Contents

1.	The nature and significance of degradative processes	page 7
1.1	Introduction	7
1.2	Functions and significance of degradative processes	7
	Bibliography	14
2	Methods and problems in the study of turnover; a very brief survey	15
3	The chemistry of biological macromolecules and their degradation	17
3.1	The structure of nucleic acids	17
3.2	Nucleases	20
3.3	Proteins	21
3.4	Proteinases	22
3.5	Carbohydrates	25
3.6	Glycosidases	25
3.7	Lipids	28
3.8	Lipases	29
	Bibliography	30
4	Lysosomes; a specialized degradative organelle in eukaryotic cells	31
4.1	Characteristics of lysosomes	31
4.2	The dynamics of the lysosomal system	42
4.3	Degradative roles of lysosomes	49
	Bibliography	54
5	Characteristics of degradation in living cells	55
5.1	Protein degradation	55
5.2	Limited cleavage of proteins	58
5.3	Degradation in vivo of other macromolecules	61
5.4	Limited degradation of macromolecules other than proteins	63
5.5	Turnover of organelles and cells	64
5.5.1	Plasma membrane	64
5.5.2	Cytosol	65
5.5.3	Endoplasmic reticulum	65
5.5.4	Mitochondria	66

5.5.5	Lysosomes	66
5.5.6	Peroxisomes	67
5.5.7	Secretory vesicles	67
5.5.8	Ribosomes	67
5.5.9	Intracellular degradation during erythrocyte maturation	68
5.5.10	Degradation of cells during normal maintenance of organs, and in developmental processes	68
	Bibliography	68
6	Mechanisms and control of cellular degradation	69
6.1	Mechanisms for selectivity of degradation	69
6.2	On the control of turnover	73
	Bibliography	78
	Index	79
