Introduction	I
CHAPTER 1. THE ORIGIN AND STRUCTURE OF THE OCEAN BASINS AND THEIR WATER	
Introduction	4
1. The character of the major structural units of the Earth ..	4
(a) Methods of investigation	7
i. Seismic studies	7
ii. Gravity surveys	8
iii. Magnetic studies	9
iv. Heat-flow studies	10
(b) The Pacific Ocean	11
(c) The Atlantic Ocean	13
(d) The Indian Ocean	16
2. The permanency of the ocean basins	16
(a) Theories of permanency	17
(b) Theories of drifting continents and changing oceans ..	20
3. The origin of the ocean water	23
4. Changes in sea-level during the Tertiary and Quaternary periods	24
(a) Tertiary changes	25
(b) Pleistocene changes	27
(c) Late and post-glacial changes	29
(d) Present trends in sea-level changes	33
References	34
CHAPTER 2. THE GEOMORPHOLOGY OF THE OCEAN FLOOR	
Introduction	36
1. The abyssal plain and abyssal hills	37
2. Deep-sea trenches and island arcs	38
3. Submarine ridges	43
4. The continental slope and continental rise	46

5. The continental shelf	54
(a) Shelf types	54
i. Glaciated shelves	54
ii. Large river shelves	54
iii. Other shelf types	55
(b) The origin of the shelf	55
(c) The southern Californian borderland	56
(d) The continental shelf and adjacent shallow basins around Britain	57
i. Continental shelf	60
ii. Adjacent shallow sea areas	60
6. Other submarine features	61
(a) Submarine canyons	63
i. Distribution	64
ii. Types of canyons	64
iii. Examples of submarine canyons	64
iv. Origin of submarine canyons	64
(b) Sea-mounts and guyots	67
(c) Coral atolls and other reefs	69
References	72
	76

CHAPTER 3. THE WATER OF THE OCEANS

Introduction	79
1. Oceanographical instruments	80
2. The characteristics of sea water	81
(a) Temperature of the ocean water	82
(b) Salinity of the surface water	86
(c) Oxygen content of the ocean water	89
3. Water masses	90
(a) Definition and concept	90
(b) Method of formation and character of the major surface water masses	94
i. North Atlantic Central Water	95
ii. South Atlantic Central Water	98
iii. Arctic Surface Water	99
iv. Subantarctic Water	99
v. North Pacific Subarctic Water	99
vi. Pacific Central Waters	99
vii. Pacific Equatorial Water	100
viii. Indian Central Water	100
ix. Indian Equatorial Water	101
x. Antarctic Surface Water	101
xi. Circumpolar Water	102

Contents

ix

(c) Deeper-water masses	103
i. Antarctic Intermediate Water	103
ii. North Atlantic Intermediate Water	105
iii. Pacific Intermediate Water	105
vi. Mediterranean Water	105
v. North Atlantic Deep Water	107
vi. Deep Water of the Pacific	108
vii. Antarctic Bottom Water	109
4. Ice in the ocean	110
(a) Ice-bergs	110
(b) Sea-ice or pack-ice	111
References	113

CHAPTER 4. THE CIRCULATION OF THE OCEANS

Introduction	115
1. Causes and character of the ocean currents	115
2. The surface currents	123
(a) The currents of the North Atlantic Ocean	123
i. North Equatorial Current	123
ii. Equatorial Counter-current and South Equatorial Current	123
iii. The Gulf Stream System	126
(b) The currents of the South Atlantic Ocean	133
i. Benguela Current	133
ii. Brazil Current	133
(c) The currents of the Southern or Antarctic Ocean	134
(d) The currents of the Indian Ocean	135
(e) The currents of the Pacific Ocean	136
i. South Pacific currents	136
ii. Equatorial currents of the Pacific	138
iii. Currents of the North Pacific	140
3. Deep-water circulation	142
(a) Theoretical analysis	142
(b) Observations	146
(c) The deep-water circulation of the oceans	148
i. The Atlantic Ocean	148
ii. The Southern Ocean	152
iii. The Pacific Ocean	152
vi. The Indian Ocean	153
v. General conclusions	154
References	155

CHAPTER 5. THE TIDE

Introduction	157
1. Tide-producing forces	157
2. Types of wave motion in tidal theory	162
(a) Progressive wave	162
(b) Stationary wave or standing oscillation	163
3. The effect of the rotation of the Earth—Amphidromic systems	166
4. The response of the oceans to the tide-producing forces	168
(a) Early ideas of oceanic tides	168
(b) Types of oceanic tides	170
(c) Tides in gulfs and seas	174
(d) Tides around the British Isles	176
5. Tidal currents and their channels	181
6. Tides in rivers—tidal bores	185
7. Abnormal tides—meteorological surges	189
References	194

CHAPTER 6. WAVES

Introduction	196
1. Ideal waves in deep water	196
2. Waves in shallow water	199
(a) Modification of ideal waves in shallow water	199
(b) Mass transport in shallow water	200
(c) Wave refraction	202
(d) Longshore currents and offshore rip currents	205
(e) Breaking waves	207
(f) The reflection and diffraction of waves	208
(g) The effect of waves on structures	210
(h) Solitary waves	211
3. Wave spectra and wave generation—'Sea'	211
4. Wave attenuation—'Swell'	218
5. Wave observations	224
6. Wave forecasting	224

7. Long waves and seismic waves (tsunami)	228
(a) Long waves or surf beat	228
(b) Microseisms	229
(c) Seismic waves (tsunami)	229
References	231

CHAPTER 7. SEDIMENT IN THE OCEAN

Introduction	233
1. Classification of oceanic sediment	233
2. The character of the ocean sediments	235
(a) Pelagic sediments	235
The organic oozes—Calcareous oozes	235
Siliceous oozes	237
Inorganic deposits—Red Clay	239
Rate of deposition	241
Atlantic sedimentary types	243
(b) Nearshore sedimentation	246
(c) The formation of petroleum in ocean sediments	252
3. Distribution of sedimentary types	253
4. The analysis of deep-sea sediment cores	256
References	263

CHAPTER 8. SOME ASPECTS OF LIFE IN THE OCEAN

Introduction	264
1. The basis of marine life	264
(a) Phytoplankton	264
(b) Zooplankton	269
2. The life on the ocean floor—Benthos	272
3. Demersal fish	276
4. Pelagic fish	282
5. The marine mammals—whales and whaling	288
6. Some aspects of fishing and overfishing	292
7. The total organic production of the sea and the food pyramid	301
References	302
