A CHAPMAN & HALL BOOK

Contents

Preface	xiii
1 A Macroscopic View of Matter	1
1.1 Viewing the World at Different Scales	1
1.2 Thermodynamics	2
1.3 The Thermodynamic Limit	3
1.4 Thermodynamic Transformations	4
1.5 Classic Ideal Gas	7
1.6 First Law of Thermodynamics	8
1.7 Magnetic Systems	9
Problems	11
References	13
2 Heat and Entropy	15
2.1 The Heat Equations	15
2.2 Applications to Ideal Gas	16
2.3 Carnot Cycle	19
2.4 Second Law of Thermodynamics	20
2.5 Absolute Temperature	21
2.6 Temperature as Integrating Factor	22
2.7 Entropy	25
2.8 Entropy of Ideal Gas	26
2.9 The Limits of Thermodynamics	27
Problems	27
3 Using Thermodynamics	33
3.1 The Energy Equation	33
3.2 Some Measurable Coefficients	34
3.3 Entropy and Loss	35
3.4 TS Diagram	37
3.5 Condition for Equilibrium	39
3.6 Helmholtz Free Energy	40
3.7 Gibbs Potential	41
3.8 Maxwell Relations	42
3.9 Chemical Potential	42
Problems	43

4	Phase Transitions	47	
4.1	First-Order Phase Transition	47	
4.2	Condition for Phase Coexistence	49	7.4 S
4.3	Clapeyron Equation	50	7.5 D
4.4	Van der Waals Equation of State	51	7.6 H
4.5	Virial Expansion	53	7.7 V
4.6	Critical Point	53	7.8 N
4.7	Maxwell Construction	55	Problem
4.8	Scaling	56	Referen
4.9	Nucleation and Spinodal Decomposition	57	
	Problems	60	8 Canono
	References	63	8.1
5	The Statistical Approach	65	8.2
5.1	The Atomic View	65	8.3
5.2	Random Walk	67	8.4
5.3	Phase Space	69	8.5
5.4	Distribution Function	70	8.6
5.5	Ergodic Hypothesis	72	8.7
5.6	Statistical Ensemble	72	Prob
5.7	Microcanonical Ensemble	73	9 Gr
5.8	Correct Boltzmann Counting	74	9.1
5.9	Distribution Entropy: Boltzmann's H	76	9.2
5.10	The Most Probable Distribution	77	9.3
5.11	Information Theory: Shannon Entropy	78	9.4
	Problems	80	9.5
	References	82	9.6
6	Maxwell-Boltzmann Distribution	83	9.7
6.1	Determining the Parameters	83	9.8
6.2	Pressure of Ideal Gas	84	9.9
6.3	Equipartition of Energy	85	9.10
6.4	Distribution of Speed	87	9.11
6.5	Entropy	88	9.12
6.6	Derivation of Thermodynamics	89	9.13
6.7	Fluctuations	90	9.14
6.8	The Boltzmann Factor	91	9.15
6.9	Time's Arrow	92	9.16
	Problems	93	9.17
	References	97	9.18
7	Transport Phenomena	99	10 N
7.1	Collisionless and Hydrodynamic Regimes	99	10.1
7.2	Maxwell's Demon	101	10.2
7.3	Nonviscous Hydrodynamics	101	10.3

7.4	Sound Wave	103
7.5	Diffusion	103
7.6	Heat Conduction	105
7.7	Viscosity	106
7.8	Navier-Stokes Equation	107
	Problems	109
	References	110
8	Canonical Ensemble	111
8.1	Review of the Microcanonical Ensemble	111
8.2	Classical Canonical Ensemble	111
8.3	The Partition Function	114
8.4	Connection with Thermodynamics	114
8.5	Energy Fluctuations	115
8.6	Minimization of Free Energy	116
8.7	Classical Ideal Gas	118
	Problems	119
9	Grand Canonical Ensemble	123
9.1	The Particle Reservoir	123
9.2	Grand Partition Function	123
9.3	Number Fluctuations	124
9.4	Connection with Thermodynamics	125
9.5	Parametric Equation of State and Virial Expansion	126
9.6	Critical Fluctuations	127
9.7	Pair Creation	128
	Problems	130
10	Noise	133
10.1	Thermal Fluctuations	133
10.2	Nyquist Noise	134
10.3	Brownian Motion	136
10.4	Einstein's Theory	138
10.5	Diffusion:	140
10.6	Einstein's Relation	142
10.7	Molecular Reality	143
10.8	Fluctuation and Dissipation	144
10.9	Brownian Motion of the Stock Market	145
	Problems	148
	References	149
11	Stochastic Processes	151
11.1	Randomness and Probability	151
11.2	Binomial Distribution	152
11.3	Poisson Distribution	154

11.4	Gaussian Distribution	155	15	Quantum I
11.5	Central Limit Theorem	157	15.1	Inco
11.6	Shot Noise	157	15.2	Den
