

TABLE OF CONTENTS

PART I
CELLS AND CELL GROWTH

Chapter 1 Cell: an Introduction

Development of the Cell Discipline

Microscopy

Fundamentals of Light Microscopy and Transmission

Electron Microscopy

Preparation of Materials for Microscopy

Specialized Applications of Transmission Electron

Microscopy

The Scanning Electron Microscope

Phase Microscopy (Densitometry)

Cell Structure: A Preview

Eukaryotic Cells: The Generalized Animal Cell

Eukaryotic Cells: The Generalized Plant Cell

Prokaryotic Cells: Bacteria

Prokaryotic Cells: Blue-Green algae

Prokaryotic Cells: PPLO

Viruses

Structure of Viruses

Reproductive Cycle of a Virus

Classification of Viruses and the Nature of Viral Nucleic

Acids

Summary

References and Suggested Reading

Chapter 2

Cell Growth and Proliferation

1 The Population Growth Cycle

3 Exponential Growth

Generation Time

5 The Log Phase of Growth

8 The Stationary Phase

The Death (Declining) Phase

9 Contact Inhibition

18 The Quantitation of Cells

20 Optical Enumeration of Cells

23 Electronic Enumeration of Cells

24 The Continuous Culture of Cells

34 Synchronous Cell Culture

37 Synchrony by Induction

39 Synchrony by Selection

41 Culture Fractionation

41 The Growth of Individual Cells: The Cell Cycle

41 Phases of the Cell Cycle

Application of Radioactive Isotopes as Tracers in Cell Biology

- Advantages of the Radioisotope Technique
- Determination of Molecular Fluxes Under Conditions of Net Exchange
- Application of Chemical Analyses
- "Isotope Dilution" Methods
- Enzyme-Product Relationships
- Properties of Radioactive Isotopes

Types of Radiation Emitted by Radioisotopes	
Energy of Radiation and Its Interaction with Matter	
Half-life	
Detection and Measurement of Radiation	275
Geiger-Muller Counters	
Solid Scintillation Counters	275
Liquid Scintillation Counters	276
Autoradiography	277
Summary	277
References and Suggested Reading	278

PART 5 STRUCTURE AND FUNCTION OF THE MAJOR CELL ORGANELLES

Chapter 15 The Plasma Membrane

- Early Studies on the Chemical Organization of the Plasma Membrane
- Presence of Lipid in the Membrane
- Langmuir Trough
- Gorter and Grendel's Bimolecular Lipid Leaflet Model
- Danielli-Davson Membrane Model
- Sutton's Unit Membrane
- The Fluid-Mosaic Model of Membrane Structure
- Freeze-Fractured Membranes
- Membrane Proteins
- Peripheral (Extrinsic) Proteins
- Integral (Intrinsic) Proteins
- Asymmetric Distribution of Membrane Proteins
- Mobility of Membrane Proteins
- Catalytic Properties of Membrane Proteins
- Isolation and Characterization of Membrane Proteins
- Membrane Lipids
- Mobility of Membrane Lipids
- Lipid Asymmetry
- Membrane Carbohydrate
- Possible Function of Membrane Carbohydrate
- Lectins, Antibodies, and Antigens and the Plasma Membrane

Special Cell Surface Properties Revealed by Erythrocytes	
Intercellular Junctions and Other Specializations of the Plasma Membrane	
Passive Movements of Materials Through Cell Membranes	291
Osmosis and Diffusion Across Membranes	292
The Gibbs-Donnan Effect	292
Facilitated (Mediated) Diffusion through the Cell Membrane	293
Active Transport	294
The Na^+/K^+ Exchange Pump	298
Cotransport: The Electrogenic Pump	298
"Simple" Active Transport	300
Bulk Transport Into and Out of Cells	300
Endocytosis	300
Exocytosis	301
Summary	302
References and Suggested Reading	302

Chapter 16 The Mitochondrion

Discovery of Mitochondria	303
Structure of Mitochondrion	303
Tricarboxylic Acid Reactions	305

306

Oxidation-Reduction Reactions	348
Classes of Electron Transfer System Compounds	349
Electron Transport Pathway	350
Balance of Electrons from Glycolysis and TCA Cycle	
Metabolism	351
The Energetics of Electron Transport	352
Transport of Protons	352
Electron Transport Inhibitors	352
NAD(P)⁺ Transhydrogenases	353
Oxidative Phosphorylation	353
Molecular Events in Oxidative Phosphorylation	353
The Chemical-Coupling Hypothesis	355
The Conformational-Coupling Hypothesis	355
The Chemiosmotic-Coupling Hypothesis	357
Other Functions of Mitochondria	357
The Glyoxylate Cycle	357
Fatty Acid Oxidation	357
Fatty Acid Chain Elongation	357
Superoxide Dismutase and Catalase	358
Amphibolic and Anaplerotic Reactions	358
Permeability of the Inner Membrane	358
Cytosol-Matrix Exchange of NADH and NADPH	360
Total Energy Production from Catabolism of Glucose	360
Summary	362
References and Suggested Reading	

Chapter 17 The Chloroplast

Fine Structure of the Chloroplast	365
Structure of the Thylakoid	367
Stroma Structures	367
Chemical Composition of Chloroplasts	368
The Chlorophylls	369
The Carotenoids	371
Location and Arrangement of the Pigment	372
Development of Chloroplasts	374
Photosynthesis—Historical Background	375
Photosynthesis—Photochemical (Light) Reactions	375
The Absorption of Light by Chlorophyll	376
Primary Photochemical Events in Photosynthesis	376
Two Photosystems	377
Sequence of Energy (Electron) Flow	377
Redox Reactions	378

Chapter 18 Lysosomes and Microbodies

Lysosomes	
Structure and Forms of Lysosomes	
Formation and Function of Lysosomes	
Distribution of Lysosomes	
Lysosome Precursors in Bacteria	
Regulation of Lysosome Production	
Disposition and Action of the Lysosomes	
Microbodies	
Peroxisomes	
Glyoxysomes	
Summary	
References and Suggested Reading	

Chapter 19 The Cell Nucleus

Chromatin	
Structure and Function of Chromatin	

Chapter 18 The Golgi Apparatus

Structure of the Golgi Apparatus	
Origin of Golgi Structures	
Development of the Golgi Apparatus	
Functions of the Golgi Apparatus	
Cell-Specific Functions of the Golgi Apparatus	
Formation of the Plant Cell Plate and Secondary Walls	
Neurosecretions	
Interrelationship Between Golgi, Lysosomes, and Vacuoles	
Acrosome Development in Sperm	
Summary	
References and Suggested Reading	

419	Eucaryotic Ribosomes	463
420	Model of Eucaryotic Ribosomes	469
421	Free and Attached Ribosomes	469
421	Ribosomes of Organelles	474
425	Chloroplast Ribosomes	475
425	Mitochondrial Ribosomes	475
425	Protein Synthesis in Chloroplasts and Mitochondria	475
431	Mechanism of Protein Synthesis	475
431	Linearity and Direction of Polypeptide Chain Assembly	476
431	Processing and Structure of Transfer RNA	477
431	Activation of Amino Acids	481
434	Formation of the Initiation Complex	484
434	Chain Elongation	484
	Chain Termination	490
434	Polyribosomes (Polysomes)	491
436	Visualization of Translation	494
437	Co-Translational and Post-Translational Protein	498
437	Modification	498
438	Transfer RNA Specialization	500
438	Inhibitors of Protein Synthesis	502
439	Inhibitors of Both Prokaryotic and Eucaryotic Protein	502
439	Synthesis	502
440	Inhibitors Specific for Prokaryotes	503
440	Inhibitors Specific for Eucaryotes	503
441	Inhibitors of Organelar Protein Synthesis	503
441	Summary	503
441	References and Suggested Reading	504
443		505
449		

Chapter 22

Cilia, Flagella, Microfilaments, and Microtubules

	Distribution and Functions of Microfilaments	510
	Muscle Cells	510
	Cytokinesis	510
	Plasma Membrane Movement	510
453	Distribution and Functions of Microtubules	510
454	Centrioles	510
455	Cilia and Flagella	510
459	The Mitotic Spindle	510
460	Other Cell Movements	510
52	Summary	510
3	References and Suggested Reading	510

Chapter 23

Cell Differentiation and Specialization

Nucleocytoplasmic Relationships	528
<i>Serial Transplantation of Frog Embryo Nuclei</i>	528
<i>Experiments with Acetabularia</i>	529
Environmental Effects on Differentiation	531
Red Blood Cells	532
<i>Erythropoiesis</i>	532
Genetic and Molecular Basis of Erythrocyte Differentiation	533
Morphological and Physiological Specialization of Red Blood Cells	534
Muscle Cells	535
Muscle Contraction	539
Nerve Cells or Neurons	541
Action Potentials	542
<i>Ion Gradients Across the Membrane</i>	543
<i>Initiation of the Action Potential</i>	543
<i>Conduction of the Action Potential</i>	544
<i>Synaptic Transmission</i>	544
Summary	545
References and Suggested Reading
