Physical Science

(Worked examples)

A. Godman

Contents

Syllabus Coverage and the Physical Science Examination	(vi)
Preparing for the Examination	(vii)
How to Use this Book	(xi)
Chapter	Page
1 Matter, force and energy	1
Measurement — molecular theory — density — force — gravity — pressure — atmospheric pressure — motion — work — power — energy — machines	13
2 Heat	
Expansion — temperature — conduction — convection — radiation — heat capacity — latent heat — gas laws — kinetic theory	25
3 Light	
Propagation — reflection — refraction — lenses — optical instruments — colour — spectrum	40
4 Magnetism and electricity	
Magnets — magnetic fields — Earth's magnetism — cells — Ohm's law — resistors — heating effect — electromagnetism — electrical appliances — motion of a conductor — galvanometers — electric motors — induced currents — generators — inductance — alternating current	62
5 Wave motion and sound	
Pendulum — resonance — wavelength — frequency — speed — refractive index — interference — stationary waves — diffraction — sound — longitudinal waves — musical notes — vibrating strings — visible spectrum — ultra-violet and infra-red spectra	73
6 Electronics and nuclear energy	
Electric charge — electrostatic induction — spark discharge — electron beams — cathode ray tubes — X-rays — radioactivity — radiation types — decay — electromagnetic spectrum — nuclear reactions	84
7 Introductory chemistry, oxygen, hydrogen, redox	
Physical and chemical changes — air — combustion — acids and alkalis — water — solutions — crystals — hydrogen — redox reactions	95
8 Chlorine, nitrogen, sulphur, carbon and its compounds	
Chlorine — hydrogen chloride — nitrogen — ammonia — nitric acid — sulphur — sulphur dioxide — sulphuric acid — sulphur (VI) oxide — carbon — carbon dioxide — carbon monoxide — lime — hydrocarbons — alcohols — carboxylic acids — carbohydrates — proteins — fats	

9 Metals and the activity series

Metals — sodium — calcium — magnesium — aluminium — zinc — iron — steel — lead — copper — alkalis — alloys — activity series

10 Electrolysis and ionic reactions

Electrolytes — non-electrolytes — electrolysis — ionic theory — heat of reaction — ionic compounds — hydrolysis of salts — electron transfer — types of crystals

11 The mole, chemical formulae, atomic structure and bonds

Atomic structure — electrons, protons, neutrons — chemical bonds — molecular structure

12 Chemical reactions and processes, chemical industries, fuels

Ionic reactions — molecular reactions — Le Chatelier's Principle — energetics of chemical reactions — catalysts — bond energies — industrial processes — fuels

Specimen examination papers

Answers Set X (for objective-type questions on physics)

Answers Set Y (for objective-type questions on chemistry)

Answers to numerical questions
