

CELL BIOLOGY

SIXTH EDITION

DeROBERTIS

CONTENTS

Part One

INTRODUCTION TO CELL BIOLOGY

Chapter One

INTRODUCTION. HISTORY AND GENERAL CONCEPTS OF CELL BIOLOGY..... 3

Levels of Organization in Biology.....	3
Limits and Dimensions in Biology	4
Summary: Levels of Organization.....	7
History of Cell Biology.....	7
Cell Theory.....	7
Cytology and Genetics: Cytogenetics.....	8
Cytology and Physiology: Cell Physiology.....	9
Cytology and Biochemistry: Cytochemistry	9
Ultrastructure and Molecular Biology	10
Literary Sources in Cell Biology	11
References	11
Additional Reading	11

Chapter Two

GENERAL STRUCTURE OF THE CELL 13

Prokaryotic Cells.....	13
The Bacterial Cell	13
The Smallest Mass of Living Matter.....	14
Eukaryotic Cells.....	15
Shape	15
Size.....	16
Structure of the Living Cell.....	16
Structure of Fixed Cells.....	18
Summary: General Cell Structure.....	21
The Nucleus and Chromosomes.....	22
The Cell Cycle.....	22
Morphology of the Nucleus.....	23
General Structure of the Interphase Nucleus.....	23
Mitosis and Meiosis.....	25

Mitosis	25
Meiosis	25
Chromosomes	28
Morphology	28
Summary: The Nucleus and Cell Division	31
Summary: Prokaryotic and Eukaryotic Cells	32
References	33
Additional Reading	33

Part Two

MOLECULAR COMPONENTS AND METABOLISM OF THE CELL

Chapter Three

CHEMICAL COMPONENTS OF THE CELL 37

Molecular Population of the Cell	37
Water, Free and Bound	37
Salts and Ions	38
✓ Macromolecules	38
✓ Amino Acids and Proteins	38
✓ Electrical Charges of Proteins	43
✓ Carbohydrates	44
- Complex Polysaccharides and Glycoproteins	44
✓ Lipids	46
Summary: Cellular Chemistry	48
Nucleic Acids	49
Chemical Composition	49
The Structure of DNA	51
The Watson-Crick Model	51
Denaturation and Renaturation of DNA; Hybridization	53
Structure of RNA	55
Summary: Nucleic Acids	55
Additional Reading	56

Chapter Four

ENZYMES, BIOENERGETICS, AND CELL RESPIRATION 58

Enzymes	58
Specificity	59
Enzyme Activation; Co-factors	59
Active Site of the Enzyme	60
Enzyme Kinetics	61
Enzyme Inhibition	62
Isoenzymes	63
Allosteric Enzymes	63
Regulation of Enzyme Activity	64
Enzyme Interconversions	65
Cyclic AMP and Hormonal Control	66

CONTENTS

Summary: Enzymes in the Cell	67
Bioenergetics	69
Concept of Entropy	69
Cell Metabolism	70
Energy Cycle	70
Energy Transformation	71
Cell Respiration	73
Anaerobic Glycolysis	73
Aerobic Respiration	73
The Krebs Cycle	75
Respiratory Chain	75
Oxidative Phosphorylation	75
Summary: Bioenergetics and Cell Respiration	76
References	77
Additional Reading	77

Part Three

METHODS FOR THE STUDY OF THE CELL

Chapter Five

INSTRUMENTAL ANALYSIS OF BIOLOGICAL STRUCTURES..... 81

Resolving Power of the Microscope.....	81
Methods for Increasing Contrast	82
Phase Microscopy	82
Interference Microscopy	85
Darkfield Microscopy	86
Polarization Microscopy	86
Electron Microscopy	88
X-ray Diffraction	94
Summary: Microscopy	97
References	99
Additional Reading	99

Chapter Six

METHODS FOR CYTOLOGIC AND CYTOCHEMICAL ANALYSIS 101

Examination of Living Cells	101
Fixation	103
Embedding and Sectioning	105
Cytologic Staining	105
Summary: Observation of Living and Fixed Cells	108
Histochemistry and Cytochemistry	109
Cell Fractionation Methods	109
Zonal Centrifugation	112
Microchemistry and Ultramicrochemistry	112
Cytochemical and Histochemical Staining Methods	113
Histochemical Methods Based on Physical Determinations	119

CONTENTS

Summary: Cytochemistry	125
References	127
Additional Reading	129

Part Four UNITS OF STRUCTURE AND THE PLASMA MEMBRANE

Chapter Seven

ELEMENTARY UNITS OF STRUCTURE IN BIOLOGICAL SYSTEMS	133
--	------------

Elementary Structures and Their Function	133
Principles in the Assembly of Macromolecules	134
Summary: Assembly of Macromolecules	137
Elementary Membranous Structures	139
Summary: Artificial Membrane Systems	143
References	143
Additional Reading	144

Chapter Eight

THE PLASMA MEMBRANE	145
----------------------------------	------------

Isolation of the Plasma Membranes	145
Chemical Composition	145
Summary: Chemistry of the Plasma Membrane	149
Structure of the Plasma Membrane	149
Summary: Structure of the Plasma Membrane	151
The Fluid Mosaic Model of Membrane Structure	156
Summary: The "Fluid Mosaic" Model	158
Differentiations at the Cell Surface	158
Coats of the Cell Membrane	164
Glycocalyx	164
Summary: The Cell Surface	166
References	166
Additional Reading	168

Part Five THE CYTOPLASM AND CYTOPLASMIC ORGANELLES

Chapter Nine

THE CYTOPLASM AND VACUOLAR SYSTEM	171
--	------------

Cytoplasmic Matrix	171
Properties of the Cytoplasmic Matrix	173
Summary: Cytoplasmic Matrix	175
Cytoplasmic Vacuolar System	175
General Morphology of the Vacuolar System	176

CONTENTS

Summary: Cytoplasmic Vacuolar System	181
Fractionation of the Vacuolar System	181
Summary: Microsomal Fraction	185
Summary: Endoplasmic Reticulum	188
Golgi Complex	188
Isolation of the Golgi Complex	193
Summary: Isolation of the Golgi Complex	197
References	198
Additional Reading	199

Chapter Ten

MITOCHONDRIA 200

Morphology	200
Distribution	201
Summary: Nature of Mitochondria	203
Structure	203
Summary: Structure of Mitochondria	210
Isolation of Mitochondria and Mitochondrial Membranes ...	210
Summary: Isolation of Mitochondria	214
Molecular Structure and Function	214
Summary: Energy Transduction in Mitochondria	218
Permeability of Mitochondria	219
Summary: Other Functions of Mitochondria	223
Mitochondria as Semiautonomous Organelles	224
References	228
Additional Reading	229

Chapter Eleven

THE PLANT CELL AND THE CHLOROPLAST 231

Characteristics of Plant Cells	231
Summary: Characteristics of Plant Cells	237
Plastids	237
Chloroplasts	238
Summary: Plastids	243
Photosynthesis	244
Summary: Photosynthesis and the Chloroplast	250
References	252
Additional Reading	254

Part Six

CELLULAR BASIS OF CYTOGENETICS

Chapter Twelve

THE INTERPHASE NUCLEUS AND THE CHROMOSOMES 257

The Nuclear Envelope and Nuclear Permeability	257
Summary: The Nuclear Envelope	261

Ultrastructure of the Interphase Nucleus	261
The Nucleolus	263
Ribonucleoprotein Structures	266
Heterochromatin and Satellite DNA	268
Summary: Organization of the Interphase Nucleus	271
References	272
Additional Reading	273
 Chapter Thirteen	274
MITOSIS	
Mitosis	274
Summary: Events in Mitosis	277
Condensation Cycle of Chromosomes	277
Summary: Structure of the Chromosome	280
Fine Structure and Functional Role of the Mitotic Apparatus	281
Cytokinesis in Plant Cells	287
Summary: The Mitotic Apparatus	289
References	290
Additional Reading	291
 Chapter Fourteen	292
MEIOSIS	
Analysis of Meiosis	293
Meiotic Division I	294
Meiotic Division II	300
Summary: Events in Meiosis	300
Synaptonemal Complex and Recombination	302
Summary: The Synaptonemal Complex	305
Giant Chromosomes	305
Summary: Giant Chromosomes	310
References	310
Additional Reading	311
 Chapter Fifteen	312
CYTOGENETICS. CHROMOSOMAL BASES OF GENETICS	
Laws of Heredity	312
Linkage and Recombination	315
Summary: Fundamental Genetics	318
Chromosomal Changes	319
Changes in Chromosome Number	323
Summary: Variations in Chromosomes	326
Cytogenetic Effect of Radiation	327
Cytogenetic Action of Chemical Agents	330
Cytogenetics and Evolution	332
Summary: Mutagens, Mutations, and Evolution	333
References	334
Additional Reading	334

Chapter Sixteen	
SEX DETERMINATION AND HUMAN CYTOGENETICS	336
Sex Determination	336
Sex-linked Inheritance	342
Summary: Cytogenetics of Sex Determination	343
Human Cytogenetics	344
The Normal Human Karyotype	345
Abnormal Human Karyotypes	347
Summary: Aberrations of Human Chromosomes	351
References	352
Additional Reading	352

Part Seven
MOLECULAR BIOLOGY

Chapter Seventeen	
CYTOCHEMISTRY OF THE NUCLEUS, THE CELL CYCLE, AND DNA DUPLICATION	359
Cytochemistry of the Nucleus	360
DNA Content of the Nucleus	360
Summary: Chemistry of the Nucleus	364
DNA and the Cell Cycle	365
RNA Synthesis and the Cell Cycle	377
Protein Synthesis and the Cell Cycle	378
Summary: The Cell Cycle	379
References	382
Additional Reading	383

Chapter Eighteen	
RIBOSOMES: STRUCTURE AND BIOGENESIS	384
Chemical Composition	387
Summary: Structure and Composition of Ribosomes	389
Biogenesis of Ribosomes	391
Summary: Biogenesis of Ribosomes	401
References	402
Additional Reading	403

Chapter Nineteen	
PROTEIN SYNTHESIS AND MOLECULAR GENETICS	404
The Genetic Code	409
Summary: Molecular Genetics	411
Transcription of Genetic Information	412
Messenger RNA	412
Transfer RNA	417

CONTENTS

Summary: Transcription	421
Ribosomes and Protein Synthesis	422
Summary: Protein Synthesis	431
Genetic Regulation	432
Summary: Genetic Regulation	437
References	438
Additional Reading	439

Chapter Twenty

CELL DIFFERENTIATION AND CELLULAR INTERACTION 441

Nucleocytoplasmic Interrelations in Protozoa	442
Molecular Events in Amphibian Eggs	443
Mechanisms of Gene Expression	445
Summary: Cell Differentiation	447
Gene Regulation in Eukaryotes	448
Summary: Regulation of Genetic Information	455
Renewal of Cell Populations	457
Cellular Interaction	458
Summary: Intercellular Interactions	462
References	463
Additional Reading	464

Part Eight CELL PHYSIOLOGY

Chapter Twenty-one

CELL PERMEABILITY, ENDOCYTOSIS, LYSOSOMES, AND PEROXISOMES 471

Diffusion or Passive Permeability	472
Cell Permeability and Active Transport	474
Summary: Cell Permeability and Active Transport	479
Endocytosis	481
Pinocytosis	482
The Lysosome	485
Peroxisomes and Glyoxysomes (Microbodies)	492
Summary: Endocytosis, Lysosomes, and Peroxisomes	493
References	494
Additional Reading	495

Chapter Twenty-two

PRIMITIVE CELL MOVEMENTS. CILIA, CENTRIOLES, MICROTUBULES, AND MICROFILAMENTS 497

Cilia and Ciliary Motion	497
Basal Bodies (Kinetosomes) and Centrioles	501
Origin of Cilia, Basal Bodies, and Centrioles	507

Summary: Structure, Motion, and Origin of Cilia and Flagella	508
Microtubules	510
Summary: Properties of Microtubules	512
Cytoplasmic Streaming	513
Ameboid Motion	513
Microfilaments and Cell Motion	516
Summary: Cyclosis, Ameboid Motion, and Microfilaments	519
References	520
Additional Reading	521

Chapter Twenty-three

MOLECULAR BIOLOGY OF MUSCLE 523

Biochemistry of Muscle	529
The Sliding Theory of Muscle Contraction	531
Sarcoplasmic Reticulum	534
Summary: Molecular Biology of Muscle	537
References	539
Additional Reading	540

Chapter Twenty-four

CELLULAR AND MOLECULAR NEUROBIOLOGY 541

General Organization of a Neuron	542
Summary: General Organization of the Neuron	551
Synaptic Transmission	553
Molecular Biology of Receptors	564
Summary: Synaptic Transmission	569
References	571
Additional Reading	573

Chapter Twenty-five

CELL SECRETION 575

Summary: Secretion; Methods of Study	576
Morphology of the Secretory Cycle	577
Summary: Morphology of the Secretory Cycle	583
Cytochemistry of the Secretory Cycle	584
Summary: Cytochemistry of the Secretory Cycle	589
References	592
Additional Reading	592

INDEX 595
