

CURRENT CONCEPTS IN BIOLOGY SERIES

Cells and Energy

Richard A. Goldsby

Contents

1

An Introduction to the Language of Chemistry	1
Atoms and Molecules / The Sign Language of Chemistry / A Little About Molecular Structure / Some Biological Chemicals / Some Biologically Important Functional Groups / Acid-Base Relationships	

2

Energetics	22
Energy—Its Conservation and Conversion / Bioenergetics and ATP / The Functions of ATP / Oxidation—Reduction and Energy Production / Other High Energy Compounds	

3

Biocatalysis	30
Rates of Reaction and Catalysis / Proteins / Enzymes / The Control of Enzyme Activity	

4

ATP Production	46
Alcoholic Fermentation / Glycolysis / Respiration and Oxidative Phosphorylation / Compartmentation / Other Molecules as Energy Sources	

x Contents

5

Photosynthesis

64

The Photosynthetic Process / The Nature of Light / The Capture and Conversion of Light Energy / Electron Flow and Photosynthesis / Wavelength and Photosynthetic Electron Transport / The Path of Carbon in Photosynthesis

6

Energy and Biosynthesis

79

DNA—Its Function and Biosynthesis / RNA and Protein Synthesis / Polysaccharide Synthesis / Fat Synthesis / Summary

7

The Control of Cellular Metabolism

94

Control at the Instructional Level / Control at the Metabolic Level / Summary

Selected Readings

105

Index

109
