Introduction to Solid State Physics

5th EDITION

C. KITTEL

Contents

GUIDE TO TABLES *xi*

SOME GENERAL REFERENCES *xiii*

- 1** Crystal structure *i*
- 2** Crystal diffraction and the reciprocal lattice 35
- 3** Crystal binding 71
- 4** Phonons I. Lattice vibrations 105
- 5** Phonons II. Thermal properties 125
- 6** Free electron Fermi gas 153
- 7** Energy bands 183
- 8** Semiconductor crystals 205
- 9** Fermi surfaces and metals 249
- 10** Plasmons, polaritons, and polarons 285
- 11** Optical properties and excitons 321
- 12** Superconductivity 355
- 13** Dielectrics and ferroelectrics 399
- 14** Diamagnetism and paramagnetism 433
- 15** Ferromagnetism and antiferromagnetism 457
- 16** Magnetic resonance and masers 497
- 17** Point defects and alloys 535
- 18** Dislocations 563

AUTHOR INDEX 589

SUBJECT INDEX 594

Guide to Tables

- 1.1 Fourteen lattice types in three dimensions 15
- 1.2 Characteristics of cubic lattices 16
- 1.3 Crystal structures of the elements 31
- 1.4 Density and atomic concentrations of the elements 32
- 3.1 Cohesive energies of the elements 74
- 3.2 Ionization energies of the elements 75
- 3.3 Properties of inert gas crystals 77
- 3.4 Bulk moduli and compressibilities of the elements 85
- 3.5 Electron affinities of negative ions 89
- 3.6 Properties of alkali halide crystals 92
- 3.7 Energy values for single covalent bonds 94
- 3.8 Fractional ionic character of bonds 95
- 3.9 Radii of alkali and halogen ions 98
- 3.10 Atomic and ionic radii 100
- 3.11 Use of standard radii of ions 101
- 5.1 Debye temperature and thermal conductivity 126
- 5.2 Phonon mean free paths 144
- 6.1 Free electron Fermi surface parameters for metals 154
- 6.2 Electronic heat capacity constant γ of metals 167
- 6.3 Electrical conductivity and resistivity of metals 170
- 6.4 Hall coefficients 176
- 6.5 Experimental Lorenz numbers 178
- 8.1 Energy gaps in semiconductors 210
- 8.2 Effective masses of electrons and holes in semiconductors 223
- 8.3 Carrier mobilities at room temperature 231
- 8.4 Static dielectric constant of semiconductors 233
- 8.5 Donor ionization energies 233
- 8.6 Acceptor ionization energies 234

- 8.7 Electron and hole concentrations in semimetals 238
- 10.1 Ultraviolet transmission of alkali metals 291
- 10.2 Volume plasmon energies 293
- 10.3 Lattice frequencies 309
- 10.4 Polaron coupling constants and masses 314
- 11.1 Exciton binding energy 333
- 12.1 Superconductivity parameters of the elements 356
- 12.2 Superconductivity of compounds 359
- 12.3 Energy gaps in superconductors 367
- 12.4 Isotope effect in superconductors 369
- 12.5 Coherence length and penetration depth 376
- 13.1 Electronic polarizabilities of ions 411
- 13.2 Ferroelectric crystals 415
- 13.3 Displacive structural phase transformations 417
- 13.4 Antiferroelectric crystals 424
- 14.1 Magnetron numbers for trivalent lanthanide group ions 442
- 14.2 Magnetron numbers for iron group ions 443
- 15.1 Critical point exponents for ferromagnets 461
- 15.2 Ferromagnetic crystals 465
- 15.3 Antiferromagnetic crystals 481
- 16.1 Nuclear magnetic resonance data 500
- 16.2 Knight shifts in NMR in metallic elements 515
- 17.1 Diffusion constants and activation energies 543
- 17.2 Activation energy for motion of a positive ion vacancy 544
- 17.3 Experimental F center absorption energies 547
- 17.4 Electron/atom ratios of electron compounds 553
- 18.1 Elastic limit and shear modulus 566
- 18.2 Methods for estimating dislocation densities 578
