PREFACE TO THE SECOND EDITION	xi
-------------------------------	----

PREFACE TO THE FIRST EDITION	xiii
------------------------------	------

INTRODUCTION	1
--------------	---

1. Physics and Geometry	1
2. The Choice of Riemannian Geometry	7

CHAPTER	TENSOR ALGEBRA	17
---------	----------------	----

1	1.1 Definition of Scalars, Contravariant Vectors, and Covariant Vectors	18
	1.2 Einstein's Summation Convention	20
	1.3 Definitions of Tensors	21
	1.4 Tensor Algebra	24
	1.5 Decomposition of a Tensor into a Sum of Vector Products	25
	1.6 Contraction of Indices	28
	1.7 The Quotient Theorem	29
	1.8 Lowering and Raising of Indices—Associated Tensors	30
	1.9 Connection with Vector Calculus in Euclidean Space	32
	1.10 Connection between Bilinear Forms and Tensor Calculus	36

CHAPTER 2 VECTOR FIELDS IN AFFINE AND RIEMANN SPACE 41

- 2.1 Vector Transplantation and Affine Connections 42
- 2.2 Parallel Displacement—Christoffel Symbols 50
- 2.3 Geodesics in Affine and Riemann Space 53
- 2.4 Gaussian Coordinates 61

CHAPTER 3 TENSOR ANALYSIS 67

- 3.1 Covariant Differentiation 67
- 3.2 Applications of Tensor Analysis 75
- 3.3 Symmetric and Antisymmetric Tensors 80
- 3.4 Closed and Exact Tensors 87
- 3.5 Tensor Densities—Dual Tensors 90
- 3.6 Vector Fields on Curves 94
- 3.7 Intrinsic Symmetries and Killing Vectors 98

CHAPTER 4 TENSORS IN PHYSICS 105

- 4.1 Maxwell's Equations in Tensor Form 105
- 4.2 Proper-Time and the Equations of Motion via an Example in Relativistic Mechanics 120
- 4.3 Gravity as a Metric Phenomenon 131
- 4.4 The Red Shift 135

CHAPTER 5 THE GRAVITATIONAL FIELD EQUATIONS IN FREE SPACE 145

- 5.1 Criteria for the Field Equations 145
- 5.2 The Riemann Curvature Tensor 147
- 5.3 Symmetry Properties of the Riemann Tensor 151
- 5.4 The Bianchi Identities 155
- 5.5 Integrability and the Riemann Tensor 157
