

SCHAUM'S OUTLINE SERIES
THEORY AND PROBLEMS OF

GENETICS

2/ed

WILLIAM D. STANSFIELD

INCLUDING 440 SOLVED PROBLEMS

SCHAUM'S OUTLINE SERIES IN SCIENCE

McGraw-Hill Book Company

CONTENTS

Chapter 1	THE PHYSICAL BASIS OF HEREDITY 1 Genetics. Cells. Chromosomes. Cell division. Mendel's laws. Gametogenesis. Life cycles.
Chapter 2	SINGLE GENE INHERITANCE 19 Terminology. Allelic relationships. Single gene (monofactorial) crosses. Pedigree analysis. Probability theory.
Chapter 3	TWO OR MORE GENES 40 Independent assortment. Systems for solving dihybrid crosses. Modified dihybrid ratios. Higher combinations.
Chapter 4	GENETIC INTERACTION 52 Two factor interactions. Epistatic interactions. Non-epistatic interactions. Interactions with three or more factors. Pleiotropism.
Chapter 5	THE GENETICS OF SEX 69 The importance of sex. Sex determining mechanisms. Sex-linked inheritance. Variations of sex-linkage. Sex-influenced traits. Sex-limited traits. Sex reversal. Sexual phenomena in plants.
Chapter 6	LINKAGE AND CHROMOSOME MAPPING 96 Recombination among linked genes. Genetic mapping. Linkage estimates from F_2 data. Use of genetic maps. Crossover suppression. Tetrad analysis in ascomycetes. Recombination mapping with tetrads. Mapping the human genome.
Chapter 7	STATISTICAL DISTRIBUTIONS 140 The binomial expansion. The Poisson distribution. Testing genetic ratios.
Chapter 8	COMPOUND GENETIC ANALYSES 156
Chapter 9	CYTOGENETICS 170 The union of cytology with genetics. Variation in chromosome numbers. Variation in chromosome size. Variation in the arrangement of chromosome segments. Variation in the number of chromosomal segments. Variation in chromosome morphology. Human cytogenetics.

CONTENTS

Chapter 10	CYTOPLASMIC FACTORS	198
	Maternal effects. Plasmagenes. Specific induction of phenotypic change. Sym- bionts.	
Chapter 11	QUANTITATIVE GENETICS AND BREEDING PRINCIPLES	213
	Qualitative vs. quantitative traits. Quasi-quantitative traits. The normal distribution. Types of gene action. Heritability. Selection methods. Mating methods.	
Chapter 12	POPULATION GENETICS	248
	Hardy-Weinberg equilibrium. Calculating gene frequencies. Testing a locus for equilibrium.	
Chapter 13	PRINCIPLES OF EVOLUTION	266
	Migration. Mutation. Selection. Genetic drift. Joint pressures.	
Chapter 14	THE CHEMICAL BASIS OF HEREDITY	288
	Nucleic acids. Central dogma. Genetic code. Protein synthesis. Protein structure. Nucleic acid enzymology. Mutations. Defining the gene. Regulation of gene activity.	
Chapter 15	GENETICS OF BACTERIA AND VIRUSES	327
	Bacteria. Mapping the bacterial chromosome. Viruses.	
Chapter 16	MOLECULAR GENETICS	358
	History. Genetic engineering. Nucleotide sequencing.	
	INDEX	375
