

PHYSICS

SAMUEL A. MARANTZ

BENZIGER BROTHERS • NEW YORK

CONTENTS

PREFACE

<i>1. The Starting Point of Physics: Kinematics</i>	1
1.1 Motion	1
1.2 The Primitive Concepts of Kinematics	2
1.3 The Standard of Length	3
1.4 The Standard of Time	4
1.5 Space and Time Intervals	7
1.6 Average Speed as Defined in Physics	8
1.7 Instantaneous Speed	11
 <i>2. Graphic Methods in Physics</i>	 19
2.1 The Presentation of Experimental Results	19
2.2 Graph Construction Procedure	21
2.3 Interpretation of the Distance-Time Graph	22
2.4 Sign Conventions	24
2.5 Detailed Information from Uniform Speed Graphs	27
2.6 Graphs of Nonuniform Motion on s vs t Axes	27

3. Variable Speed: One Type of Acceleration	38
3.1 The Galilean Definition of Acceleration	38
3.2 Acceleration Calculated from Speed-Time Graphs	42
3.3 Units and Dimensional Analysis	46
3.4 Interpreting Speed-Time Graphs	49
3.5 Mathematics of Accelerated Motion	54
3.6 Graphs of the Galilean Equations	56
3.7 More General Equations: Nonzero Initial Speed	59
 4. Varieties of Physical Concepts: Scalars and Vectors	 71
4.1 What Is a Vector?	71
4.2 Vector Addition: The Parallelogram Law	75
4.3 Vector Components: Resolution of Vectors	84
4.4 Applications of Vector Methods	87
Calculation of displacement. Location of position. Calculation of average velocity. Relative velocities—parallel motion. Relative velocities—nonparallel motion. Acceleration vectors.	
4.5 Summary of Vector Properties	91
 5. Dynamics: The Physics of Motion	 98
5.1 From Kinematics to Dynamics	98
5.2 The First Law of Motion: Inertia	100
5.3 The Concept of Mass and the International Standard	101
5.4 The Second Law of Motion: Definition of Force	104
5.5 The Third Law of Motion: Forces Exist in Balanced Pairs	108
5.6 Implications of the Laws of Motion	109
The meaning of equilibrium. Weight and mass. The force of friction.	
5.7 Applying the Laws of Motion	111
Forces on mass lying on horizontal plane. Forces on accelerating space vehicle. Motion against frictional forces. Forces on elevator car. Force components. Forces on mass resting on inclined plane. Mass moving down inclined plane. Action-reaction pairs. Momentum vectors.	

6. <i>The Postulate of Universal Gravitation</i>	130
6.1 The Gravitational Force	130
6.2 Inertial Mass and Gravitational Mass	132
6.3 Newton's Concept of Gravitation	135
6.4 Implications of the Law of Universal Gravitation	139
Variation of gravitational force with distance. Gravitational acceleration g at various heights. Weight and weightlessness.	
6.5 The Universal Gravitation Constant G	144
6.6 The Gravitational Field	146
6.7 The Law of Conservation of Momentum	148
6.8 Applications of the Law of Conservation of Momentum	151
Velocity of spaceman. Velocities in collisions. Atomic disintegrations. Predicting velocity change. Two-dimensional applications. Forces calculated from momentum change.	
6.9 The Center of Mass Concept	157
7. <i>Work and Energy</i>	168
7.1 Measuring the Effect of a Force	168
7.2 The Meaning of Work in Physics	170
7.3 What Is Energy?	173
7.4 The Energy Conservation Postulate	178
7.5 Gravitational Fields from the Energy Point of View	183
7.6 Using Work and Energy Concepts	187
Calculation of momentum from kinetic energy. Energy relations during collisions. Derivation of Archimedes Principle from the Law of Conservation of Energy. Analysis of machines. Rate of performance of work. The energy level concept. Potential and potential energy at earth's surface—escape velocity.	
8. <i>Periodic Motion: Space Physics</i>	207
8.1 Uniform Circular Motion	207
8.2 Kepler's Laws of Planetary Motion	213
8.3 Newton Explains Kepler's Laws	215

8.4	The Concept of Angular Momentum: An Additional Conservation Law	220
8.5	Simple Harmonic Motion	226
8.6	The Pendulum	233
8.7	Problems Involving Periodic Motion	235
	Turning a car vs turning an airplane. Period of an asteroid. Synchronous satellite. Finding inertial mass. Length of a pendulum.	
9.	<i>The Physics of Heat</i>	250
9.1	The Beginnings of a Science of Heat	250
9.2	Thermometry	252
9.3	Joseph Black's Quantitative Experiments	256
9.4	Heat Transfer Involving No Temperature Change	259
9.5	The Nature of Heat	260
9.6	Applying the Concepts of Temperature and Heat	264
	Errors in thermometry. Changes of dimension with temperature. Calorimetry—the science of heat measurement. Methods of heat transfer. Determination of internal energy. Heat engines.	
10.	<i>The Microstructure of Matter: Kinetic Theory</i>	282
10.1	Early Theories of the Structure of Matter	282
10.2	Experiments on the Properties of Gases	283
10.3	The Beginnings of Modern Molecular Theory	289
10.4	Deductions from Kinetic-Molecular Theory	293
10.5	The Concept of the Ideal Gas	297
10.6	The Laws of Thermodynamics	300
11.	<i>Motion in the Form of Waves</i>	316
11.1	Introductory Ideas about Waves	316
11.2	Typical Wave Behavior	321
	Reflection of waves from a surface. Refraction of waves. Diffraction of waves. Superposition of waves.	
11.3	How Waves Are Produced	329

11.4	Graphic Representation of Waves	335
11.5	The Doppler Effect	338
11.6	Energy Transport by Waves	340
12.	<i>Sound as Wave Motion</i>	348
12.1	Early Studies of Sound Phenomena	348
12.2	The Elements of Acoustics	349
	Generation of sound waves. The propagation of sound. Sound receivers or detectors.	
12.3	Interactions of Sound Waves	357
12.4	Sound and Hearing	361
12.5	Ultrasonics	366
13.	<i>The Behavior of Light: Ray Optics</i>	376
13.1	Early Studies in Light: Reflection	376
13.2	Studies in Light: Refraction	381
13.3	Applications of Geometric Optics	391
	The simple magnifying glass. Concave reflectors. Spectacles and defective vision. The camera. Using the Gaussian lens formula.	
14.	<i>The Behavior of Light: Physical Optics</i>	403
14.1	What Is Light?	403
14.2	The Speed of Light	407
14.3	Diffraction and Interference of Light	410
14.4	The Light Spectrum and the Meaning of Color	422
14.5	The Transverse Nature of Light Waves: Polarization	425
14.6	The Energy and Momentum of Light	430
14.7	Applications of the Laws of Physical Optics	431
	Interferometry. The magnification limit of optical instruments. Diffraction gratings. The laser.	
15.	<i>The Evolution of Electrical Science</i>	446
15.1	Early Observations of Electrical Phenomena	446

15.2	The Beginnings of Quantitative Observations	452
15.3	Electricity and Matter	455
15.4	The Concept of Electric Field	457
15.5	Graphic Representation of Electric Fields	461
15.6	Working with Electric Forces and Fields	463
	The role of the earth in electrical applications. The Faraday "ice-pail" experiment. Determining electric force and charge from vector considerations. Behavior of neutral bodies in electric fields. Calculation of Avogadro's number N_A from electron charge. Lines of force as a measure of enclosed charge.	
16.	<i>Electricity and Energy</i>	481
16.1	Electrical Potential and Electrical Potential Energy	481
16.2	Graphic Representation of Potential	485
16.3	The Uniform Electric Field: The Capacitor	488
16.4	Electric Fields in Matter	494
16.5	The Electric Circuit	501
	Parallel circuits. Series circuits. Series-parallel circuits.	
16.6	Electrochemistry	515
17.	<i>The Magnetic Field</i>	529
17.1	Early Observations on Magnetism	529
17.2	Defining the Magnetic Field	532
17.3	Charged Particles and Currents in Magnetic Fields	540
17.4	The Origin of Magnetic Fields	547
17.5	Faraday's Law of Electromagnetic Induction	557
17.6	What Is a Magnet?	564
18.	<i>Applications of Electric and Magnetic Fields</i>	581
18.1	Electromagnetic Waves: Maxwell and Hertz	581
18.2	The Discovery of the Electron	590

18.3	Electric and Magnetic Fields in Atomic Research	598
18.4	Fields in Electrical Technology	613
	Power transmission and utilization. Communications and information transmissions.	
18.5	Fields on a Cosmic Scale	617
19.	<i>The Evolution of Quantum Theory</i>	628
19.1	The Quanta of Action and Energy	628
19.2	From Quantum to Photon	634
19.3	Further Successes of the Quantum Postulate	644
19.4	The Wave Nature of Particles	649
20.	<i>The Development of Atomic Theory</i>	660
20.1	Evidence of Internal Atomic Structure	660
20.2	Bohr's Quantum Theory of the Atom	664
20.3	Successes of the Bohr "Primitive" Atom Model	668
20.4	Extension of Bohr Theory to Other Atoms	676
20.5	The Abstract, Nonpictorial Quantum Theory	684
21.	<i>Nuclear Physics and the Ultimate Structure of Matter</i>	701
21.1	Evidence of the Complexity of the Nucleus	702
21.2	Nuclear Disintegration: Spontaneous and Induced	707
21.3	The Development of Nuclear Theories: "Elementary" Particles	717
21.4	Utilization of Nuclear Reactions	732
	Energy from nuclear disintegration. The synthesis of atomic nuclei.	
21.5	New Perspectives in Physics—The Future	741
APPENDIX		751
