
Table of Contents

Preface	ix
1. Query Response Time	1
A True Story of False Performance	2
North Star	3
Query Reporting	4
Sources	4
Aggregation	6
Reporting	8
Query Analysis	11
Query Metrics	11
Metadata and the Application	24
Relative Values	24
Average, Percentile, and Maximum	25
Improving Query Response Time	27
Direct Query Optimization	27
Indirect Query Optimization	28
When to Optimize Queries	29
Performance Affects Customers	29
Before and After Code Changes	29
Once a Month	30
MySQL: Go Faster	30
Summary	32
Practice: Identify Slow Queries	33

2. Indexes and Indexing.....	35
Red Herrings of Performance	37
Better, Faster Hardware!	37
MySQL Tuning	39
MySQL Indexes: A Visual Introduction	40
InnoDB Tables Are Indexes	41
Table Access Methods	45
Leftmost Prefix Requirement	49
EXPLAIN: Query Execution Plan	51
WHERE	54
GROUP BY	60
ORDER BY	65
Covering Indexes	71
Join Tables	71
Indexing: How to Think Like MySQL	80
Know the Query	80
Understand with EXPLAIN	81
Optimize the Query	82
Deploy and Verify	83
It Was a Good Index Until...	84
Queries Changed	84
Excessive, Duplicate, and Unused	85
Extreme Selectivity	86
It's a Trap! (When MySQL Chooses Another Index)	87
Table Join Algorithms	87
Summary	89
Practice: Find Duplicate Indexes	90
3. Data.....	91
Three Secrets	92
Indexes May Not Help	92
Less Data Is Better	96
Less QPS Is Better	96
Principle of Least Data	97
Data Access	97
Data Storage	104
Delete or Archive Data	115
Tools	115
Batch Size	115
Row Lock Contention	118

Space and Time	118
The Binary Log Paradox	119
Summary	120
Practice: Audit Query Data Access	121
4. Access Patterns.....	123
MySQL Does Nothing	124
Performance Destabilizes at the Limit	125
Toyota and Ferrari	130
Data Access Patterns	131
Read/Write	133
Throughput	133
Data Age	134
Data Model	136
Transaction Isolation	136
Read Consistency	137
Concurrency	138
Row Access	139
Result Set	139
Application Changes	140
Audit the Code	140
Offload Reads	141
Enqueue Writes	145
Partition Data	146
Don't Use MySQL	147
Better, Faster Hardware?	148
Summary	150
Practice: Describe an Access Pattern	150
5. Sharding.....	151
Why a Single Database Does Not Scale	152
Application Workload	152
Benchmarks Are Synthetic	155
Writes	156
Schema Changes	157
Operations	158
Pebbles, Not Boulders	159
Sharding: A Brief Introduction	160
Shard Key	161
Strategies	162
Challenges	167

Alternatives	170
NewSQL	170
Middleware	171
Microservices	172
Don't Use MySQL	172
Summary	173
Practice: Four-Year Fit	173
6. Server Metrics.....	175
Query Performance Versus Server Performance	177
Normal and Stable: The Best Database Is a Boring Database	180
Key Performance Indicators	181
Field of Metrics	182
Response Time	182
Rate	183
Utilization	183
Wait	184
Error	185
Access Pattern	186
Internal	186
Spectra	187
Query Response Time	188
Errors	190
Queries	191
Threads and Connections	196
Temporary Objects	199
Prepared Statements	200
Bad SELECT	201
Network Throughput	202
Replication	203
Data Size	203
InnoDB	205
Monitoring and Alerting	223
Resolution	223
Wild Goose Chase (Thresholds)	225
Alert on User Experience and Objective Limits	226
Cause and Effect	228
Summary	230
Practice: Review Key Performance Indicators	231
Practice: Review Alerts and Thresholds	232

7. Replication Lag.....	233
Foundation	234
Source to Replica	235
Binary Log Events	237
Replication Lag	238
Causes	240
Transaction Throughput	240
Post-Failure Rebuild	241
Network Issues	241
Risk: Data Loss	241
Asynchronous Replication	242
Semisynchronous Replication	244
Reducing Lag: Multithreaded Replication	246
Monitoring	250
Recovery Time	252
Summary	254
Practice: Monitor Subsecond Lag	255
8. Transactions.....	259
Row Locking	260
Record and Next-Key Locks	262
Gap Locks	266
Secondary Indexes	269
Insert Intention Locks	273
MVCC and the Undo Logs	276
History List Length	280
Common Problems	282
Large Transactions (Transaction Size)	282
Long-Running Transactions	283
Stalled Transactions	284
Abandoned Transactions	285
Reporting	286
Active Transactions: Latest	286
Active Transactions: Summary	290
Active Transaction: History	291
Committed Transactions: Summary	292
Summary	294
Practice: Alert on History List Length	295
Practice: Examine Row Locks	296

9. Other Challenges.....	297
Split-Brain Is the Greatest Risk	297
Data Drift Is Real but Invisible	299
Don't Trust ORM	299
Schemas Always Change	300
MySQL Extends Standard SQL	301
Noisy Neighbors	301
Applications Do Not Fail Gracefully	302
High Performance MySQL Is Difficult	303
Practice: Identify the Guardrails that Prevent Split-Brain	303
Practice: Check for Data Drift	305
Practice: Chaos	306
10. MySQL in the Cloud.....	307
Compatibility	308
Management (DBA)	310
Network and Storage...Latency	312
Performance Is Money	313
Summary	315
Practice: Try MySQL in the Cloud	315
Index.....	317
