

Instant Notes in

MOLECULAR BIOLOGY

*P.C. Turner, A.G. McLennan,
A.D. Bates & M.R.H. White*

CONTENTS

Abbreviations	ix
Preface	xi
Section A – Cells and macromolecules	1
A1 Cellular classification	1
A2 Subcellular organelles	4
A3 Macromolecules	7
A4 Large macromolecular assemblies	11
Section B – Protein structure	15
B1 Amino acids	15
B2 Protein structure and function	18
B3 Protein analysis	25
Section C – Properties of nucleic acids	31
C1 Nucleic acid structure	31
C2 Chemical and physical properties of nucleic acids	36
C3 Spectroscopic and thermal properties of nucleic acids	40
C4 DNA supercoiling	43
Section D – Prokaryotic and eukaryotic chromosome structure	47
D1 Prokaryotic chromosome structure	47
D2 Chromatin structure	49
D3 Eukaryotic chromosome structure	54
D4 Genome complexity	59
Section E – DNA replication	63
E1 DNA replication: an overview	63
E2 Bacterial DNA replication	68
E3 Eukaryotic DNA replication	72
Section F – DNA damage, repair and recombination	77
F1 Mutagenesis	77
F2 DNA damage	81
F3 DNA repair	84
F4 Recombination	87
Section G – Gene manipulation	91
G1 DNA cloning: an overview	91
G2 Preparation of plasmid DNA	96
G3 Restriction enzymes and electrophoresis	99
G4 Ligation, transformation and analysis of recombinants	104
Section H – Cloning vectors	111
H1 Design of plasmid vectors	111
H2 Bacteriophage vectors	115
H3 Cosmids and YACs	120
H4 Eukaryotic vectors	124

Section I - Gene libraries and screening	129
I1 Genomic libraries	129
I2 cDNA libraries	132
I3 Screening procedures	137
Section J - Analysis and uses of cloned DNA	141
J1 Characterization of clones	141
J2 Nucleic acid sequencing	146
J3 Polymerase chain reaction	150
J4 Organization of cloned genes	154
J5 Mutagenesis of cloned genes	158
J6 Applications of cloning	162
Section K - Transcription in prokaryotes	165
K1 Basic principles of transcription	165
K2 <i>Escherichia coli</i> RNA polymerase	168
K3 The <i>E. coli</i> σ^{70} promoter	170
K4 Transcription initiation, elongation and termination	173
Section L - Regulation of transcription in prokaryotes	179
L1 The <i>lac</i> operon	179
L2 The <i>trp</i> operon	183
L3 Transcriptional regulation by alternative σ factors	187
Section M - Transcription in eukaryotes	191
M1 The three RNA polymerases: characterization and function	191
M2 RNA Pol I genes: the ribosomal repeat	193
M3 RNA Pol III genes: 5S and tRNA transcription	197
M4 RNA Pol II genes: promoters and enhancers	201
M5 General transcription factors and RNA Pol II initiation	203
Section N - Regulation of transcription in eukaryotes	207
N1 Eukaryotic transcription factors	207
N2 Examples of transcriptional regulation	213
Section O - RNA processing and RNPs	219
O1 rRNA processing and ribosomes	219
O2 tRNA processing, RNase P and ribozymes	225
O3 mRNA processing, hnRNPs and snRNPs	228
O4 Alternative mRNA processing	234
Section P - The genetic code and tRNA	237
P1 The genetic code	237
P2 tRNA structure and function	241
Section Q - Protein synthesis	247
Q1 Aspects of protein synthesis	247
Q2 Mechanism of protein synthesis	251
Q3 Initiation in eukaryotes	257
Q4 Translational control and post-translational events	261
Section R - Bacteriophages and eukaryotic viruses^a	265
R1 Introduction to viruses	265
R2 Bacteriophages	269
R3 DNA viruses	274
R4 RNA viruses	278

Section 8 - Tumor viruses and oncogenes^b	283
S1 Oncogenes found in tumor viruses	283
S2 Categories of oncogenes	287
S3 Tumor suppressor genes	290
Further reading	295
Index	299
