

Principles of Plant Breeding

R. W. Allard

گورنمنٹ ڈگری کالج برائے خواتین مظفر گڑھ

Class No. 631.53

Author No. All

Acc. No. 1208

Estd. Library 1973

Contents

Section One Introductory topics

chapter 1	Nature and goals of plant breeding	1
2	Patterns of evolution in cultivated species	7
3	Plant introduction and domestication	19
4	Reproductive systems in cultivated plants	31
5	Reproductive systems and plant breeding methods	43

Section Two Genetic basis of breeding self-pollinated crops

chapter 6	Selection under self-fertilization	50
7	Genetic consequences of hybridization	61
8	Quantitative inheritance	75
9	Roles of genotype and environment in continuous variation	88
10	Genetic components of continuous variation	99

Section Three Breeding methods with self-pollinated crops

chapter 11	Pure-line breeding and mass selection	109
12	Pedigree method of plant breeding	115
13	Bulk-population breeding	129
14	Backcross breeding	150

Section Four Genetic basis of breeding cross-pollinated crops

chapter 15	Theory of selection in populations of cross-pollinated crops	166
16	Responses to selection and the genetic organization of populations	182
17	Systems of mating and their genetic consequences	197
18	General features of inbreeding depression and heterosis	213
19	Genetic basis of inbreeding depression and heterosis	224
20	Systems of pollination control in crop plants	234

Section Five Breeding methods with cross-pollinated crops

chapter 21	Selection in cross-pollinated crops	252
22	Hybrid varieties	263
23	Recurrent selection	282
24	Synthetic varieties	303

Section Six Breeding for disease resistance

chapter 25	Variability systems of pathogenic fungi	323
26	Variability in disease reaction of host species	343
27	Breeding disease-resistant varieties	359

Section Seven Polyploidy in plant breeding

chapter 28	General features of polyploidy	370
29	Cytogenetics of aneuploids	377
30	Inheritance in autopolyploids	385
31	Cytogenetics of allopolyploids	400
32	Induced polyploidy in plant breeding	411

Section Eight Interspecific hybridization

- chapter 33 Cytology and genetics of interspecific hybrids 423
34 Interspecific hybridization in plant breeding 434

Section Nine Miscellaneous topics

- chapter 35 Mutation breeding 444
36 Distribution and maintenance
of improved varieties 455

Glossary 465

Index 473
