

ADVANCED PHYSICS

M. Nelkon & M. Detheridge

THE COMPLETE GUIDE TO EXAM SUCCESS AT **A** LEVEL,
SCOTTISH HIGHER AND IRISH LEAVING CERTIFICATE

6516

PAN STUDY AIDS

CONTENTS

	Acknowledgements	9
	The Examination Boards	9
	To the reader	10
1 ♦	Mechanics: motion, force, momentum, energy	13
	Equations of linear motion	15
	Force, acceleration and momentum	18
	Work, energy and power	22
	Worked examples on motion, force, momentum and energy	26
2 ♦	Circular motion, gravitation, simple harmonic motion and rotational dynamics	41
	Circular motion	43
	Worked examples on circular motion	46
	Gravitation	48
	Worked examples on gravitation	52
	Simple harmonic motion (s.h.m.)	54
	Worked examples on s.h.m.	61
	Rotational dynamics	62
	Worked examples on rotational dynamics	68
3 ♦	Static electricity	77
	Charge: forces, field and potential	79
	Capacitance	85
	Worked examples	92

4	Current electricity	
	Charge, current and potential difference	111
	Electrical power and energy	112
	Resistance	113
	E.m.f. and internal resistance	115
	The potentiometer	118
	Worked examples	122

5	Electromagnetism	
	Force on wires and moving changes in magnetic fields	139
	Electromagnetic induction	143
	Field produced by currents	150
	Inductance and a.c. circuits	154
	Worked examples	162

6	Geometrical optics	
	Refraction at plane surfaces	179
	Lenses	184
	Worked examples on lenses	187
	Optical instruments	188
	Worked examples on telescopes	193

7	Waves, light and sound	
	Types and speeds of waves	203
	Properties of waves	206
	Interference with light waves	211

Diffraction of light 217
Polarization of light 220
Uses of polaroids 221
Sound waves 222
Doppler effect 229
Electromagnetic waves 230
Worked examples 232

249

8 ♦

Electron physics and electronics

Production and properties of electrons 251
The cathode-ray oscilloscope 257
Electronics 260
Digital and analogue circuits 269
Worked examples 284

9 ♦

Atomic and nuclear physics

Quanta of energy 303
The nuclear atom and radioactivity 310
Nuclear structure 315
Worked examples 321

301

10 ♦

Heat energy: gases; heat capacities of gases; thermodynamics

Gas laws 337
Worked examples on gas law 340
Kinetic theory of ideal gas 342
Worked examples on kinetic theory 348

335

Heat capacities of gases; thermodynamics 349
Worked example on molar heat capacity, external work
and internal energy change 355

11 ♦

Thermometry; heat energy and transfer

Thermometry 367

Worked examples on temperature using
gas thermometer and resistance thermometer 371

Heat energy: heat capacity and latent heat capacity 372

Worked examples on heat capacity, electrical heating
and constant flow tube experiment 375

Latent heat 376

Heat transfer: conduction 378

Worked examples on conduction in series conductors
and in double glazing 383

12 ♦

Elasticity; Young modulus; solid materials; molecules

Elasticity and Young modulus 393

Worked examples on elasticity and Young modulus 397

Solid materials 398

Molecular potential energy and force 401

Viscosity or fluid friction 402

Worked examples on viscosity 405

Answers to exercises 415

Index 419
