

Ecology

PRINCIPLES AND APPLICATIONS

S E C O N D E D I T I O N

J L Chapman and M J Reiss

CAMBRIDGE

Contents

Preface 1

Chapter 1 Introduction

- 1.1 What is ecology? 2
- 1.2 The nature of ecology 3
- 1.3 The study of ecology 3

Chapter 2 The individual

- 2.1 Why look at individuals in ecology? 5
- 2.2 Autotrophs and heterotrophs 5
 - 2.2.1 Terms associated with heterotrophic nutrition 5
 - 2.2.2 Ingestion by heterotrophs 6
- 2.3 Metabolic rate 7
- 2.4 Factors affecting metabolic rate 19
 - 2.4.1 Size 9
 - 2.4.2 Life style 9
- 2.5 Size determines more than metabolic rate 10
- 2.6 Energy budgets 11
 - 2.6.1 Assimilation efficiency 11
 - 2.6.2 Production and respiration 11
 - 2.6.3 Allocation to reproduction 12
 - 2.6.4 Drawing up a complete energy budget 12
- 2.7 Distinguishing between growth and reproduction 13

Chapter 3 Autecology

- 3.1 The meaning of autecology 16
- 3.2 The autecology of bracken 16
 - 3.2.1 The importance of bracken 16
 - 3.2.2 The life form of bracken 17
 - 3.2.3 Anti-predator mechanisms 18
- 3.3 The autecology of the European starling 19
 - 3.3.1 Appearance and distribution 19
 - 3.3.2 Feeding habits 20
 - 3.3.3 Roosting behaviour of starlings 21
 - 3.3.4 Reproduction 22
 - 3.3.5 Starlings and humans 22

Chapter 4 Population dynamics

- 4.1 Populations and population change 23
- 4.2 Dispersal of organisms 24
- 4.3 Dormancy 24
- 4.4 The study of populations 25
 - 4.4.1 The basic equation 25
 - 4.4.2 Age structure in populations 25
 - 4.4.3 The fate of a cohort 29
 - 4.4.4 Age at death 29

- 4.4.5 Long-term population studies 29
- 4.5 Presentation of demographic data 29
 - 4.5.1 Life tables 29
 - 4.5.2 Population pyramids 30
 - 4.5.3 Survivorship curves 30
- 4.6 Evolutionary strategies 32
 - 4.6.1 Strategies as shown by survivorship curves 32
 - 4.6.2 *r*- and *K*-strategies 32
- 4.7 Modular organisms 34

Chapter 5 Population regulation

- 5.1 Population growth 37
 - 5.1.1 Population growth without regulation – exponential growth 37
 - 5.1.2 Simple population regulation – the logistic growth curve 38
- 5.2 Factors which regulate population size 39
 - 5.2.1 Types of regulation 39
 - 5.2.2 Space 41
 - 5.2.3 Food and water 42
 - 5.2.4 Territories 43
 - 5.2.5 Herbivores and predators 44
 - 5.2.6 Weather and climate 45
 - 5.2.7 Parasites and diseases 45
 - 5.2.8 Natural disasters 46
 - 5.2.9 Self-regulation and stress 47
- 5.3 Patterns in population dynamics 48

Chapter 6 Ecological genetics

- 6.1 The importance of genetics to ecology 51
 - 6.1.1 The source of variation 51
 - 6.1.2 Genetic and environmental variation 51
 - 6.1.3 The role of variation in natural selection 51
- 6.2 Reproductive systems 52
 - 6.2.1 Formation of genetic variation 52
 - 6.2.2 Obligate cross-fertilisation 53
 - 6.2.3 Facultative cross-fertilisation 53
 - 6.2.4 Self-fertilisation 53
 - 6.2.5 Seed apomixis 54
 - 6.2.6 Vegetative reproduction 55
- 6.3 Genetic consequences of different reproductive systems 55
 - 6.3.1 The source of inherited chromosomes 55
 - 6.3.2 The consequences of outcrossing 55
 - 6.3.3 The consequences of self-fertilisation 56
 - 6.3.4 The consequences of asexual reproduction 57

- 6.4 Patterns of genetic variation 58
 - 6.4.1 External influences on genetic variation 58
 - 6.4.2 Founder effects and bottlenecks 58
 - 6.4.3 Isolation of populations 59
 - 6.4.4 Rosters and ecoclines 59
- 6.5 Genetic variation within an organism 63

Chapter 7 Behavioural ecology

- 7.1 What is behavioural ecology? 64
- 7.2 Optimisation theory 64
- 7.3 Optimal foraging 64
 - 7.3.1 Optimal foraging in crows 64
 - 7.3.2 Foraging in African elephants 65
 - 7.3.3 Optimal foraging in plants 66
- 7.4 Growth versus reproduction 68
- 7.5 Reproducing only once versus reproducing several times 68
- 7.6 Parental care 69
 - 7.6.1 Offspring size 69
 - 7.6.2 Which sex looks after the offspring? 69
- 7.7 Breeding systems in plants 70
- 7.8 Alternative strategies 71
- 7.9 Games theory 72
- 7.10 Constraints on adaptation 74
 - 7.10.1 Time lags 75
 - 7.10.2 Historical constraints 75
 - 7.10.3 Lack of genetic variation 76

Chapter 8 Sociobiology

- 8.1 Living in groups 77
- 8.2 The advantages of group living 77
 - 8.2.1 Less risk of predation 77
 - 8.2.2 More chance of obtaining food 78
 - 8.2.3 Other advantages of group living 78
- 8.3 Disadvantages of group living 79
- 8.4 Optimal group size 80
- 8.5 Evolution of helping behaviour 80
 - 8.5.1 Kin selection 80
 - 8.5.2 Reciprocal altruism 81
 - 8.5.3 Group selection 83
- 8.6 The unit of selection and social behaviour 83
 - 8.6.1 Termites 83
 - 8.6.2 Army ants 84
 - 8.6.3 Lions 86
 - 8.6.4 Naked mole rats 88
- 8.7 Human sociobiology 89
 - 8.7.1 Parental investment in the later mediaeval Portuguese nobility 90
 - 8.7.2 Helping behaviour in humans 91

Chapter 9 The environment

- 9.1 What is the environment? 92
- 9.2 The physical environment 93

- 9.2.1 The composition of the physical environment 93
- 9.2.2 Geology and soil 93
- 9.2.3 Topography 96
- 9.2.4 Latitudinal light and temperature variation 97
- 9.2.5 Climate and weather 97
- 9.2.6 Catastrophes 101

9.3 The biotic environment 101

- 9.3.1 Types of interaction 101
- 9.3.2 Intraspecific relationships (within species) 101
- 9.3.3 Interspecific relationships (between species) 102

9.4 Biotic and abiotic interactions 103

- 9.4.1 The complexity of the environment 103
- 9.4.2 Pathogens and climate 103
- 9.4.3 Abiotic effects on competition 104

Chapter 10 Habitats and niches

- 10.1 Habitats 106
- 10.2 Niches 106
 - 10.2.1 Determining niches 106
 - 10.2.2 Each species has its own unique niche 108
- 10.3 Gause's competitive exclusion principle 110
- 10.4 Species coexistence 112
 - 10.4.1 Size ratios in closely related species 112
 - 10.4.2 Niche overlap and species coexistence 113
- 10.5 Fundamental and realised niches 113
- 10.6 Resource partitioning 114
- 10.7 Character displacement 116
- 10.8 Interspecific competition in natural communities 116
- 10.9 Do plants need niches? 118
- 10.10 Community structure of fish on coral reefs 119

Chapter 11 Trophic levels

- 11.1 Why study trophic levels? 120
- 11.2 Autotrophs 120
 - 11.2.1 Photoautotrophs 120
 - 11.2.2 Chemoautotrophs 121
- 11.3 Decomposers 122
 - 11.3.1 Decomposition on the forest floor 123
 - 11.3.2 Decomposition of dead plant matter 124
- 11.4 Herbivores and carnivores 125
- 11.5 Omnivores 126
- 11.6 Food chains 126
- 11.7 Food webs 128
- 11.8 Pyramids of numbers 129
- 11.9 Pyramids of biomass 130

Chapter 12 Energy transfer

- 12.1 Energy and disorder 132
- 12.2 Primary production in terrestrial communities 132
- 12.3 Primary production in aquatic communities 136
- 12.4 The capture of light by plants 136
- 12.5 Efficiencies in ecology 137
- 12.6 Energy flow in natural communities 137
 - 12.6.1 Odum's (1957) study at Silver Springs, Florida 138
 - 12.6.2 Teal's (1962) study at a salt marsh in Georgia 138
 - 12.6.3 Varley's (1970) study of Wytham Wood, Oxford 140
- 12.7 The efficiency of energy transfer in ecosystems 142
- 12.8 Pyramids of energy 144

Chapter 13 Nutrient cycling and pollution

- 13.1 The pattern of nutrient transfer and its connection with pollution 147
- 13.2 The carbon cycle 148
- 13.3 The greenhouse effect 149
- 13.4 The nitrogen cycle 152
- 13.5 The phosphorus cycle 155
- 13.6 Interactions between the nutrient cycles 155
- 13.7 The importance of nutrient availability 156
 - 13.7.1 The response of organisms to nutrient availability 156
 - 13.7.2 China clay waste tips 157
 - 13.7.3 Nutrient cycling in tropical forests 158
- 13.8 Pollution 158
 - 13.8.1 Different forms of pollution 158
 - 13.8.2 Eutrophication 159
 - 13.8.3 Heavy metal toxicity 160
 - 13.8.4 Alkaline wastes 161
 - 13.8.5 Acid rain 161
 - 13.8.6 Pesticides 163
 - 13.8.7 CFCs and the ozone layer 165
 - 13.8.8 Radioactivity 166

Chapter 14 Communities

- 14.1 The community concept 168
 - 14.1.1 Definitions 168
 - 14.1.2 Recognition of communities 168
- 14.2 The structure of communities 168
 - 14.2.1 The investigation of communities 168
 - 14.2.2 Oak woodland communities 169
 - 14.2.3 Marine rock pools 172
 - 14.2.4 Mammalian gut communities 174
- 14.3 Global distribution of terrestrial communities 178
- 14.4 Patterns of diversity 181
 - 14.4.1 Global diversity 181

- 14.4.2 Species richness in a community 181
- 14.4.3 Stability-diversity relationships 183
- 14.4.4 The global cline 184

Chapter 15 Ecosystems

- 15.1 The first use of ecosystem 187
- 15.2 Soils 187
 - 15.2.1 The structure of soils 187
 - 15.2.2 The great soil groups 190
 - 15.2.3 The effect of vegetation on soil – two case studies 194
- 15.3 Wetland and aquatic ecosystems 196
 - 15.3.1 Water – the important factor 196
 - 15.3.2 Types of wetlands 197
 - 15.3.3 Marine wetland ecosystems 197
 - 15.3.4 Floodland ecosystems 198
 - 15.3.5 Swamp and marsh ecosystems 199
 - 15.3.6 Bog ecosystems 200
 - 15.3.7 Aquatic ecosystems 201
- 15.4 Inter-relationships of ecosystems 204

Chapter 16 Succession

- 16.1 Vegetation changes 206
- 16.2 The causes of change 207
- 16.3 Examples of primary seres 208
 - 16.3.1 Xeroseres 208
 - 16.3.2 Hydroseres 210
- 16.4 Patterns of succession 211
 - 16.4.1 Variation in seres 211
 - 16.4.2 The end of the succession 212
 - 16.4.3 Diverted seres 213
- 16.5 Human influence on succession 215

Chapter 17 Biomes

- 17.1 How many biomes are there? 217
- 17.2 The world's terrestrial biomes 217
 - 17.2.1 Tropical rainforest 217
 - 17.2.2 Elfinwood 219
 - 17.2.3 Tropical seasonal forest 219
 - 17.2.4 Tropical broad-leaved woodland 219
 - 17.2.5 Thornwood 219
 - 17.2.6 Temperate rainforest 219
 - 17.2.7 Temperate deciduous forest 220
 - 17.2.8 Temperate evergreen forest 220
 - 17.2.9 Temperate woodland 221
 - 17.2.10 Temperate shrubland 221
 - 17.2.11 Boreal forest 221
 - 17.2.12 Savannah 222
 - 17.2.13 Temperate grassland 223
 - 17.2.14 Alpine shrubland 224
 - 17.2.15 Alpine grassland 224
 - 17.2.16 Tundra 224
 - 17.2.17 Warm semi-desert scrub 225
 - 17.2.18 Cool semi-desert 225

- 17.2.19 Arctic-alpine semi-desert 225
- 17.2.20 Desert 225
- 17.2.21 Arctic-alpine desert 227
- 17.3 Wetland and freshwater biomes 227
 - 17.3.1 Cool temperate bog 227
 - 17.3.2 Tropical freshwater swamp forest 227
 - 17.3.3 Temperate freshwater swamp forest 227
 - 17.3.4 Lakes and ponds 227
 - 17.3.5 Streams and rivers 228
- 17.4 Coastal and marine biomes 228
 - 17.4.1 Marine rocky shore 228
 - 17.4.2 Marine sandy beach 229
 - 17.4.3 Marine mud flat 230
 - 17.4.4 Temperate salt marsh 230
 - 17.4.5 Mangrove swamp 230
 - 17.4.6 Coral reef 230
 - 17.4.7 Marine surface pelagic 231
 - 17.4.8 Marine deep pelagic 232
 - 17.4.9 Continental shelf benthos 232
 - 17.4.10 Deep ocean benthos 233

Chapter 18 Biogeography

- 18.1 Species distribution – where and why? 235
- 18.2 The historic effects of plate tectonics 236
 - 18.2.1 Past continental movements 236
 - 18.2.2 Present patterns of biogeography 239
- 18.3 Island biogeography 241
 - 18.3.1 The fascination of islands 241
 - 18.3.2 Colonisation of isolated islands 241
 - 18.3.3 The equilibrium theory 244
 - 18.3.4 Evolution on islands 245
 - 18.3.5 Mountain islands 249

Chapter 19 Co-evolution

- 19.1 The different grades of co-evolution 252
- 19.2 Pairwise co-evolution 253
 - 19.2.1 General aspects of one-on-one relationships 253
 - 19.2.2 The ant-acacia example 255
- 19.3 Diffuse co-evolution 256
 - 19.3.1 Co-evolution between groups of species 256
 - 19.3.2 The mammalian predator-prey example 257
 - 19.3.3 The Red Queen hypothesis 258
- 19.4 Insect pollination 258
 - 19.4.1 Angiosperm-pollinator relationships 258
 - 19.4.2 The early evolution of insect pollination 261
 - 19.4.3 Orchids and Hymenoptera 262
- 19.5 Introduced species 263

Chapter 20 Conservation principles

- 20.1 Biology is not enough 268
- 20.2 The need for conservation 268
 - 20.2.1 The pressure on wildlife 268
 - 20.2.2 Maintaining biodiversity 269
- 20.3 The philosophical basis for conservation 269
 - 20.3.1 Ethical arguments 269
 - 20.3.2 Anthropocentric arguments 272
 - 20.3.3 The role of ecology 272
- 20.4 Conservation of species 273
 - 20.4.1 Why do species become extinct? 273
 - 20.4.2 Genetic diversity in rare species 273
 - 20.4.3 Captive breeding programmes 277
 - 20.4.4 Re-introductions 277
- 20.5 Conservation of ecosystems 279
 - 20.5.1 The importance of habitat conservation 279
 - 20.5.2 Design of nature reserves 280
 - 20.5.3 Maintenance of conservation areas 280
- 20.6 Conservation of the biosphere 283

Chapter 21 Conservation in practice

- 21.1 The realities of attempting conservation 284
- 21.2 Conservation of species 284
 - 21.2.1 The golden lion tamarin – a successful re-introduction 284
 - 21.2.2 The African elephant – protective legislation 285
 - 21.2.3 The tiger – teetering on the edge of extinction 286
 - 21.2.4 Northern spotted owl – habitat destruction 287
 - 21.2.5 Spreading avens – habitat management 288
 - 21.2.6 *Partula* snails – captive breeding 289
- 21.3 Conservation of ecosystems 290
 - 21.3.1 Different models of conservation 290
 - 21.3.2 UK legislation 291
 - 21.3.3 Tropical rainforest 292
 - 21.3.4 Wetlands 293
- 21.4 Conservation of the biosphere 296
 - 21.4.1 The greenhouse effect 296
 - 21.4.2 Conserving the seas 298
- 21.5 What can individuals do? 300
