

THERMODYNAMICS AND HEAT POWER

11266

FIFTH EDITION

KURT C. ROLLE

Contents

1 Introduction 1

- 1-1 Some Reasons for Studying Thermodynamics 1
- 1-2 Historical Background of Thermodynamics 6
- 1-3 Basic Dimensions and Unit Systems 10
- 1-4 Thermodynamic Calculations and Unit Cancellations 11
- 1-5 Further Thermodynamic Calculations 13
- 1-6 Method of Problem Solving 22
- 1-7 Summary 23
- Practice Problems 24

2 The Thermodynamic System 27

- 2-1 The System 27
- 2-2 Elementary Theory of Matter 29
- 2-3 Property 33
- 2-4 State of a System 33
- 2-5 Process 33
- 2-6 Cycles and Cyclic Devices 33
- 2-7 Weight and Mass 34
- 2-8 Volume, Density, and Pressure 37
- 2-9 Equilibrium and the Zeroth Law of Thermodynamics 51
- 2-10 Temperature and Thermometers 51
- 2-11 Energy 58
- 2-12 Efficiency 62
- 2-13 Units Revisited 63
- 2-14 Summary 64
- Practice Problems 65

3 Work, Heat, and Reversibility 69

- 3-1 Work 69
- 3-2 Power 81
- 3-3 Heat 84
- 3-4 Reversibility 85
- 3-5 The Equivalence of Work and Heat 89

3-6	Types of Systems	89
3-7	The Forms of Energy	90
3-8	Summary	90
	Practice Problems	92

4

Conservation of Mass and the First Law of Thermodynamics

97

4-1	Conservation of Mass	97
4-2	Steady Flow	101
4-3	Uniform Flow	103
4-4	Conservation of Energy	108
4-5	The First Law of Thermodynamics for a Closed System	112
4-6	The First Law of Thermodynamics for an Isolated System	112
4-7	Flow Energy and Enthalpy	114
4-8	The First Law of Thermodynamics for an Open System	118
4-9	Summary	124
	Practice Problems	125

5

Equations of State and Calorimetry

133

5-1	Equations of State and Pure Substances	133
5-2	Pressure-Volume-Temperature Relationships	136
5-3	Caloric Equations of State	144
5-4	Calorimetry	152
5-5	Properties of Pure Substances	156
5-6	Summary	162
	Practice Problems	163

6

Processes

166

6-1	Processes of Perfect Gases	166
6-2	Adiabatic Processes of Perfect Gases	178
6-3	Processes of Compressible Gases	186
6-4	Processes of Incompressible Liquids	189
6-5	Processes of Solids	191
6-6	Processes of Pure Substances	194
6-7	Summary	201
	Practice Problems	203

7

Heat Engines and the Second Law of Thermodynamics

208

7-1	Heat Engines and Cyclic Devices	208
7-2	The Carnot Engine and Entropy	211

7-3	Thermal Efficiency	218
7-4	Refrigeration and Heat Pump Cycles	220
7-5	The Second Law of Thermodynamics	225
7-6	Entropy and Reversibility	229
7-7	Entropy Changes	230
7-8	The Isentropic Process	236
7-9	The Third Law of Thermodynamics	239
7-10	Carnot Cycle Analysis	240
7-11	Summary	247
	Practice Problems	249

8

Availability and Useful Work

254

8-1	Useful Work	254
8-2	Availability	257
8-3	Energy Degradation	260
8-4	Free Energy	266
8-5	Summary	268
	Practice Problems	268

9

The Internal Combustion Engine and the Otto and Diesel Cycles

270

9-1	The Internal Combustion Engine	271
9-2	The Ideal Otto Cycle and Air-Standard Analysis	271
9-3	Otto Cycle Efficiency	284
9-4	The Actual Otto Engine	286
9-5	The Diesel Engine and Air-Standard Analysis	300
9-6	The Diesel-Otto Comparison	308
9-7	The Dual Cycle	309
9-8	Computer-Aided Analysis	310
9-9	Engine Design Considerations	313
9-10	Summary	317
	Practice Problems	317

10

Gas Turbines, Jet Propulsion, and the Brayton Cycle

322

10-1	The Ideal Brayton Cycle and the Gas Turbine Engine	322
10-2	The Gas Turbine	325
10-3	Combustors and Compressors	328
10-4	Nozzles and Diffusers	331
10-5	The Gas Turbine Engine and Air-Standard Analysis	339
10-6	Regenerative Cycles	345
10-7	Jet Propulsion	349
10-8	Rockets	354
10-9	Computer-Aided Analysis of the Gas Turbine	356
10-10	Summary	357
	Practice Problems	358

11

**Steam Power Generation
and the Rankine Cycle**

363

- 11-1 The Rankine Cycle 363
- 11-2 Boilers and Steam Generators 365
- 11-3 Steam Turbines 367
- 11-4 Pumps 369
- 11-5 Condensers 370
- 11-6 Steam as a Working Fluid 371
- 11-7 Analysis of Steam Power Generation Cycles 380
- 11-8 The Reheat Cycle 385
- 11-9 The Regenerative Cycle 389
- 11-10 The Reheat-Regenerative Cycle 393
- 11-11 Other Considerations of the Rankine Cycle 399
- 11-12 Summary 401
- Practice Problems 402

12

Refrigeration and Heat Pumps

407

- 12-1 The Reversed Carnot Cycle 407
- 12-2 The Vapor Compression Cycles 411
- 12-3 Analysis of Vapor Compression Refrigeration Systems 415
- 12-4 The Reversed Brayton Cycle or Air Cycle 419
- 12-5 Ammonia Absorption Refrigeration 427
- 12-6 Cryogenics and Gas Liquefaction 429
- 12-7 Heat Pumps 431
- 12-8 Summary 435
- Practice Problems 436

13

Mixtures

438

- 13-1 Mixture Analysis 438
- 13-2 Perfect Gas Mixtures 442
- 13-3 Water and Air Mixtures and the Psychrometric Chart 445
- 13-4 Processes of Air-Water Mixtures 452
- 13-5 Chemical Potential 462
- 13-6 Diffusion 464
- 13-7 Summary 467
- Practice Problems 469

14

Reacting Mixtures and Combustion

472

- 14-1 The Combustion Process 472
- 14-2 Fuels 474
- 14-3 Air/Fuel Ratios 476
- 14-4 Heat of Formation 477
- 14-5 Combustion Analysis 478

- 14-6 Adiabatic Combustion Temperature 482
- 14-7 Entropy Generation in Combustion 484
- 14-8 Summary 487
- Practice Problems 488

15 Heat Transfer

- 15-1 Conduction Heat Transfer 491
- 15-2 Convection Heat Transfer 499
- 15-3 Combined Conduction-Convection Applications 500
- 15-4 Forced Convection 514
- 15-5 Natural Convection 519
- 15-6 Radiation Heat Transfer 525
- 15-7 Heat Exchangers 536
- 15-8 Summary 541
- Practice Problems 544

16 Heating and Air Conditioning 551

- 16-1 Parameters in Heating and Air Conditioning 551
- 16-2 Analysis of Space Heating 557
- 16-3 Analysis of Air Conditioning and Refrigeration 563
- 16-4 Summary 566
- Practice Problems 567

17 Other Power Devices 568

- 17-1 Electric Generators, Motors, and Batteries 568
- 17-2 Fuel Cells 573
- 17-3 Thermoelectric Devices 575
- 17-4 Magnetohydrodynamics 577
- 17-5 Biological Systems 578
- 17-6 Stirling Cycle Devices 583
- 17-7 Summary 586
- Practice Problems 587

Appendixes

- A Mathematical Relationships A-1
- B Tables and Charts B-1
- C Selected References C-1
- D Thermodynamic Notation and List of Symbols D-1

Answers to Selected Problems ANS-1

Index I-1
