## **CONTENTS**

INTRODUCTION CELLS OBEY THE LAWS OF PHYSICS AND CHARLES	
CELLS OBEY THE LAWS OF PHYSICS AND CHEMISTRY	3
HEREDITY WORKS THROUGH MACROMOLECULES	3
PROTEINS CONSIST OF CHAINS OF AMINO ACIDS	4
NONCOVALENT FORCES ARE IMPORTANT IN PROTEIN CONFORMATION PROTEIN STRUCTURES ARE EXTREMELY DIVERSE	7
HOW DO PROTEINS FOLD INTO THE CORRECT CONFORMATION?	9 11
THE SOURCE CONFORMATION?	*1
PART 1	
DNA AS A STORE OF INFORMATION	15
CHAPTER 1	
GENES ARE MUTABLE UNITS	17
DISCOVERY OF THE GENE	18
THE ROLE OF CHROMOSOMES IN HEREDITY	22
EACH GENE LIES ON A SPECIFIC CHROMOSOME	26
GENES LIE IN A LINEAR ARRAY	27
THE GENETIC MAP IS CONTINUOUS	30
ONE GENE—ONE PROTEIN A DETAILED DEFINITION: THE CISTRON	31 33
MAPPING MUTATIONS AT THE MOLECULAR LEVEL	35
WATTING WOTATIONS AT THE WOLLOOLAN LEVEL	155
CHAPTER 2	
DNA IS THE GENETIC MATERIAL	37
THE DISCOVERY OF DNA	37
DNA IS THE (ALMOST) UNIVERSAL GENETIC MATERIAL	39
THE COMPONENTS OF DNA	41

DNA IS A DOUBLE HELIX	44
DNA REPLICATION IS SEMICONSERVATIVE	49 49
THE GENETIC CODE IS READ IN TRIPLETS	52
POINT MUTATIONS CHANGE SINGLE BASE PAIRS	53
MUTATIONS ARE CONCENTRATED AT HOTSPOTS	55
THE RATE OF MUTATION	
CHAPTER 3 THE TOPOLOGY OF NUCLEIC ACIDS	57
THE TOPOLOGY OF RESIDENCE	57
DNA CAN BE DENATURED AND RENATURED	58
NUCLEIC ACIDS HYBRIDIZE BY BASE PAIRING NUCLEIC ACIDS HYBRIDIZE BY BASE PAIRING SINGLE STRANDED NUCLEIC ACIDS MAY HAVE SECONDARY STRUCTURE	60 63
	65
DUPLEX DNA HAS ALTERNATIVE DOUBLE-HELICAL STRUCTURES	66
A LEET HANDED FORM OF DNA	68
CLOSED DNA CAN BE SUPERCOILED	70
CLOSED DNA CAN BE SUPERCUILED SUPERCOILING INFLUENCES THE STRUCTURE OF THE DOUBLE HELIX	
CHAPTER 4	72
THE GENE	73
THE DAY INTO SPECIFIC PRACTICITY	75
RESTRICTION ENZYMES CLEAVE DIVATIVO STEED AS GENETIC MARKERS	78
	83 86
OBTAINING THE SEQUENCE OF DNA OBTAINING THE SEQUENCE OF DNA OBTAINING THE SEQUENCE OF DNA	87
PROKARYOTIC GENES AND PROTEIN	89
ELIKARYOTIC GENES CAN BE THAN ONE PROTEIN	90
SOME DNA SEQUENCES CODE FOR MORE THAT ON OR RNA GENETIC INFORMATION CAN BE PROVIDED BY DNA OR RNA THE SCOPE OF THE PARADIGM	93
PART 2 PROTEINS	M.40 95
PART 2 TURNING GENES INTO PROTEINS	
	97
CHAPTER 5 THE ASSEMBLY LINE FOR PROTEIN SYNTHESIS	98
TOWESTS SHA IS THE ADAPTOR	99
TRANSFER RNA IS THE ADAPTOR MESSENGER RNA IS TRANSLATED BY RIBOSOMES	103
THE MEANING OF THE GENETIC CODE	105 106
THE RIBOSOMAL SITES OF ACTION INITIATION NEEDS 30S SUBUNITS AND ACCESSORY FACTORS	109
A SPECIAL INITIATOR IRNA STARTS THE POLYPEPTIDE CHAIN	112
EUKARYOTIC INITIATION INVOLVES MANY FACTORS	114
ELONGATION FACTOR T PRINCE ANNIOACYL IRNA INTO THE A SITE	116
TRANSLOCATION MOVES THE RIBOSOME FINISHING OFF: THREE CODONS TERMINATE PROTEIN SYNTHESIS	120
CHAPTER 6	and agreement organization of the con-

WILLIAM AND DIDIPECTIONAL ELEMENTS THAT ASSIST INCLUDED	213 216
CHAPTER 10 A PANOPLY OF OPERONS:	
THE LACTOSE PARADIGM AND OTHERS	219
NOUCTION AND REPRESSION ARE CONTROLLED BY SMALL MOLECULES	220 220
STRUCTURAL GENE CLUSTERS ARE COORDINATELY CONTROLLED	223
REPRESSOR PROTEIN BINDS TO THE OPERATOR	225
THE OPERATOR IS CIS-ACTING HOW DOES REPRESSOR BLOCK TRANSCRIPTION?	227
CONTACTS IN THE OPERATOR	228
REPRESSOR IS A MULTIMERIC DNA-BINDING PROTEIN	229 231
GETTING OFF DNA AND STORING SURPLUS REPRESSOR	234
A PARADOX OF INDUCTION	234
REPRESSION CAN OCCUR AT MULTIPLE LOCI DISTINGUISHING POSITIVE AND NEGATIVE CONTROL	235
CATABOLITE REPRESSION INVOLVES POSITIVE REGULATION AT THE PROMOTER	236
HARD TIMES PROVOKE THE STRINGENT RESPONSE	240
TRANSLATION MAY BE AUTOGENOUSLY CONTROLLED	242
SMALL RNA MOLECULES CAN REGULATE TRANSLATION	244
CHAPTER 11	
CONTROL AT TERMINATION:	
ATTENUATION AND ANTITERMINATION	248
TWO TERMINATION MODES IN E. COLI INVOLVE PALINDROMES	249
EUKARYOTIC TERMINATION ALSO INVOLVES SECONDARY STRUCTURE OR U-RUNS	
ALTERNATIVE SECONDARY STRUCTURES CONTROL ATTENUATION	252
THE GENERALITY OF ATTENUATION	256
HOW DOES E. COLI RHO FACTOR WORK?  ANTITERMINATION DEPENDS ON SPECIFIC SITES	259 261
MORE SUBUNITS FOR RNA POLYMERASE?	267
CHAPTER 12	
LYTIC CASCADES AND LYSOGENIC REPRESSION	269
LYTIC DEVELOPMENT IS CONTROLLED BY A CASCADE	270
FUNCTIONAL CLUSTERING IN PHAGES T7 AND T4	272
THE LAMBDA LYTIC CASCADE RELIES ON ANTITERMINATION	274
LYSOGENY IS MAINTAINED BY AN AUTOGENOUS CIRCUIT	277
REPRESSOR IS A DIMER THAT BINDS COOPERATIVELY AT EACH OPERATOR	279
HOW IS REPRESSOR SYNTHESIS ESTABLISHED?	285
ANTIREPRESSOR IS NEEDED FOR LYTIC INFECTION	287
A DELICATE BALANCE: LYSOGENY VERSUS LYSIS	289
PART 4	
PERPETUATION OF DNA	293
CHAPTER 13	
THE REPLICON: UNIT OF REPLICATION	295
SEQUENTIAL REPLICATION FORMS EYES	296
THE BACTERIAL GENOME IS A SINGLE REPLICON	29

## CONTENTS

CONNECTING REPLICATION TO THE CELL CYCLE EACH EUKARYOTIC CHROMOSOME CONTAINS MANY REPLICONS	299 300
IDOLATING THE ORIGINS OF YEAST REPUICONS	303
REPLICATION CAN PROCEED THROUGH EYES, ROLLING CIRCLES, OR DILOOPS	303
PLASMID INCOMPATIBILITY IS CONNECTED WITH COPY NUMBER	307
CHAPTER 14	
THE APPARATUS FOR DNA REPLICATION	312
DNA POLYMERASES. THE ENZYMES THAT MAKE DNA	313
DNA SYNTHESIS IS SEMIDISCONTINUOUS	316
TANK EDACMENTS ARE PRIMED BY RNA	317
THE COMPLEXITY OF THE BACTERIAL REPLICATION APPARATUS	319 320
INITIATING SYNTHESIS OF A SINGLE DNA STRAND	322
NOVEMENT OF THE PRIMOSOME	325
INITIATING REPLICATION AT DUPLEX ORIGINS	329
THE REPLICATION APPARATUS OF PHAGE T4	331
THE PROBLEM OF LINEAR REPLICONS	•
CHAPTER 15 SYSTEMS THAT SAFEGUARD DNA	335
SYSTEMS THAT SAFEGUARD DISTALLON	336
THE OPERATION OF RESTRICTION AND MODIFICATION	338
THE ALTERNATE ACTIVITIES OF TYPE I ENZYMES	341 342
THE DUAL ACTIVITIES OF TYPE III ENZYMES	342
DEALING WITH INJURIES IN DNA	347
EXCISION-REPAIR SYSTEMS IN E. COLI RECOMBINATION-REPAIR SYSTEMS IN E. COLI	348
AN SOS SYSTEM OF MANY GENES	350
MAMMALIAN REPAIR SYSTEMS	y 11 3017 1 4 4 1
