FUNDAMENTAL METHODS OF Mathematical Economics

FOURTH EDITION

15188

**ALPHA C. CHIANG
KEVIN WAINWRIGHT**

Contents

PART ONE

INTRODUCTION 1

Chapter 1

The Nature of Mathematical Economics 2

- 1.1 Mathematical versus Nonmathematical Economics 2
- 1.2 Mathematical Economics versus Econometrics 4

Chapter 2

Economic Models 5

- 2.1 Ingredients of a Mathematical Model 5
 - Variables, Constants, and Parameters* 5
 - Equations and Identities* 6
- 2.2 The Real-Number System 7
- 2.3 The Concept of Sets 8
 - Set Notation* 9
 - Relationships between Sets* 9
 - Operations on Sets* 11
 - Laws of Set Operations* 12
 - Exercise 2.3* 14
- 2.4 Relations and Functions 15
 - Ordered Pairs* 15
 - Relations and Functions* 16
 - Exercise 2.4* 19
- 2.5 Types of Function 20
 - Constant Functions* 20
 - Polynomial Functions* 20
 - Rational Functions* 21
 - Nonalgebraic Functions* 23
 - A Digression on Exponents* 23
 - Exercise 2.5* 24
- 6 Functions of Two or More Independent Variables 25
- 7 Levels of Generality 27

PART TWO

STATIC (OR EQUILIBRIUM) ANALYSIS 29

Chapter 3

Equilibrium Analysis in Economics 30

- 3.1 The Meaning of Equilibrium 30
- 3.2 Partial Market Equilibrium—A Linear Model 31
 - Constructing the Model* 31
 - Solution by Elimination of Variables* 33
 - Exercise 3.2* 34
- 3.3 Partial Market Equilibrium—A Nonlinear Model 35
 - Quadratic Equation versus Quadratic Function* 35
 - The Quadratic Formula* 36
 - Another Graphical Solution* 37
 - Higher-Degree Polynomial Equations* 38
 - Exercise 3.3* 40
- 3.4 General Market Equilibrium 40
 - Two-Commodity Market Model* 41
 - Numerical Example* 42
 - n-Commodity Case* 43
 - Solution of a General-Equation System* 44
 - Exercise 3.4* 45
- 3.5 Equilibrium in National-Income Analysis 46
 - Exercise 3.5* 47

Chapter 4

Linear Models and Matrix Algebra 48

- 4.1 Matrices and Vectors 49
 - Matrices as Arrays* 49
 - Vectors as Special Matrices* 50
 - Exercise 4.1* 51
- 4.2 Matrix Operations 51
 - Addition and Subtraction of Matrices* 51
 - Scalar Multiplication* 52

	<i>Multiplication of Matrices</i>	53
	<i>The Question of Division</i>	56
	<i>The Σ Notation</i>	56
	<i>Exercise 4.2</i>	58
4.3	Notes on Vector Operations	59
	<i>Multiplication of Vectors</i>	59
	<i>Geometric Interpretation of Vector Operations</i>	60
	<i>Linear Dependence</i>	62
	<i>Vector Space</i>	63
	<i>Exercise 4.3</i>	65
4.4	Commutative, Associative, and Distributive Laws	67
	<i>Matrix Addition</i>	67
	<i>Matrix Multiplication</i>	68
	<i>Exercise 4.4</i>	69
4.5	Identity Matrices and Null Matrices	70
	<i>Identity Matrices</i>	70
	<i>Null Matrices</i>	71
	<i>Idiosyncrasies of Matrix Algebra</i>	72
	<i>Exercise 4.5</i>	72
4.6	Transposes and Inverses	73
	<i>Properties of Transposes</i>	74
	<i>Inverses and Their Properties</i>	75
	<i>Inverse Matrix and Solution of Linear-Equation System</i>	77
	<i>Exercise 4.6</i>	78
4.7	Finite Markov Chains	78
	<i>Special Case: Absorbing Markov Chains</i>	81
	<i>Exercise 4.7</i>	81

Chapter 5 Linear Models and Matrix Algebra (Continued) 82

5.1	Conditions for Nonsingularity of a Matrix	82
	<i>Necessary versus Sufficient Conditions</i>	82
	<i>Conditions for Nonsingularity</i>	84
	<i>Rank of a Matrix</i>	85
	<i>Exercise 5.1</i>	87
5.2	Test of Nonsingularity by Use of Determinant	88
	<i>Determinants and Nonsingularity</i>	88
	<i>Evaluating a Third-Order Determinant</i>	89
	<i>Evaluating an nth-Order Determinant by Laplace Expansion</i>	91
	<i>Exercise 5.2</i>	93

5.3	Basic Properties of Determinants	94
	<i>Determinantal Criterion for Nonsingularity</i>	96
	<i>Rank of a Matrix Redefined</i>	97
	<i>Exercise 5.3</i>	98
5.4	Finding the Inverse Matrix	99
	<i>Expansion of a Determinant by Alien Cofactors</i>	99
	<i>Matrix Inversion</i>	100
	<i>Exercise 5.4</i>	102
5.5	Cramer's Rule	103
	<i>Derivation of the Rule</i>	103
	<i>Note on Homogeneous-Equation Systems</i>	10
	<i>Solution Outcomes for a Linear-Equation System</i>	106
	<i>Exercise 5.5</i>	107
5.6	Application to Market and National-Income Models	107
	<i>Market Model</i>	107
	<i>National-Income Model</i>	108
	<i>IS-LM Model: Closed Economy</i>	109
	<i>Matrix Algebra versus Elimination of Variables</i>	111
	<i>Exercise 5.6</i>	111
5.7	Leontief Input-Output Models	112
	<i>Structure of an Input-Output Model</i>	112
	<i>The Open Model</i>	113
	<i>A Numerical Example</i>	115
	<i>The Existence of Nonnegative Solutions</i>	116
	<i>Economic Meaning of the Hawkins-Simon Condition</i>	118
	<i>The Closed Model</i>	119
	<i>Exercise 5.7</i>	120
5.8	Limitations of Static Analysis	120

PART THREE COMPARATIVE-STATIC ANALYSIS 123

Chapter 6 Comparative Statics and the Concept of Derivative 124

6.1	The Nature of Comparative Statics	124
6.2	Rate of Change and the Derivative	125
	<i>The Difference Quotient</i>	125

- The Derivative* 126
Exercise 6.2 127
- 6.3 **The Derivative and the Slope of a Curve** 128
- 6.4 **The Concept of Limit** 129
Left-Side Limit and Right-Side Limit 129
Graphical Illustrations 130
Evaluation of a Limit 131
Formal View of the Limit Concept 133
Exercise 6.4 135
- 6.5 **Digression on Inequalities and Absolute Values** 136
Rules of Inequalities 136
Absolute Values and Inequalities 137
Solution of an Inequality 138
Exercise 6.5 139
- 6.6 **Limit Theorems** 139
Theorems Involving a Single Function 139
Theorems Involving Two Functions 140
Limit of a Polynomial Function 141
Exercise 6.6 141
- 6.7 **Continuity and Differentiability of a Function** 141
Continuity of a Function 141
Polynomial and Rational Functions 142
Differentiability of a Function 143
Exercise 6.7 146

Chapter 7

Rules of Differentiation and Their Use in Comparative Statics 148

- 7.1 **Rules of Differentiation for a Function of One Variable** 148
Constant-Function Rule 148
Power-Function Rule 149
Power-Function Rule Generalized 151
Exercise 7.1 152
- 7.2 **Rules of Differentiation Involving Two or More Functions of the Same Variable** 152
Sum-Difference Rule 152
Product Rule 155
Finding Marginal Revenue Function from Average-Revenue Function 156
Quotient Rule 158
Relationship Between Marginal-Cost and Average-Cost Functions 159
Exercise 7.2 160

- 7.3 **Rules of Differentiation Involving Functions of Different Variables** 161
Chain Rule 161
Inverse-Function Rule 163
Exercise 7.3 165
- 7.4 **Partial Differentiation** 165
Partial Derivatives 165
Techniques of Partial Differentiation 166
Geometric Interpretation of Partial Derivatives 167
Gradient Vector 168
Exercise 7.4 169
- 7.5 **Applications to Comparative-Static Analysis** 170
Market Model 170
National-Income Model 172
Input-Output Model 173
Exercise 7.5 175
- 7.6 **Note on Jacobian Determinants** 175
Exercise 7.6 177

Chapter 8

Comparative-Static Analysis of General-Function Models 178

- 8.1 **Differentials** 179
Differentials and Derivatives 179
Differentials and Point Elasticity 181
Exercise 8.1 184
- 8.2 **Total Differentials** 184
Exercise 8.2 186
- 8.3 **Rules of Differentials** 187
Exercise 8.3 189
- 8.4 **Total Derivatives** 189
Finding the Total Derivative 189
A Variation on the Theme 191
Another Variation on the Theme 192
Some General Remarks 193
Exercise 8.4 193
- 8.5 **Derivatives of Implicit Functions** 194
Implicit Functions 194
Derivatives of Implicit Functions 196
Extension to the Simultaneous-Equation Case 199
Exercise 8.5 204

8.6 Comparative Statics of General-Function Models 205

- Market Model* 205
- Simultaneous-Equation Approach* 207
- Use of Total Derivatives* 209
- National-Income Model (IS-LM)* 210
- Extending the Model: An Open Economy* 213
- Summary of the Procedure* 216
- Exercise 8.6* 217

8.7 Limitations of Comparative Statics 218**PART FOUR****OPTIMIZATION PROBLEMS 219****Chapter 9****Optimization: A Special Variety of Equilibrium Analysis 220****9.1 Optimum Values and Extreme Values 221****9.2 Relative Maximum and Minimum:**

- First-Derivative Test* 222
- Relative versus Absolute Extremum* 222
- First-Derivative Test* 223
- Exercise 9.2* 226

9.3 Second and Higher Derivatives 227

- Derivative of a Derivative* 227
- Interpretation of the Second Derivative* 229
- An Application* 231
- Attitudes toward Risk* 231
- Exercise 9.3* 233

9.4 Second-Derivative Test 233

- Necessary versus Sufficient Conditions* 234
- Conditions for Profit Maximization* 235
- Coefficients of a Cubic Total-Cost Function* 238
- Upward-Sloping Marginal-Revenue Curve* 240
- Exercise 9.4* 241

9.5 Maclaurin and Taylor Series 242

- Maclaurin Series of a Polynomial Function* 242
- Taylor Series of a Polynomial Function* 244
- Expansion of an Arbitrary Function* 245
- Lagrange Form of the Remainder* 248
- Exercise 9.5* 250

9.6 Nth-Derivative Test for Relative Extremum of a Function of One Variable 250

- Taylor Expansion and Relative Extremum* 250
- Some Specific Cases* 251
- Nth-Derivative Test* 253
- Exercise 9.6* 254

Chapter 10**Exponential and Logarithmic Functions 255****10.1 The Nature of Exponential Functions 256**

- Simple Exponential Function* 256
- Graphical Form* 256
- Generalized Exponential Function* 257
- A Preferred Base* 259
- Exercise 10.1* 260

10.2 Natural Exponential Functions and the Problem of Growth 260

- The Number e* 260
- An Economic Interpretation of e* 262
- Interest Compounding and the Function Ae^{rt}* 262
- Instantaneous Rate of Growth* 263
- Continuous versus Discrete Growth* 265
- Discounting and Negative Growth* 266
- Exercise 10.2* 267

10.3 Logarithms 267

- The Meaning of Logarithm* 267
- Common Log and Natural Log* 268
- Rules of Logarithms* 269
- An Application* 271
- Exercise 10.3* 272

10.4 Logarithmic Functions 272

- Log Functions and Exponential Functions* 272
- The Graphical Form* 273
- Base Conversion* 274
- Exercise 10.4* 276

10.5 Derivatives of Exponential and Logarithmic Functions 277

- Log-Function Rule* 277
- Exponential-Function Rule* 278
- The Rules Generalized* 278
- The Case of Base b* 280
- Higher Derivatives* 280
- An Application* 281
- Exercise 10.5* 282

- 10.6 Optimal Timing** 282
A Problem of Wine Storage 282
Maximization Conditions 283
A Problem of Timber Cutting 285
Exercise 10.6 286

- 10.7 Further Applications of Exponential and Logarithmic Derivatives** 286
Finding the Rate of Growth 286
Rate of Growth of a Combination of Functions 287
Finding the Point Elasticity 288
Exercise 10.7 290

Chapter 11

The Case of More than One Choice Variable 291

- 11.1 The Differential Version of Optimization Conditions** 291
First-Order Condition 291
Second-Order Condition 292
Differential Conditions versus Derivative Conditions 293

- 11.2 Extreme Values of a Function of Two Variables** 293
First-Order Condition 294
Second-Order Partial Derivatives 295
Second-Order Total Differential 297
Second-Order Condition 298
Exercise 11.2 300

- 11.3 Quadratic Forms—An Excursion** 301
Second-Order Total Differential as a Quadratic Form 301
Positive and Negative Definiteness 302
Determinantal Test for Sign Definiteness 302
Three-Variable Quadratic Forms 305
n-Variable Quadratic Forms 307
Characteristic-Root Test for Sign Definiteness 307
Exercise 11.3 312

- 11.4 Objective Functions with More than Two Variables** 313
First-Order Condition for Extremum 313
Second-Order Condition 313
n-Variable Case 316
Exercise 11.4 317

- 11.5 Second-Order Conditions in Relation to Concavity and Convexity** 318
Checking Concavity and Convexity 320
Differentiable Functions 324
Convex Functions versus Convex Sets 327
Exercise 11.5 330

- 11.6 Economic Applications** 331
Problem of a Multiproduct Firm 331
Price Discrimination 333
Input Decisions of a Firm 336
Exercise 11.6 341

- 11.7 Comparative-Static Aspects of Optimization** 342
Reduced-Form Solutions 342
General-Function Models 343
Exercise 11.7 345

Chapter 12

Optimization with Equality Constraints 347

- 12.1 Effects of a Constraint** 347
12.2 Finding the Stationary Values 349
Lagrange-Multiplier Method 350
Total-Differential Approach 352
An Interpretation of the Lagrange Multiplier 353
n-Variable and Multiconstraint Cases 354
Exercise 12.2 355

- 12.3 Second-Order Conditions** 356
Second-Order Total Differential 356
Second-Order Conditions 357
The Bordered Hessian 358
n-Variable Case 361
Multiconstraint Case 362
Exercise 12.3 363

- 12.4 Quasiconcavity and Quasiconvexity** 364
Geometric Characterization 364
Algebraic Definition 365
Differentiable Functions 368
A Further Look at the Bordered Hessian
Absolute versus Relative Extrema 372
Exercise 12.4 374

- 12.5 Utility Maximization and Consumer Demand** 374
First-Order Condition 375
Second-Order Condition 376

<i>Comparative-Static Analysis</i>	378
<i>Proportionate Changes in Prices and Income</i>	381
<i>Exercise 12.5</i>	382
12.6 Homogeneous Functions	383
<i>Linear Homogeneity</i>	383
<i>Cobb-Douglas Production Function</i>	386
<i>Extensions of the Results</i>	388
<i>Exercise 12.6</i>	389
12.7 Least-Cost Combination of Inputs	390
<i>First-Order Condition</i>	390
<i>Second-Order Condition</i>	392
<i>The Expansion Path</i>	392
<i>Homothetic Functions</i>	394
<i>Elasticity of Substitution</i>	396
<i>CES Production Function</i>	397
<i>Cobb-Douglas Function as a Special Case of the CES Function</i>	399
<i>Exercise 12.7</i>	401

Chapter 13

Further Topics in Optimization 402

13.1 Nonlinear Programming and Kuhn-Tucker Conditions	402
<i>Step 1: Effect of Nonnegativity Restrictions</i>	403
<i>Step 2: Effect of Inequality Constraints</i>	404
<i>Interpretation of the Kuhn-Tucker Conditions</i>	408
<i>The n-Variable, m-Constraint Case</i>	409
<i>Exercise 13.1</i>	411
13.2 The Constraint Qualification	412
<i>Irregularities at Boundary Points</i>	412
<i>The Constraint Qualification</i>	415
<i>Linear Constraints</i>	416
<i>Exercise 13.2</i>	418
13.3 Economic Applications	418
<i>War-Time Rationing</i>	418
<i>Peak-Load Pricing</i>	420
<i>Exercise 13.3</i>	423
13.4 Sufficiency Theorems in Nonlinear Programming	424
<i>The Kuhn-Tucker Sufficiency Theorem: Concave Programming</i>	424

<i>The Arrow-Enthoven Sufficiency Theorem: Quasiconcave Programming</i>	425
<i>A Constraint-Qualification Test</i>	426
<i>Exercise 13.4</i>	427

13.5 Maximum-Value Functions and the Envelope Theorem 428

<i>The Envelope Theorem for Unconstrained Optimization</i>	428
<i>The Profit Function</i>	429
<i>Reciprocity Conditions</i>	430
<i>The Envelope Theorem for Constrained Optimization</i>	432
<i>Interpretation of the Lagrange Multiplier</i>	434
13.6 Duality and the Envelope Theorem	435
<i>The Primal Problem</i>	435
<i>The Dual Problem</i>	436
<i>Duality</i>	436
<i>Roy's Identity</i>	437
<i>Shephard's Lemma</i>	438
<i>Exercise 13.6</i>	441
13.7 Some Concluding Remarks	442

PART FIVE

DYNAMIC ANALYSIS 443

Chapter 14

Economic Dynamics and Integral Calculus 444

14.1 Dynamics and Integration	444
14.2 Indefinite Integrals	446
<i>The Nature of Integrals</i>	446
<i>Basic Rules of Integration</i>	447
<i>Rules of Operation</i>	448
<i>Rules Involving Substitution</i>	451
<i>Exercise 14.2</i>	453
14.3 Definite Integrals	454
<i>Meaning of Definite Integrals</i>	454
<i>A Definite Integral as an Area under a Curve</i>	455
<i>Some Properties of Definite Integrals</i>	458
<i>Another Look at the Indefinite Integral</i>	460
<i>Exercise 14.3</i>	460

- 14.4 Improper Integrals 461**
 Infinite Limits of Integration 461
 Infinite Integrand 463
 Exercise 14.4 464

- 14.5 Some Economic Applications of Integrals 464**
 From a Marginal Function to a Total Function 464
 Investment and Capital Formation 465
 Present Value of a Cash Flow 468
 Present Value of a Perpetual Flow 470
 Exercise 14.5 470

- 14.6 Domar Growth Model 471**
 The Framework 471
 Finding the Solution 472
 The Razor's Edge 473
 Exercise 14.6 474

Chapter 15

Continuous Time: First-Order Differential Equations 475

- 15.1 First-Order Linear Differential Equations with Constant Coefficient and Constant Term 475**
 The Homogeneous Case 476
 The Nonhomogeneous Case 476
 Verification of the Solution 478
 Exercise 15.1 479
- 15.2 Dynamics of Market Price 479**
 The Framework 480
 The Time Path 480
 The Dynamic Stability of Equilibrium 481
 An Alternative Use of the Model 482
 Exercise 15.2 483
- 15.3 Variable Coefficient and Variable Term 483**
 The Homogeneous Case 484
 The Nonhomogeneous Case 485
 Exercise 15.3 486
- 15.4 Exact Differential Equations 486**
 Exact Differential Equations 486
 Method of Solution 487
 Integrating Factor 489
 Solution of First-Order Linear Differential Equations 490
 Exercise 15.4 491

- 15.5 Nonlinear Differential Equations of the First Order and First Degree 492**
 Exact Differential Equations 492
 Separable Variables 492
 Equations Reducible to the Linear Form 493
 Exercise 15.5 495

- 15.6 The Qualitative-Graphic Approach 495**
 The Phase Diagram 495
 Types of Time Path 496
 Exercise 15.6 498

- 15.7 Solow Growth Model 498**
 The Framework 498
 A Qualitative-Graphic Analysis 500
 A Quantitative Illustration 501
 Exercise 15.7 502

Chapter 16

Higher-Order Differential Equations 503

- 16.1 Second-Order Linear Differential Equations with Constant Coefficients and Constant Term 504**
 The Particular Integral 504
 The Complementary Function 505
 The Dynamic Stability of Equilibrium 510
 Exercise 16.1 511
- 16.2 Complex Numbers and Circular Functions 511**
 Imaginary and Complex Numbers 511
 Complex Roots 512
 Circular Functions 513
 Properties of the Sine and Cosine Functions 515
 Euler Relations 517
 Alternative Representations of Complex Numbers 519
 Exercise 16.2 521
- 16.3 Analysis of the Complex-Root Case 522**
 The Complementary Function 522
 An Example of Solution 524
 The Time Path 525
 The Dynamic Stability of Equilibrium 527
 Exercise 16.3 527

16.4 A Market Model with Price

Expectations 527

Price Trend and Price Expectations 527

A Simplified Model 528

The Time Path of Price 529

Exercise 16.4 532

16.5 The Interaction of Inflation and

Unemployment 532

The Phillips Relation 532

*The Expectations-Augmented Phillips
Relation* 533

*The Feedback from Inflation to
Unemployment* 534

The Time Path of π 534

Exercise 16.5 537

16.6 Differential Equations with a Variable

Term 538

Method of Undetermined Coefficients 538

A Modification 539

Exercise 16.6 540

16.7 Higher-Order Linear Differential

Equations 540

Finding the Solution 540

Convergence and the Routh Theorem 542

Exercise 16.7 543

Chapter 17

Discrete Time: First-Order Difference Equations 544

17.1 Discrete Time, Differences, and Difference Equations 544

17.2 Solving a First-Order Difference

Equation 546

Iterative Method 546

General Method 548

Exercise 17.2 551

17.3 The Dynamic Stability of Equilibrium 551

The Significance of b 551

The Role of A 553

Convergence to Equilibrium 554

Exercise 17.3 554

17.4 The Cobweb Model 555

The Model 555

The Cobwebs 556

Exercise 17.4 558

17.5 A Market Model with Inventory 559

The Model 559

The Time Path 560

Graphical Summary of the Results 561

Exercise 17.5 562

17.6 Nonlinear Difference Equations

The Qualitative-Graphic Approach 562

Phase Diagram 562

Types of Time Path 564

A Market with a Price Ceiling 565

Exercise 17.6 567

Chapter 18

Higher-Order Difference Equations 567

18.1 Second-Order Linear Difference Equations with Constant Coefficients and Constant Term 569

Particular Solution 569

Complementary Function 570

The Convergence of the Time Path 573

Exercise 18.1 575

18.2 Samuelson Multiplier-Acceleration Interaction Model 576

The Framework 576

The Solution 577

Convergence versus Divergence 578

A Graphical Summary 580

Exercise 18.2 581

18.3 Inflation and Unemployment in Discrete Time 581

The Model 581

The Difference Equation in p 582

The Time Path of p 583

The Analysis of U 584

The Long-Run Phillips Relation 585

Exercise 18.3 585

18.4 Generalizations to Variable-Term and Higher-Order Equations 586

Variable Term in the Form of cm^t 586

Variable Term in the Form ct^p 587

*Higher-Order Linear Difference
Equations* 588

*Convergence and the Schur
Theorem* 589

Exercise 18.4 591

Chapter 19**Simultaneous Differential Equations and Difference Equations 592****19.1 The Genesis of Dynamic Systems 592***Interacting Patterns of Change 592**The Transformation of a High-Order Dynamic Equation 593***19.2 Solving Simultaneous Dynamic Equations 594***Simultaneous Difference Equations 594**Matrix Notation 596**Simultaneous Differential Equations 599**Further Comments on the Characteristic Equation 601**Exercise 19.2 602***19.3 Dynamic Input-Output Models 603***Time Lag in Production 603**Excess Demand and Output Adjustment 605**Capital Formation 607**Exercise 19.3 608***19.4 The Inflation-Unemployment Model Once More 609***Simultaneous Differential Equations 610**Solution Paths 610**Simultaneous Difference Equations 612**Solution Paths 613**Exercise 19.4 614***19.5 Two-Variable Phase Diagrams 614***The Phase Space 615**The Demarcation Curves 615**Streamlines 617**Types of Equilibrium 618**Inflation and Monetary Rule à la Obst 620**Exercise 19.5 623***19.6 Linearization of a Nonlinear Differential-Equation System 623***Taylor Expansion and Linearization 624**The Reduced Linearization 625**Local Stability Analysis 625**Exercise 19.6 629***Chapter 20****Optimal Control Theory 631****20.1 The Nature of Optimal Control 631***Illustration: A Simple Macroeconomic Model 632**Pontryagin's Maximum Principle 633***20.2 Alternative Terminal Conditions 639***Fixed Terminal Point 639**Horizontal Terminal Line 639**Truncated Vertical Terminal Line 639**Truncated Horizontal Terminal Line 640**Exercise 20.2 643***20.3 Autonomous Problems 644****20.4 Economic Applications 645***Lifetime Utility Maximization 645**Exhaustible Resource 647**Exercise 20.4 649***20.5 Infinite Time Horizon 649***Neoclassical Optimal Growth Model 649**The Current-Value Hamiltonian 651**Constructing a Phase Diagram 652**Analyzing the Phase Diagram 653***20.6 Limitations of Dynamic Analysis 654****The Greek Alphabet 655****Mathematical Symbols 656****A Short Reading List 659****Answers to Selected Exercises 662****Index 677**
