation rules for irreps</i>	
29.8	Construction of a character table	1095
29.9	Group nomenclature	1100
29.10	Product representations	1102
29.11	Physical applications of group theory	1103
	<i>Bonding in molecules; matrix elements in quantum mechanics; degeneracy of normal modes; breaking of degeneracies</i>	1105
29.12	Exercises	
29.13	Hints and answers	1113
		1117
30	Probability	
30.1	Venn diagrams	1119
30.2	Probability	1119
	<i>Axioms and theorems; conditional probability; Bayes' theorem</i>	1124
30.3	Permutations and combinations	1133
30.4	Random variables and distributions	1139
	<i>Discrete random variables; continuous random variables</i>	
30.5	Properties of distributions	1143
	<i>Mean; mode and median; variance and standard deviation; moments; central moments</i>	
30.6	Functions of random variables	1150
30.7	Generating functions	1157
	<i>Probability generating functions; moment generating functions; characteristic functions; cumulant generating functions</i>	
30.8	Important discrete distributions	1168
	<i>Binomial; geometric; negative binomial; hypergeometric; Poisson</i>	
30.9	Important continuous distributions	1179
	<i>Gaussian; log-normal; exponential; gamma; chi-squared; Cauchy; Breit-Wigner; uniform</i>	
30.10	The central limit theorem	1195
30.11	Joint distributions	1196
	<i>Discrete bivariate; continuous bivariate; marginal and conditional distributions</i>	1199
30.12	Properties of joint distributions	
	<i>Means; variances; covariance and correlation</i>	1205
30.13	Generating functions for joint distributions	1206
30.14	Transformation of variables in joint distributions	1207
30.15	Important joint distributions	
	<i>Multinomial; multivariate Gaussian</i>	1211
30.16	Exercises	1218
30.17	Hints and answers	

CONTENTS

31	Statistics	1221
31.1	Experiments, samples and populations	1221
31.2	Sample statistics	1222
	<i>Averages; variance and standard deviation; moments; covariance and correlation</i>	
31.3	Estimators and sampling distributions	1229
	<i>Consistency, bias and efficiency; Fisher's inequality; standard errors; confidence limits</i>	
31.4	Some basic estimators	1243
	<i>Mean; variance; standard deviation; moments; covariance and correlation</i>	
31.5	Maximum-likelihood method	1255
	<i>ML estimator; transformation invariance and bias; efficiency; errors and confidence limits; Bayesian interpretation; large-N behaviour; extended ML method</i>	
31.6	The method of least squares	1271
	<i>Linear least squares; non-linear least squares</i>	
31.7	Hypothesis testing	1277
	<i>Simple and composite hypotheses; statistical tests; Neyman-Pearson; generalised likelihood-ratio; Student's t; Fisher's F; goodness of fit</i>	
1.8	Exercises	1298
1.9	Hints and answers	1303
		1305
