

FOUNDATIONS OF GENETICS

A SCIENCE FOR SOCIETY ୧୦

ANNA C. PAI

CONTENTS

PREFACE

xi

UNIT 1 **BASIC PRINCIPLES OF INHERITANCE**

CHAPTER 1

Patterns of Inheritance	3
Genetics: The Study of Life	3
Historical Theories on the Origin of Life	4
Gregor Mendel and the Laws of Genetics	6
Dominance and Recessiveness	8
The Prediction of Offspring by Using Laws of Probabilities	16
The Rediscovery of Mendel's Laws	19
Problems	20
References	21

CHAPTER 2

The Physical Basis of Inheritance: Cell Division	22
The Cell	23
Mitosis	25
The Role of Chromosomes	28
Meiosis	30
The Physical Basis for the Law of Segregation	34
The Physical Basis for the Law of Random Assortment	36
The Completion of Gametogenesis	37
The Effect of Age on Egg Formation	39
Cell Division in the Zygote: Mitosis and Genetic Continuity	41
Problems	44
References	46

CHAPTER 3

Chromosomes and the Determination of Sex	47
The Karyotype	47
Nonrandom Assortment of Linked Genes	49
✓ Crossing-Over	50
Mapping Chromosomes by Crossing-Over Data	52
Mapping Chromosomes in Humans	55
The Sex Chromosomes	57
Sex Determination in Humans	57
Genetic Aspects of the Y Chromosome in Humans	59
X-Linked Traits	60
Sex-Influenced and Sex-Limited Traits	63
Other Systems of Sex Determination	63
Why Only Two Sexes?	64
Problems	65
References	66

CHAPTER 4

Mendelian Heredity in Humans	67
Some Mendelian Traits in Humans	67
The Pedigree Chart	70
Genetic Disadvantages of Marriage between Related Individuals	73
The Coefficients of Consanguinity and Inbreeding	74
Analysis of Pedigree Charts: X-Linked Recessiveness	80
Genetic Counseling	82
Some Limitations in the Analysis of Pedigrees	83
Problems	
References	

CHAPTER 5

Beyond Mendelian Genetics	88
Incomplete Dominance and Codominance	89
Polygenic Inheritance	91
Heritability	92
Epistasis	93
Modifiers and Expressivity	93
Lethal Genes	94
Transmission of Traits in Microorganisms	95
Problems	104
References	105

UNIT 2

THE STRUCTURE AND FUNCTION OF GENES

CHAPTER 6

What Is a Gene?	109
Proteins and Nucleic Acids in Chromosomes	110
Identification of the Genetic Substance	112
The Structure of DNA	115
The Significance of the Molecular Nature of the Gene	123
Problems	123
References	124

CHAPTER 7

What Does a Gene Do?	126
Genes and Enzymes	126
The Mechanism of Protein Synthesis	130
How Does a Cell Produce the Correct Proteins?	140
The Genetic Code	141
Some Problems of Gene Action in Complex Organisms	145
Problems	146
References	147

CHAPTER 8

The Regulation of Gene Action	149
Regulation in Bacteria: Lac Operon	150
Regulation in Bacteria: Tryptophan Operon	154
Developmental Genetics	156
Gene Regulation in Complex Organisms	164
Levels of Organization in Multicellular Organisms	169

A Mechanism of Gene	179
Recombination	181
Determinants	182

CHAPTER 9

Gene Regulation II: Immunogenetics and Cancer	184
Introduction	184
The Genetics of Immune Reactions	185
Circulating Antibodies: Blood Groups and	
Resistance to Disease	186
The Physical Nature of the Antibody Molecule	193
Genetic Determination of Antibody Molecules	195
Cell-Mediated Immune Reactions	199
The Recognition of Self	203
The Genetics of Cancer	203
Animal Viruses	204
Transformation in Animal Cells: Cancer	205
Viruses in Cancers	207
Oncogenes	209
Relationship between Animal Viruses and Oncogenes	211
Chromosomal Defects and Cancer	211
Cancer Causing Agents	213
Innate Resistance	214
Problems	218
References	218

CHAPTER 10

The Manipulation of DNA: Genetic Engineering	220
Introduction	220
Enzymes	221
Extrachromosomal Genetic Elements	229
DNA Isolation and Cloning	236
Applications of Genetic Engineering	242
Safety Concerns of Recombinant DNA Technology	250
Problems	254
References	254

UNIT 3

MUTATIONS AND GENES IN POPULATIONS

CHAPTER 11

Chromosomal, or Gross, Mutations	259
	260

Chromosomal Mutations	260
Aberrations of Chromosome Number	260
Structural Abnormalities of Chromosomes	274
Induced Mutations	280
Problems	281
References	282

CHAPTER 12

Point Mutations, Mutagens, and Repair	283
Different Kinds of Point Mutations	284
Hemoglobin Abnormalities in Humans	286
Determination of Mutation Rates	291
Mutagens	294
Radiation Mutagenesis	295
Chemical Mutagenesis	302
Repair Mechanisms	305
The Modern Dilemma	311
Problems	312
References	312

CHAPTER 13

Genes in Populations; Evolution	314
Introduction	314
Population Genetics	315
The Genetic Basis for Evolution	326
Charles Darwin and the Theory of Natural Selection	327
The Origin of Species and the Descent of Man	330
The Role of Mutations	334
Evidence for Darwin's Theory of Evolution	335
Molecular Evolution	345
Some Further Thoughts	354
Problems	355
References	356

The Proposition of Genetic Codes	911
Genetics and Medicine	989
Evolution	999
Index	1000

CHAPTER 10

Genetics and Society	989
Heritability of Intelligence	990
Epigenetics	999
Epigenetics	1000
Genetic Engineering	1000
The Future—With Imagination	1001
Problems	1001
References	1001

APPENDICES

A. Answers to Chapter Problems	413
B. Glossary	423
C. Chi Square Test	430
D. Linkage and Gene Mapping	442
E. Chemical Nature of Mutations	449
F. Tests for Toxicity	451
