

PRINCIPLES OF PHYSICS

M. Nelkon

5145

Eighth Edition

5145

Contents

<i>Preface</i>	iii
<i>Tables of Formulae and Units</i>	x
1 Introduction • Some Basic Points	2
Theory and experiment. Forms of energy. Units. Measurements. Graphs.	
MECHANICS AND FLUIDS	12
2 Dynamics • Speed, Velocity, Acceleration	13
Speed. Velocity. Acceleration. Deceleration. Equations of linear motion. Measurement of g by centisecond clock. Pendulum method. Displacement-time and velocity-time graphs. Scalars and vectors. Components of g .	
3 Force, Momentum, Energy, Power	36
Force and acceleration. Forces of gravity and friction. Inertial mass. Investigations of $F = ma$. Units. Mass and weight. Friction and motion. Terminal velocity. Circular motion and acceleration. Force and momentum. Conservation of linear momentum. Work. Energy. Potential and kinetic energy. Conservation of energy. Power.	
4 Forces and Moments	64
Moments. Applications. Equilibrium and moments. Equilibrium of parallel forces. Classes of levers. Centre of gravity. Stable, unstable, neutral equilibrium.	
5 Machines • Resultant and Component of Forces	81
Mechanical advantage, velocity ratio, efficiency. Levers. Pulleys. Inclined plane. Screw-jack. Parallelogram of forces. Resultant. Components.	
6 Density • Forces due to Fluids	100
Density. Upthrust. Investigations. Archimedes' Principle. Measurement of density and relative density. Floating objects. Principle of Flotation. Balloons, ships, floating docks, submarines, Plimsoll line. Hydrometers.	
7 Pressure in Fluids	119
Pressure: meaning and units. Variation with depth and density. Some laws of pressure. Hydraulic press. Atmospheric pressure. Simple barometer. Units and magnitude of air pressure. Aneroid barometer. Siphon. Gas pressure. Boyle's law. Bicycle pump.	

MOLECULES AND MATTER**8 Molecules and Matter**

Solid, liquid and gaseous states. Size of molecules. Oil film. Diffusion of molecules. Osmosis. Brownian motion. Elasticity. Hooke's law. Friction: static and kinetic, advantages and disadvantages. Surface tension. Capillarity.

HEAT**9 Temperature and Thermometers**

Thermometers. Fixed points. Thermometer manufacture and calibration. Celsius and Kelvin scales. Alcohol, maximum and minimum, gas and thermoelectric thermometers.

10 Thermal Expansion of Solids and Liquids

Solids. Effects of expansion. Bimetal applications, thermostat. Linear expansivity. Determination. Formulae. Liquid and cubic expansivity. Hope's experiment. Volume and density variation of water.

11 Thermal Expansion of Gases

Gas laws. Volume expansion at constant pressure: experiment and coefficient. Absolute temperature. Pressure change at constant volume: experiment and coefficient. Constant-volume gas thermometer. General gas laws, $pV/T = \text{constant}$. Conversion to s.t.p. Kinetic theory explanation of gas laws.

12 Heat Capacity · Heat Energy

Joule as unit of heat. Electrical heating. Heat capacity, specific heat capacity. $Q = mct$. Calorimeters. Measurements. Molecular explanation of heat capacity. Transformation of energy and work into heat. Engines. Sun and energy transformation.

13 Latent Heat · Vapours

Latent heat of fusion. Molecular explanation. Melting point. Freezing and melting of water and ice. Regelation. Latent heat of vaporisation. Evaporation. Factors affecting evaporation. Molecular explanation. Refrigerator. Saturation vapour pressure. Molecular explanation. Boiling and s.v.p. Effect of pressure changes. Humidity. Wet-and-dry bulb hygrometer. Pressure cooker.

14 Transmission of Heat

Conduction. Molecular explanation. Metals and non-conductors. Conductivity of water. Ignition temperature. Convection currents in liquids. Hot-water system. Convection in gases. Land and sea breezes. Radiation. Emission and absorption. Infra-red radiation.

OPTICS**15 Straight-line Propagation of Light**

Luminous and non-luminous objects. Rays and beams of light. Shadows. Eclipses. Pin-hole camera.

141	16 Reflection at Plane Mirrors	259
142	Reflection of rays. Diffuse reflection. Laws of reflection. Periscopes. Formation of images: virtual and real images. Location of image. Lateral inversion. Inclined mirrors.	
	17 Curved Spherical Mirrors	268
167	Reflection of rays. Parabolic mirror. Centre and radius of curvature. Focal length. Images in curved mirrors. Real and virtual images. Ray drawings. Magnification. Convex mirror. Formulae.	
168		
	18 Refraction at Plane Surfaces	280
	Refraction in solids and liquids. Apparent depth. Partial immersion in water. Glass prism refraction. Laws. Refractive index. Total internal reflection. Critical angle. Total reflecting prisms. Mirages.	
175	19 Refraction through Lenses	300
	Converging (convex) and diverging (concave) lenses. Action on rays. Focal length of converging lens. Images in lenses. Magnifying lens. Magnification. Lens formulae.	
188	20 Applications of Lenses	313
	The eye. Binocular vision. Accommodation. Normal vision: near and far point. Defects of vision. Lens camera. Slide projector. Simple and compound microscope. Telescopes. Prism binoculars.	
	21 Colours of Light · The Spectrum	328
201	Colours in white light. Dispersion and recombination. Newton's colour disc. Formation of pure spectrum. Colours of objects. Additive and subtractive colour mixing. Ultra-violet and infra-red rays.	
	WAVES	340
	22 Wave Propagation · Wave Effects	341
214	Ripple tank. Water waves. Wavelength, frequency, velocity. Transverse and longitudinal waves. Sound, light, electromagnetic waves. Resonance. Reflection, refraction. Interference. Young's experiment. Stationary waves. Diffraction, diffraction grating.	
	SOUND	367
	23 Basic Principles of Sound · Strings and Pipes	368
234	Sound waves: rarefactions, compressions. Pitch, intensity, timbre. Echoes. Echo-sounding. Vibrations in strings. Sonometer. Closed pipe. Resonance tube experiment. velocity of sound.	
	ELECTRICITY	387
	24 Current, Potential Difference, Resistance	388
50	Electric current. Charge carriers. Conductors. Insulators. Semi-conductors. Ammeter. Potential difference. Voltmeter. Ohm's law. Fundamental formulae. Measurement of resistance. Effect of temperature. Resistances in series and parallel. Resistivity.	
51		

25 Batteries, E.M.F. and Circuits. Leclanché dry cell. Accumulator discharging. Voltaic cell. Simple cell. Leclanché p.d. Internal resistance. Series and parallel cells. Potentiometer. Circuit calculations.

424

26 Electrical Energy and Power. Electrical energy. $1/17$ Machines. Power. E.m.f. and energy. Electrical lamps. Kilowatt-hour. Heating effect-Joule's laws. Hot wire ammeter. High-voltage transmission. Domestic installations. Fuses.

439

27 Magnetism. Fundamental laws. Methods of making magnets. Demagnetisation. Materials. Ferrites. Magnetic fields. Neutral points. Induction. Shielding. Domain theory.

454

28 Magnetic Effect of a Current. Oersted's experiment. Forces due to magnetic fields. Straight wire, circular coil, solenoid. Electromagnets. Magnetic relay. Telecommunications. Moving iron ammeter.

465

29 Forces on Conductors. The Electric Motor. Interaction with magnetic fields. Rules for direction. Faraday motor. Rectangular coil and moving-coil instrument. Extension of range. Conversion to voltmeter. Motor and commutator. Loudspeaker. Forces between currents. Current balance.

478

30 Electromagnetic Induction. Induced e.m.f., current. Bicycle dynamo. Primary and secondary coils. Ignition coil. Faraday. Lenz. Speedometer. Fleming's rule. Simple dynamo. A.c. and d.c. Transformers. High-voltage transmission.

496

31 Chemical Effect of a Current. Electrolytes. Electrolysis. Hoffman voltmeter. Applications. Faraday's first law. Electrochemical equivalent. Ammeter calibration. Faraday's second law. Faraday constant. Ionic explanations.

509

32 Static Electricity. Capacitors. Positive and negative charges. Fundamental laws. Gold-leaf electroscope. Testing charges. Induction. Action at points. Electrophorus. Van de Graaff generator. Electric fields. Screening. Positive and negative potential. Earth potential. Effects of static electricity. Capacitance. Factors affecting capacitance. Units. Practical capacitors.

531

ATOMIC PHYSICS

532

33 Electrons and Electronics. Cathode rays. Thermionic emission. Hot cathodes. Diode valve. Rectification. Perrin tube. Fine beam tube. Electric and magnetic field effects. Cathode-ray tube. X-ray tube. Properties and nature of X-rays. Semiconductors. Electrons and holes. P- and n-type semiconductors. Junction diode. Transistor amplifier. Simple receiver.

34 Radioactivity. Geiger-Müller tube. Ionisation and decay. Half-life of neutrons. Atomic energy relation.

Answers to Even Multiple-choice
Revision Quest
Revision Paper
Mathematical
Index

34 Radioactivity · Atomic Structure · Nuclear Energy

556

Geiger-Müller tube and scaler. Alpha- and beta-particles, gamma-rays. Ionisation and penetrating powers. Diffusion cloud chamber. Random decay. Half-life period. Geiger and Marsden experiment. Protons and neutrons. Atomic structure. Transmutations. Isotopes. Einstein mass-energy relation. Nuclear fission. Nuclear fusion.
