

Theory of Econometrics

2nd Edition

Theory of Econometrics

An Introductory Exposition of Econometric
Methods

Second Edition

A. KOUTSOYIANNIS

Professor of Economics, University of Ottawa, Ontario

15265

15266

Contents

<i>Foreword</i>	vii
<i>Preface to the Second Edition</i>	xiv
<i>Preface to the First Edition</i>	xv

PART ONE

CORRELATION THEORY THE SIMPLE LINEAR REGRESSION MODEL

1	DEFINITION, SCOPE AND DIVISION OF ECONOMETRICS	3
1.1	Definition and scope of econometrics	3
1.2	Goals of econometrics	8
1.3	Division of econometrics	9
2	METHODOLOGY OF ECONOMETRIC RESEARCH	11
2.1	Stage A. Specification of the model	12
2.2	Stage B. Estimation of the model	16
2.3	Stage C. Evaluation of the parameter estimates	25
2.4	Stage D. Evaluation of the forecasting power of the model	28
2.5	Desirable properties of an econometric model	29
3	CORRELATION THEORY	31
3.1	General notes	31
3.2	A measure of linear correlation: the correlation coefficient	32
3.3	Numerical values of the correlation coefficient	37
3.4	The rank correlation coefficient	40
3.5	Partial correlation coefficients	42
3.6	Limitations of the theory of linear correlation	43
4	THE SIMPLE LINEAR REGRESSION MODEL THE ORDINARY LEAST SQUARES METHOD (OLS)	48
4.1	The simple linear regression model	48
4.2	Assumptions of the linear stochastic regression model	55
4.3	The distribution of the dependent variable Y	58

- 4.4 The least squares equations of OLS
- 4.5 Estimation of a function whose intercept is zero
- 4.6 Estimation of elasticities from an estimated regression line

5 STATISTICAL TESTS OF SIGNIFICANCE OF THE ESTIMATES

- 5.1 The test of the goodness of fit with r^2
- 5.2 Tests of significance of the parameter estimates
- 5.3 Confidence intervals of the parameters
- 5.4 Test of significance for the sample correlation coefficient
- 5.5 A note on the importance of the statistical tests of significance

6 PROPERTIES OF THE LEAST SQUARES ESTIMATES

- 6.1 Desirable properties of estimators
- 6.2 Properties of the least squares estimators

7 MULTIPLE REGRESSION AND OTHER EXTENSIONS OF THE SIMPLE LINEAR REGRESSION MODEL

- 7.1 Model with two explanatory variables
- 7.2 The general linear regression model
- 7.3 Partial correlation coefficients
- 7.4 Extension of the linear regression model to nonlinear relationships

8 REGRESSION AND ANALYSIS OF VARIANCE

- 8.1 The method of analysis of variance as a statistical method
- 8.2 Regression analysis and analysis of variance
- 8.3 Comparison of regression analysis and analysis of variance
- 8.4 Testing the overall significance of a regression
- 8.5 Testing the improvement of fit from additional regressors
- 8.6 Test of equality between coefficients from different samples
- 8.7 Test of stability of regression coefficients to sample size
- 8.8 Test of restrictions imposed on the relationship between two or more parameters

PART TWO

ECONOMETRIC PROBLEMS

SECOND-ORDER TESTS OF THE ASSUMPTIONS OF THE LINEAR REGRESSION MODEL

9 THE ASSUMPTIONS OF RANDOMNESS, ZERO MEAN, CONSTANT VARIANCE AND NORMALITY OF THE DISTURBANCE VARIABLE u

9.1	The assumption of randomness of u	179
9.2	The assumption of zero mean of u	179
9.3	The assumption of homoscedasticity	181
9.4	The assumption of normality of u	196
10	AUTOCORRELATION	200
10.1	The assumption of serial independence	200
10.2	Sources of autocorrelation	203
10.3	Plausibility of the assumption	204
10.4	The first-order autoregressive scheme	205
10.5	Consequences of autocorrelation	208
10.6	Tests for autocorrelation	211
10.7	Solutions for the case of autocorrelation	217
10.8	Methods for estimating the autocorrelation parameters	221
10.9	Summary and conclusions	225
10.10	Prediction from autocorrelated functions	229
11	MULTICOLLINEARITY	233
11.1	The assumption of non-multicollinear regressors	233
11.2	Plausibility of the assumption	234
11.3	Consequences of multicollinearity	234
11.4	Tests for detecting multicollinearity	238
11.5	Solutions for multicollinearity	249
11.6	Multicollinearity and prediction	252
11.7	Multicollinearity and identification	252
11.8	Mis-specification in variables: specification bias	253
12	ERRORS IN VARIABLES, TIME AS A VARIABLE, DUMMY VARIABLES, GROUPED DATA	258
12.1	Errors in variables	258
12.2	Time as a variable	279
12.3	Dummy variables	281
12.4	Estimation from grouped data	285
13	LAGGED VARIABLES AND DISTRIBUTED-LAG MODELS	294
13.1	Exogenous lagged variables	296
13.2	Endogenous lagged variables	304
13.3	Methods of estimation of lagged models	319

PART THREE

MODELS OF SIMULTANEOUS RELATIONSHIPS

14 SIMULTANEOUS-EQUATION MODELS

14.2	Consequences of simultaneous relations	331
14.3	Solution to the simultaneous-equation bias	332
14.4	Some definitions	335
14.5	Level of aggregation – number of equations – number of variables	336

15 IDENTIFICATION

15.1	The problem of identification	342
15.2	Implications of the identification state of a model	346
15.3	Formal rules for identification	346
15.4	Identifying restrictions	351
15.5	Tests for identifying restrictions	351
15.6	Identification and multicollinearity	361
15.7	Identification and choice of econometric method	364

16 SIMULTANEOUS-EQUATION METHODS

16.1	Reduced-form method or Indirect Least Squares (ILS)	369
16.2	The method of Instrumental Variables (IV)	369
16.3	Two-stage Least Squares (2SLS)	376
16.4	'k-class' Estimators	384

17 MIXED ESTIMATION METHODS

THE METHOD OF PRINCIPAL COMPONENTS

17.1	Mixed Estimation Methods: general notes	396
17.2	Restricted Least Squares (RLS)	399
17.3	Pooling cross-section and time-series data	402
17.4	Durbin's Generalised Least Squares	408
17.5	Theil and Goldberger's Mixed Linear Estimation	414
17.6	The method of Principal Components	424

18 MAXIMUM LIKELIHOOD METHODS

18.1	Introduction to maximum likelihood estimation	437
18.2	Maximum likelihood applied to a linear regression model	437
18.3	Maximum likelihood and transformation of variables	441
18.4	Limited Information Maximum Likelihood (LIML)	444
18.5	Full Information Maximum Likelihood (FIML)	449

19 THREE-STAGE LEAST SQUARES

19.1	Generalised Least Squares revisited (GLS)	471
19.2	Three-stage Least Squares (3SLS)	474

TESTING THE FORECASTING POWER OF AN ESTIMATED MODEL

20.1	Forecasting with a single-equation linear regression model	479
20.2	Forecasting with a multi-equation econometric model	484
20.3	Testing the difference between a single prediction and realisation	488
20.4	Evaluation of the forecasting power of a model	490
21	CHOICE OF ECONOMETRIC TECHNIQUE. MONTE CARLO STUDIES	498
21.1	General notes	498
21.2	Ranking of econometric techniques according to the properties of the estimates of structural parameters	501
21.3	Ranking of econometric techniques according to the properties of the 'reduced-form' parameters	509
21.4	General conclusions	510
	APPENDIX I: Elements of Statistical Theory	513
	APPENDIX II: Determinants and the solution of systems of equations	573
	APPENDIX III: Exercises and Questions	587
	APPENDIX IV: Statistical tables	65
	SELECT BIBLIOGRAPHY	66
	INDEX	6
