

Outline Studies in Biology

Brain Biochemistry

Second Edition

H.S. Bachelard

Contents

1	Introduction	7
1.1	Regional cerebral metabolism	8
1.2	Cerebral requirements for glucose and oxygen	9
	<i>References</i>	10
2	Appearance of the brain	11
2.1	Gross appearance	11
2.2	Fluid compartments	13
2.3	Microscopic appearance	14
2.3.1	Neurones	15
2.3.2	Glial cells	16
2.3.3	The synapse	17
	<i>References</i>	21
3	Neurotransmission	21
3.1	The resting potential	21
3.2	The sodium pump	23
3.3	The action potential and nerve conduction	24
3.4	Chemical events at the synapse	26
3.4.1	Identification and occurrence of neurotransmitters	28
3.4.2	The quantum hypothesis	32
3.4.3	Metabolism of acetylcholine	34
3.4.4	Catecholamines: noradrenaline and dopamine	37
3.4.5	5-Hydroxytryptamine	38
3.4.6	Breakdown of the biogenic amines	39
3.4.7	Metabolism of the neuroactive amino acids	40
3.4.8	The neuroactive peptides	40
3.5	Origin of synaptic vesicles	41
3.6	Post-synaptic events	42
3.6.1	Involvement of cyclic nucleotides	44
3.6.2	Receptors	46
3.7	Neurone-axonal transport	48
3.7.1	Mechanism of transport in axoplasmic flow	49
3.7.2	Axonal protein synthesis	50
	<i>References</i>	51
4	Adaptive processes in the brain	54
4.1	Inducible enzymes	54
4.1.1	Adaptation to specific substrates	56
4.1.2	Adaptation to the product of an alternate pathway	61

4.1.3	Adaptation involving coenzyme	62
4.1.4	Adaptation in response to hormones	63
4.2	Adaptation to the environment	65
4.2.1	Light	65
4.2.2	The pineal gland	66
4.3	Drug tolerance and dependence	68
4.3.1	Morphine	69
4.3.2	Amphetamines	71
4.3.3	Ethanol	74
4.4	Learning and memory as adaptive processes?	75
	<i>References</i>	76
	Index	79
