

ECOLOGY

THEORIES AND
APPLICATIONS

PETER D. RAVEN

Contents

Preface to the First Edition

xiii

Preface to the Second Edition

xix

Section One: Introduction

1

1: Why and How to Study Ecology

4

1.1 ECOLOGY AND DIVERSITY

7

1.2 SCIENTIFIC METHODS

11

Null Hypotheses

12

Ecological Questions

13

1.3 EXPERIMENTS

15

1.4 THE EFFECTS OF SCALE

17

Section Two: Evolutionary and Behavioral Ecology

21

2: The Diversity of Life

25

2.1 HISTORICAL BACKGROUND

25

Lamarck

25

Darwin

28

Wallace	30
Mendel	32
2.2 HOW VARIATION ORIGINATES	33
Point Mutations	34
Chromosomal Mutations	35
2.3 HOW VARIATION IS MAINTAINED	37
How Variation Is Maintained Without Selection	37
The Hardy-Weinberg Theorem	37
The Effects of Nonrandom Mating	38
Environmental Variance	38
How Variation Is Maintained with Selection	39
2.4 HOW MUCH VARIATION EXISTS IN NATURE?	40
Restriction Fragment Polymorphisms (RFPLs)	43
DNA Sequencing and PCR	43
2.5 REDUCTION IN VARIATION	47
Inbreeding	47
Genetic Drift	52
Neighborhoods	54
Bottlenecks	55
3: Natural Selection and Speciation	57
3.1 NATURAL SELECTION	57
Industrial Melanism: The Case of the Peppered Moth	58
Balanced Polymorphism	61
3.2 SPECIATION	62
Allopatric Speciation	66
Sympatric Speciation	67
3.3 RATES OF FORMATION OF NEW SPECIES AND EXTINCTION	68
OF OLD ONES	73
3.4 CAUSES OF RECENT EXTINCTIONS	73
Species Life Histories and Correlates with Extinction	74
The Causes of Extinction	78
Threatened Species	79
Threats to Species	81
The Taxonomic Distribution of Threatened Species	81
4: Group Selection and Individual Selection	85
4.1 DRAWBACKS TO THEORIES OF GROUP SELECTION	86
4.2 ALTRUISM	88
Altruism Between Relatives	89
Altruism Between Unrelated Individuals	90
Castes	92
Sex	95
4.3 LIVING IN GROUPS	97
Increased Vigilance	98

Dilution Effect	98
Group Predation	99

Section Three: Population Ecology 103

5: Physiological Ecology	105
5.1 CLIMATE	108
5.2 TEMPERATURE	114
<i>Global Warming</i>	116
5.3 MOISTURE	119
5.4 WIND	120
5.5 SOIL	122
5.6 FIRE	122
5.7 ENVIRONMENT AND ABUNDANCE	124
5.8 ENVIRONMENT AND COMMUNITIES	126
5.9 ENVIRONMENT AND EVOLUTION	126

6: Population Growth	129
6.1 LIFE TABLES	130
6.2 DETERMINISTIC MODELS	137
<i>Geometric Growth</i>	137
<i>Logistic Growth</i>	139
<i>Time Lags</i>	142
6.3 STOCHASTIC MODELS	143

7: Mutualism and Commensalism	151
7.1 MUTUALISM	152
7.2 POLLINATION	153
7.3 DISPERSAL SYSTEMS	154
7.4 OTHER EXAMPLES OF MUTUALISM	154
<i>Protection</i>	155
<i>Obligatory Mutualism</i>	156
7.5 COMMENSALISM	156

8: Competition and Coexistence	158
8.1 MATHEMATICAL MODELS	158
8.2 LABORATORY STUDIES OF COMPETITION	163
8.3 COMPETITION IN NATURE	165
8.4 COEXISTENCE	175
<i>Theories Based on Morphology</i>	176
<i>r and K Selection</i>	180

9: Predation	183
9.1 STRATEGIES TO AVOID BEING EATEN: EVIDENCE FOR THE STRENGTH OF PREDATION AS A SELECTIVE FORCE	184
9.2 MATHEMATICAL MODELS	187
9.3 EVIDENCE FROM EXPERIMENTS AND INTRODUCTIONS	193
9.4 REVIEWS AND NATURAL SYSTEMS	197
10: Herbivory	199
10.1 PLANT DEFENSES	199
Types of Defensive Reactions	200
Induced Defenses	202
10.2 MATHEMATICAL MODELS	203
10.3 THE FIELD FREQUENCY OF HERBIVORY	208
Beneficial Herbivory?	214
10.4 THE EFFECTS OF PLANTS ON HERBIVORES	216
11: Parasitism	218
11.1 DEFENSES AGAINST PARASITES	219
11.2 THE SPREAD OF DISEASE	220
11.3 MODELS OF HOST-PARASITOID INTERACTIONS	222
11.4 THE EFFECTS OF PARASITES ON HOST POPULATIONS	225
11.5 PARASITES AND BIOLOGICAL CONTROL	227
12: The Causes of Population Change	230
Metapopulations	232
12.1 KEY-FACTOR ANALYSIS	235
12.2 DENSITY DEPENDENCE	240
Density Vagueness	241
Spatial Phenomena	243
12.3 CONCEPTUAL MODELS	245
Top-down and Bottom-up Effects	246
12.4 INDIRECT EFFECTS	248
Detecting Indirect Effects	249
Indirect Effects Compared to Direct Effects	

Section Four: Community Ecology	251
13: The Main Types of Communities	254
13.1 TROPICAL FOREST	258
13.2 TEMPERATE FOREST	260
13.3 DESERTS	260

13.4	GRASSLAND	264
13.5	TAIGA	265
13.6	TUNDRA	266
13.7	MOUNTAIN COMMUNITIES	267
13.8	MARINE COMMUNITIES	267
13.9	FRESHWATER COMMUNITIES	270
14:	Species Diversity and Community Stability	274
14.1	RAREFACTION	274
14.2	DIVERSITY INDICES	278
	<i>Dominance Indices</i>	279
	<i>Information Statistic Indices</i>	279
	<i>Shannon Index</i>	280
	<i>Brillouin Index</i>	281
	<i>Beyond Standard Diversity Indices: Ordinal Indices</i>	283
14.3	RANK ABUNDANCE DIAGRAMS	287
14.4	DIVERSITY GRADIENTS	287
	<i>Biotic Explanations</i>	292
	<i>Abiotic Explanations</i>	295
14.5	STABILITY	296
	<i>Evidence for Stability</i>	297
	<i>Multiple Stable States</i>	298
	<i>Diversity and Stability</i>	
15:	Community Change	302
15.1	SUCCESION	302
15.2	ISLAND BIOGEOGRAPHY	311
	<i>Evidence in Support of the Theory of Island Biogeography</i>	314
Section Five:	Ecosystems Ecology	323
16:	Trophic Structure	325
16.1	TROPHIC LEVELS	325
16.2	FOOD WEBS	328
	<i>Problems with Food-web Theory</i>	331
16.3	GUILDS	333
17:	Energy and Nutrient Flow	337
17.1	PRIMARY PRODUCTION	339
	<i>Efficiency Measures of Primary Production</i>	342
	<i>The Limits to Primary Production</i>	343
	<i>Aquatic Systems</i>	345

17.2	SECONDARY PRODUCTION	
	Efficiency Measures of Secondary Production	346
	The Limits to Secondary Production	347
17.3	NUTRIENT CYCLES	349
	The Phosphorus Cycle	351
	The Carbon Cycle	352
	The Nitrogen Cycle	354
		356

Section Six: Applied Ecology 362

✓18:	Human Population Growth and the Direct Exploitation of Wildlife	366
18.1	HUMAN POPULATION GROWTH	366
18.2	DIRECT EXPLOITATION	372
	The Optimal Yield Problem	374

19:	Patterns of Resource Use	383
19.1	WILDERNESS AREAS	383
19.2	PROTECTED ECOSYSTEMS: NATIONAL PARKS	384
	The Theory of Reserve Design	387
	The Practice of Preserving the Environment	391
19.3	FORESTS	394
19.4	AGRICULTURAL LAND	397
	The Ecological Consequences of Agriculture	399
19.5	DERELICT LAND	401
19.6	RESTORATION ECOLOGY	402
	The Sources and Uses of Damaged Land	404
	The Techniques of Restoration	405
	Restoring Animals to Ecosystems	406

20:	Waste and Pollution	410
20.1	AIR POLLUTANTS	410
	Carbon Dioxide	410
	Sulfur Dioxide	414
	Chlorofluorocarbons	415
20.2	PESTICIDES	416
20.3	WATER POLLUTION	419
	Oil	419
	Eutrophication	421
20.4	RADIOACTIVE WASTES	423
	Nuclear Accidents	425

21: Exotic Species	428
21.1 HOW INTRODUCTIONS OCCUR	428
<i>Deliberate Introductions</i>	428
<i>Accidental Introductions</i>	430
21.2 THE EFFECTS OF INTRODUCTIONS	433
<i>Effects of Herbivores</i>	434
<i>Effects of Predators</i>	434
<i>Effects of Competitors</i>	436
<i>Other Effects of Introduced Species</i>	437
21.3 WHAT MAKES A SUCCESSFUL INVADER?	438
<i>What Areas Are Most Easily Invaded?</i>	439
21.4 COMBATING THE SPREAD OF EXOTICS	439
 Section 7: Epilogue	 443
 Glossary	 450
 Literature Cited	 464
 Credits	 515
 Index	 517
