

FUNDAMENTALS OF SOIL SCIENCE

SIXTH EDITION

HENRY D. FOTH

CONTENTS

1 / Concepts of Soil 1

- General Definitions of Soil 2
- Soil as a Mixture of Materials 2
- Soils as Organized Bodies 5
- Soil as a Natural Resource 10
- Soil as the Interface Where We Live 12

2 / Soil as a Medium For Plant Growth 15

- Factors of Plant Growth 15
- Utilization of the Soil by Plants 19
- The Concept of Soil Productivity 22

3 / Physical Properties of Soils 25

- Soil Texture 25
- Soil Structure 36
- Soil Consistence 41
- Weight, Pore Space, and Air Relationships 42
- Effects of Tillage and Traffic on Soils and Plant Growth 48
- Soil Color 55
- Soil Temperature 57

4 / Soil Water 63

- Energy Concept of Soil Water 64
- Plant-Soil Water Relations 73
- Soil Moisture Regimes 83

5 / Soil Water Management 89

- Water Conservation 89
- Soil Drainage 97
- Irrigation 105

6 / Soil Ecology 123

- The Ecosystem 124
- Importance of Microorganisms as Decomposers 126
- Soil Animals as Consumers and Decomposers 131
- Nutrient Cycling 136
- Relation of Soil Organisms to Higher Plants 142
- Soil Organisms and Environmental Quality 147
- Use of Soil for Animal Waste Disposal 149
- Earth-Moving Activities of Soil Animals 151

7 / Soil Organic Matter 157

Humus Formation and Characteristics 157
Amount and Distribution of Organic Matter in Soils 160
Some Organic Matter Management Considerations 166

8 / Chemical and Mineralogical Properties of Soils 175

Chemical and Mineralogical Composition of the Earth's Crust 176
Weathering and Mineralogical Composition of Soils 177
Origin, Structure, and Properties of Clay Minerals 182
Cation and Anion Exchange in Soils 193

9 / Soil pH—Causes, Significance, and Alteration 201

Definition and Causes of Soil pH 201
Significance of Soil pH 206
Alteration of Soil pH 209
Nature and Management of Saline and Sodic Soils 219

10 / Soil Genesis and The Soil Survey 225

Horizon Differentiation and Soil Genesis 226
Soil Development in Relation to Time 230
Soil Development in Relation to Climate 232
Soil Development in Relation to Organisms 235
Soil Development in Relation to Parent Material 237

Soil Development in Relation to Topography 246
Human Beings as a Factor in Soil Formation 249
The Soil Survey 250

11 / Classification and Geography of the World's Soils 255

Soil Classification 255
Soil Orders—Properties, Distribution, and Use 256
Soil Classification Categories Below and Suborders 289

12 / Soils and Mineral Nutrition of Plants 293

The Essential Elements 293
Nutrient Deficiency Symptoms 294
Nutrient Uptake From Soils 298
Nitrogen 301
Phosphorus 311
Potassium 316
Calcium and Magnesium 321
Sulfur 322
Micronutrients 322

13 / Composition, Manufacture, and Use of Fertilizers 327

Fertilizer Materials 328
Mixed Fertilizers 335
Evaluation of Fertilizer Needs 339
Use and Application of Fertilizers 343
Fertilizer Use and Environmental Quality 349
Manure as a Fertilizer 352

**14 / Soils, Plant Composition,
and Animal Health 359**

- Factors Affecting Plant Composition 359
- Soils, Fertilizers, and Animal Health 364
- Other Soil-Animal Health Concerns 373

15 / Soil Erosion and Its Control 377

- Soil Erosion Defined 377
- Reasons for Employing Water
Erosion Control Practices 380
- Predicting Water Erosion Losses
on Agricultural Land 383
- Application of the Soil-Loss
Prediction Equation 387
- Wind Erosion 389

**16 / Soil Resources and
Population 395**

- Acreages of Producing and Potential
Cropland in the United States 396
- Acreages of Arable Land and
Land Requirements 398
- The Food and Population Problem
of the World 401

Appendix A

- Conversion factors for English and
Metric Units 407

Glossary 409

Index 428
