Introduction to
Modern Physics

Holt-Saunders International Editions

Table of Contents

Introduction 1

CHAPTER 1

Atoms and the Kinetic Theory 2

1. The Atomic Theory of Matter 2
2. The Kinetic Theory of Gases 3
3. Specific Heats of Gases 6
4. The Maxwell Distribution of Velocities 9
5. Brownian Motion 12

Summary 13

Additional Reading 14

Problems 14

CHAPTER 2

The First of the Elementary Particles 16

1. Discovery of the Electron 16
2. The Quantization of Electric Charge 20
3. The Proton, the Neutron, Antiparticles, and Spin 25 ✓
4. Discovery of X-rays and Natural Radioactivity 26 ✓

Summary 29

Additional Reading 29

Problems 29

viii TABLE OF CONTENTS

CHAPTER 3

Special Relativity: Space and Time 31

1. Classical Principle of Relativity 31
2. Electromagnetic Theory and the Galilean Transformation 34
3. The Michelson-Morley Experiment 37
4. The Postulates of Special Relativity 39
5. The Einstein Transformation 41
6. Relativistic Kinematics 43
7. Relativistic Velocity Addition 48
- *8. The Space-Time Four-Vector 50
9. Relativity and Common Sense 51

Summary 52

Additional Reading 53

Problems 53

CHAPTER 4

Special Relativity: Dynamics 56

- ①. Relativistic Change of Mass 56
2. Equivalence of Mass and Energy 58
3. Relativistic Momentum 60
- *4. The Momentum-Energy Four-Vector 62
- *5. Relativistic Collisions and the C-Frame 66
- *6. The Creation and Annihilation of Particles 69
- *7. The Doppler Effect 71

Summary 73

Additional Reading 73

Problems 73

CHAPTER 5

The Quantum Theory of Light 76

- ①. Blackbody Radiation 76
- ②. The Rayleigh-Jeans Theory 78
3. Calculation of Jeans' Number 79
- ④. Planck's Quantum Theory of Radiation 81
- *5. Einstein's Transition Probabilities 85
6. Amplification Through Stimulated Emission 90
7. The Ruby and Neon Lasers 92

Summary 94

Additional Reading 95

Problems 95

CHAPTER 6

The Particle Nature of Photons 97

1. Introduction 97
2. The Photoelectric Effect 97
3. The Compton Effect 102
4. The Dual Nature of Photons: The Wave Packet 105
5. Heisenberg's Uncertainty Principle 107
6. Photons as Exchange Particles 110

Summary 111

Additional Reading 112

Problems 112

CHAPTER 7

The Quantum Theory of The Atom 115

1. The Atomic Models of Thomson and Rutherford 115
2. Classical Scattering Cross Sections 117
3. Bohr's Theory of Atomic Spectra 124
4. The Franck-Hertz Experiment 130
5. X-Ray Spectra and the Bohr Theory 131

Summary 136

Additional Reading 136

Problems 136

CHAPTER 8

The Wave Nature of Particles 139

1. The deBroglie Wavelength 139
2. The Diffraction of Waves from Crystals 141
3. The Wave Function and Probability 146
4. Representing Particles by Wave Packets 151

Summary 155

Additional Reading 156

Problems 156

CHAPTER 9

The Schrödinger Wave Equation 159

1. Classical Waves 159
2. The Schrödinger Wave Equation 161
3. Separation of The Space and Time Variables 162
4. The Eigenvalue Problem 163

X TABLE OF CONTENTS

- 5. Energy States in Quantum Systems 167
- *6. Expectation Values 168

Summary 169

Additional Reading 170

Problems 170

CHAPTER 10

Applications to One-Dimensional Quantum Systems 172

- 1. Particle in a Box or An Infinite Potential Well 172
- 2. Free Particle and a Finite Well 174
- 3. Particle Bound to a Finite Well 177
- 4. Tunneling Through Barriers 178
- 5. The Harmonic Oscillator 180

Summary 184

Additional Reading 184

Problems 185

CHAPTER 11

Applications of Quantum Mechanics to Atomic Theory 187

- 1. The Hydrogen Atom 187
- 2. Energy Levels and Electron Probability Density 189
- 3. Electron Spin and the Pauli Principle 194
- 4. Elementary Magnetic Moments 197
- 5. Spatial Quantization 200
- *6. Vector Coupling of Angular Momenta 203
- *7. The Landé g Factor and the Zeeman Effect 206

Summary 210

Additional Reading 213

Problems 213

CHAPTER 12

Applications to Solid State Physics 215

- 1. Introduction 215
- 2. The Free Electron Theory of Metals 217
- 3. The Band Theory of Metals 221
- 4. Metals, Insulators, and Semiconductors 224
- 5. Types of Semiconductors 225
- 6. Binding Energies of Impurity States 228
- 7. The p - n Junction 229
- 8. The p - n Junction as a Rectifier 232
- 9. Applications of p - n Junctions 234
- 10. Junction Transistors 235

Summary 236

Additional Reading 237

Problems 237

CHAPTER 13

The Atomic Nucleus 239

1. Nuclear Structure 240
2. Nuclear Binding Energy ~~243~~ ✓243
3. The Nuclear Force and the Pion 246
4. Nuclear Spin, Energy Levels and Magnetic Moments 249
5. Models of the Nucleus 253

Summary 254

Additional Reading 255

Problems 256

CHAPTER 14

Nuclear Transformations 257

1. The Radioactive Decay Law 258
2. Multiple Decay Processes 261
3. Radio-Carbon Dating 263
4. Gamma Ray Emission 264
5. Alpha Decay ~~266~~
6. Beta Decay 268
7. Low-Energy Nuclear Reactions 269
8. Nuclear Fission ~~271~~
9. Nuclear Fusion ~~273~~

Summary 275

Additional Reading 276

Problems 276

Appendices

- A. Velocity and Acceleration in Polar Coordinates 278
- B. The Rutherford Scattering Equation 280
- C. The Fourier Integral and the Delta Function 282
- D. Ground State Electron Configurations for the Elements 286
- E. Gauss' Probability Integral and others 288
- F. Table of Nuclear Masses 289
- G. Nobel Prizes in Physics 297
- H. Answers to Odd-numbered Problems 300

Index 302
